Sorry, can't for several reasons...

1) No doubt covered under copyright laws.

2) Heck of a lot of typing-article covered a quarter to a third of the page.

3) Article also had a large "table" of feature comparisons- would be
extremely difficult format to type.

I would be very surprised if it was not available at your local public
library for check out or photocopying...

The Span-Master was an excellent regenerative receiver for its time. It
not only boasted of band switching from the broadcast band to 30 MHz, it
also included a "fine" regeneration control that made those critical
peaking adjustments made easy. My buddy had one during the early 60's
and we had a blast listening to everything from am broadcast to C.B.

It was very well designed.

That is why it is sought after today.

New Orleans Military Boat Builder Moves Business to Gulfport.Northrop Recovering From Storm. www.MagnoliaReport.com

Windpower? On September 9 this month when I went to the Celticfest Mississippi Festival www.celticfestms.org I took a couple of pictures of a windmill generator I saw on the grounds of the Mississippi Agricultural and Forestry Museums.That is where Celticfest Mississippi has their annual Festivals.The windmill generator was mounted on a tallllllll steel tower and the three bladed propellar was slowly spinning around and around.I took two pictures (among a lot of other pictures I took of the Festival and the Museums) of the windmill generator and I sent them along with some more pictures and a Sunday Clarion Ledger newspaper and a Celticfest Mississippi T Shirt and a video of the Splenders Of Versailles exhibit that was in down town Jackson a few years ago.I snail mailed all of that stuff to that married Irish woman wayyyyyy over yonder across the big pond.At ground level,there wasen't the slightest breeze at all (there never is unless a storm is rolling through around here) at ground lever at Celticfest Mississippi,but wayyyy up there on top of that steel tower,that windmill generator was turning around and around,about one revolution every three seconds.As far as I know,that might be the only serious windmill generator here in Mississippi.

Get a motorcycle wheel and a auto/truck alternator at a junk yard and attach some kind of home made vanes to the wheel to catch the wind and mount that on a tower and there is your windmill generator.I have an old Mother Earth magazine here that has some plans in the magazine all about how to do that.Cheap and simple.

Robin, G4DVJ, and Chris, G8LVK, have put up on their Monitor Internet website their hardware mod for the Realistic/Radio Shack DX-394 for downconversion to a 12kHz 3rd IF for DRM and other sound card DSP demodulators such as SDRadio. A beautiful piece of work it is, too, both in execution and publication, incorporating the Sat-Schneider module. That prompted me to look over the other mods and I see some added illustrations, if not additional mods, since I last looked. The bhi DSP module installation is especially sweet, albeit pricey.

So if you have not visited their site in a while, do so, and be inspired! Its at
http://www.monitor.co.uk/radio-mods/dx-394/dx-394.htm#mods

Great job, guys!

73, Tom

18. Hate Bills are for Whiners...

Newsgroup: rec.radio.shortwave
Date: 2005-10-01 03:09:08 UTC
From: Cindy <BogusSpambotAddress@aol.com>
Message-ID: <aOKdnXsD2O5PYKDeRVn-pg@comcast.com>
Source record: 42280

Hate crimes give special rights to which ever group they're applied to and take away the rights of those not covered by the special laws... ie preferential treatment.

If someone doesn't like me because of my race, sex or automobile preferences who cares? That's their right. Hate me all you want. Now if they want to take physical action against me... Bring it on... I'll defend myself to the best of my ability and if not, i'll get beat up or killed. There are laws already on the books to cover either scenario.

Hate crimes are for people who can't make it in the real world on their own. It's called survival! If you can't take care of yourself, you will not survive. Don't sit back and expect the government to take care of you.

That reminds me of a guy that approached me on the subway in New York City one day.... He was begging for money of course and was younger and in better shape than I was...Well he kept on and finally his last ploy was...Can't you give me some money? I like to eat. I responded that I liked to eat too and that's why I was on my way to work... End of discussion...

By the way, any cry babies that want to come back at me do me a favor first. Go out and give all your money and worldly possesions to the the crack heads, drunks and other worthless people because I'm through giving, that is except the money that is extorted from me ie taxes. You help them all you want! Just leave me out of it.

* Note: Right Wing Radicals Are TOO Liberal For Me!

Possibly the dark side of free enterprise? in my opinion, based on what
I've seen, lawyers are kind of like people - most of them are decent, work
hard, earn their keep, and aren't rich. some are especially good citizens,
do pro-bono work, contribute to their community. Then some are only
interested in the bottom line.
>> The US has, arguably, the best justice system on earth. (I'm not saying

21. Things you learn from tv instead of swl about Katrina

Newsgroup: rec.radio.shortwave
Date: 2005-10-01 03:22:05 UTC
From: Dan <newsgroupemail99@yahoo.com>
Message-ID: <CIOdnWe_auJ_naPenZ2dnUVZ_s2dnZ2d@comcast.com>
Source record: 42283

Things I have learned from watching the news about Hurricane Katrina on TV when I could have been swl.

01. The hurricane only hit black family properties.

02. New Orleans was devastated and no other city was affected by the hurricane.

03. Mississippi is reported to have a tree blown down.

04. New Orleans has no white people.

05. The hurricane blew a limb off a tree in the yard of an Alabama resident.

06. When you are hungry after a hurricane steal big screen TV and Nike footwear.

07. The hurricane did 23 billion dollars in improvements to New Orleans, and now the city has no welfare recipients, looters, or gangs; they have moved
to your city.

08. White folks don't make good news stories.

09. Don't give thanks to the thousands that came to help rescue you, instead bitch because the government hasn't given you a debit card yet.

10. Only black family members got separated in the hurricane rescue efforts.

11. Ignore warnings to evacuate and the white folks will come get you and give you money for being stupid.

12. Damn, I feel so sorry for all those black folks.

13. Oh, and it is all George Bush's fault.

Next you'll want to go into our science classes and preach religion instead
of science. Oh wait, you're already doing that!

Any idea why US science student lag behind all other modern countries
(except fundamentalists ones of course)?

the frequency range it covers ,but more important than that the preamp has a much lower noise floor (the MFJs are the worst) than the other ones and its more stable,some of the others will break into oscillation in the upper end of the band .Thats just my oppinion after playing around with the others (except the Palstar ,I havent tried one of them yet,although its an active antenna not a preselector) .Thanks

Religion belongs in a house of worship not the public schools.

An auto alternator isn't very suitable. It has to turn around ten to
fifteen thousand rpm to make power..check out the pulley ratios in your
car. The field uses too much of the power, too. Permanent magnets are
much better for field supply.

One of the following sites has a homemade Volvo disk brake alternator
that is a good idea. No brushes or chains or belts or gears to add to
the maintenance.

They only seem to argue with the biologists, and not the physical scientitsts. It must be because, as Al Campanis would say, they lack some of the necessities (like an understanding of the required mathematics, physics, and chemistry). They are under the delusion that understanding biology does not require calculus, statistics, and quantum mechaniics.

Salt

Said

Roman,

You are correct in your assessment on what the world expected of the administration of the USA who have been telling us how things are done "correctly". This administration failed its own people as it has also failed the people in Iraq and Vietnam etc.

However the failure of your "system" is well known to most European Nations who did not join you in Iraq and in other places like South Vietnam who you left to the North.

"You" the majority voted your leader in to your White House and he is what you deserve to be judged by.

The world has judged you and we are now talking more about your racism and your failures to your own.

It seems there was not a dollar in saving your own so few of you were moved enough to do anything about your fellow man. This is your Bush USA.

I have a Popular Science magazine here (or maybe it's in one of my Popular Mechanics magazines) from earlier this year with an article about a wind pipe someone is expeimenting with.The pipe tapers smaller toward the middle section of the pipe (venturi effect) than at the ends of the pipe.The wind going through either end of the pipe speeds up and spins a generator in the middle section of the pipe,according to the article in the magazine.It is nothing but a big pipe with a generator in the middle of the pipe.Stick a big kite way up in the air/wind,let the tether line tug on some gears and spin a generator.

You have rights, and your rights can be and should be preached at home or at church. School should be about learning math, english, geography, etc. Not about how God made Eve from Adam's rib.

Consevatives complain so much about how government is so bad at doing things, and yet they beg to have them in the religion teaching business. So contradictory.

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

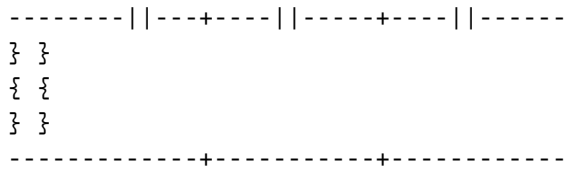
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

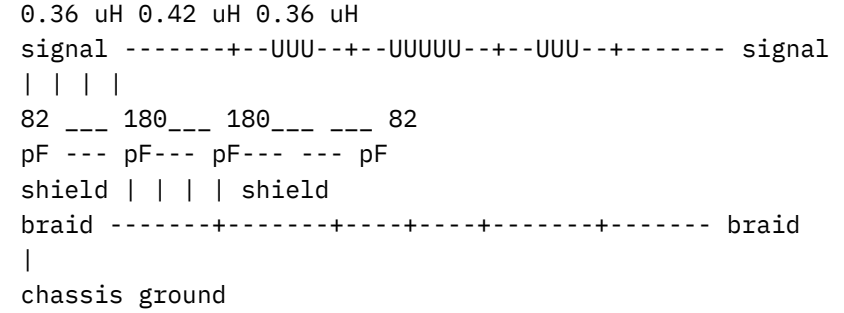
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

43. What radio to buy in the UK

Newsgroup: rec.radio.shortwave
Date: 2005-10-01 08:28:31 UTC
From: Christian Hansen <chrishansenhome@notrash.btinternet.com.invalid>

I'm an old DXer who has been thinking of getting back into it in recent years. I used to live in the US, as most people in this ng do. However, I've been in the UK for the past 12 years and am likely to stay here.

What I'm looking for is a good SW radio available in the UK that will give me the same kind of quality that, say, the Sony 2010 did. I had one of these when I moved here; however, it's given up the ghost and I suspect that it's unrepairable by now and am not minded to try.

So, any suggestions? Remember, I'm in the UK so suggestions for radios available in the US probably won't work for me.

I used to be very active in many of the old radio clubs in the US and some may remember my name. However, with all the noise in this ng, it'll be a wonder if anyone can actually read this post.

Well, I think the Sony 2010 still is the most impressive portable of all
time.
The likelihood is that all that is wrong with it are a couple of front end
FET's blown.
It's well worth trying to repair.
You have some top class radio outfits in the UK:
Waters & Stanton http://www.wsplc.com/ who have a very comprehensive
website.
Martin Lynch
Haydon Communications and a couple of others.
A search through some of the UK magazines like Short Wave Listener, Radio
Active, Short Wave Magazine and others
may reveal further leads.
They have experts who will offer you good advice.
I would think a Sony 7600GR would be a good replacement for a 2010 if you
can't get it fixed, which you should try first.

Nice to see someone has gone into this in depth..
I have my old Racal RA 17 L attached to a redundant line which runs from my home to a pole 30 mtrs away, where it is cut off. I get very good reception on it and treat it as my own personal long wire antenna. Fortunately the phone co. have a habit of leaving the old stuff in-situ when installing new lines !
Mike.

49. OT: Auditors say U.S. government-generated news stories are illegal

Of course, this ties into statutory restrictions on the interaction between the VOA and U.S. citizens and residents.

http://www.nytimes.com/2005/10/01/politics/01educ.html

October 1, 2005
Buying of News by Bush's Aides Is Ruled Illegal
By ROBERT PEAR

WASHINGTON, Sept. 30 - Federal auditors said on Friday that the Bush administration violated the law by buying favorable news coverage of President Bush's education policies, by making payments to the conservative commentator Armstrong Williams and by hiring a public relations company to analyze media perceptions of the Republican Party.

In a blistering report, the investigators, from the Government Accountability Office, said the administration had disseminated "covert propaganda" in the United States, in violation of a statutory ban.

The contract with Mr. Williams and the general contours of the public relations campaign had been known for months. The report Friday provided the first definitive ruling on the legality of the activities.

Lawyers from the accountability office, an independent nonpartisan arm of Congress, found that the administration systematically analyzed news articles to see if they carried the message, "The Bush administration/the G.O.P. is committed to education."

The auditors declared: "We see no use for such information except for partisan political purposes. Engaging in a purely political activity such as this is not a proper use of appropriated funds."

The report also sharply criticized the Education Department for telling Ketchum Inc., a public relations company, to pay Mr. Williams for newspaper columns and television appearances praising Mr. Bush's education initiative, the No Child Left Behind Act.

When that arrangement became public, it set off widespread criticism. At a news conference in January, Mr. Bush said: "We will not be paying commentators to advance our agenda. Our agenda ought to be able to stand on its own two feet."

But the Education Department has since defended its payments to Mr. Williams, saying his commentaries were "no more than the legitimate

dissemination of information to the public."

The G.A.O. said the Education Department had no money or authority to "procure favorable commentary in violation of the publicity or propaganda prohibition" in federal law.

The ruling comes with no penalty, but under federal law the department is supposed to report the violations to the White House and Congress.

In the course of its work, the accountability office discovered a previously undisclosed instance in which the Education Department had commissioned a newspaper article. The article, on the "declining science literacy of students," was distributed by the North American Precis Syndicate and appeared in numerous small newspapers around the country. Readers were not informed of the government's role in the writing of the article, which praised the department's role in promoting science education.

The auditors denounced a prepackaged television story disseminated by the Education Department. The segment, a "video news release" narrated by a woman named Karen Ryan, said that President Bush's program for providing remedial instruction and tutoring to children "gets an A-plus."

Ms. Ryan also narrated two videos praising the new Medicare drug benefit last year. In those segments, as in the education video, the narrator ended by saying, "In Washington, I'm Karen Ryan reporting."

The television news segments on education and on Medicare did not state that they had been prepared and distributed by the government. The G.A.O. did not say how many stations carried the reports.

The public relations efforts came to light weeks before Margaret Spellings became education secretary in January. Susan Aspey, a spokeswoman for the secretary, said on Friday that Ms. Spellings regarded the efforts as "stupid, wrong and ill-advised." She said Ms. Spellings had taken steps "to ensure these types of missteps don't happen again."

The investigation by the accountability office was requested by Senators Frank R. Lautenberg of New Jersey and Edward M. Kennedy of Massachusetts, both Democrats. Mr. Lautenberg expressed concern about a section of the report in which investigators said they could not find records to confirm that Mr. Williams had performed all the activities for which he billed the government.

The Education Department said it had paid Ketchum $186,000 for services performed by Mr. Williams's company. But it could not provide transcripts of speeches, articles or records of other services invoiced by Mr. Williams, the report said.

In March, the Justice Department's Office of Legal Counsel said that federal agencies did not have to acknowledge their role in producing

television news segments if they were factual. The inspector general of the Education Department recently reiterated that position.

But the accountability office said on Friday: "The failure of an agency to identify itself as the source of a prepackaged news story misleads the viewing public by encouraging the audience to believe that the broadcasting news organization developed the information. The prepackaged news stories are purposefully designed to be indistinguishable from news segments broadcast to the public. When the television viewing public does not know that the stories they watched on television news programs about the government were in fact prepared by the government, the stories are, in this sense, no longer purely factual. The essential fact of attribution is missing."

The office said Mr. Williams's work for the government resulted from a written proposal that he submitted to the Education Department in March 2003. The department directed Ketchum to use Mr. Williams as a regular commentator on Mr. Bush's education policies. Ketchum had a federal contract to help publicize those policies, signed by Mr. Bush in 2002.

The Education Department flouted the law by telling Ketchum to use Mr. Williams to "convey a message to the public on behalf of the government, without disclosing to the public that the messengers were acting on the government's behalf and in return for the payment of public funds," the G.A.O. said.

The Education Department spent $38,421 for production and distribution of the video news release and $96,850 for the evaluation of newspaper articles and radio and television programs. Ketchum assigned a score to each article, indicating how often and favorably it mentioned features of the new education law.

Congress tried to clarify the ban on "covert propaganda" in a bill signed by Mr. Bush in May. The law says that no federal money may be used to produce or distribute a news story unless the government's role is openly acknowledged.

Well, there is a tendancy for TV to cover the best and most easily available pictures (if it bleeds it leads) and for those with power and money to be able to better avoid some bad things. (if you don't have a car, you were much less likely to have evacuated well before the storm)

I believe in 1927, when there was a big flood on the Missippi, New Orleans, then having all the area power and wealth, opened some levees thus flooding rural areas with less power and wealth. It promised to compensate the rural areas but never did. There are also numerous stories from 1927, from various areas, of the poor, especially blacks, being treated much worse than the whites.

There's an article in Saturday's NY Times about small towns complaining that they're not getting coverage of damage.

http://www.nytimes.com/2005/10/01/national/nationalspecial/01flood.html

That was the end of his shrimping business, and his town too. "All everyone out there is worried about is Houston and New Orleans," he said, pulling on a cigarette. "We're sick of it. This storm hit Cameron Parish 10 times what it hit New Orleans, and nobody even knows it."

Your words, OM
"I sneaked over there next door and (she is gone somewhere
this evening) I looked through the windows of her camper,junk
scattered every which a way in there.
cuhulin"

You've picked up a few traits from the baboon (which to your credit, you like to bash) of doubling back on yourself when you get caught. Sort of how you like to say that you aren't racist but then toss out racial slurs.

I was too oblique with point 4. I was referring to the history Lott and Thurmond share. However, the fact that you stick up for scum like Thurmond says much about you. Maybe you and Bill Bennett can get together for some coffee?

Any and all fundamentalists are the same, i.e. psychotic.

Reality is the new religion.

Your recruiters are so desperate for people that seem willing to take in people without high school degrees. Is that the story with you and cuhulin? And then they release them back into society as anti-social misfits and sexual deviants with animal fetishes. Your military isn't worth the effort.

DOD: No New Rules Needed
Weeks before hurricane Katrina hit the Gulf coast, the Pentagon drafted new policies regarding the use of the military in the United States.

The drafts -- marked "For Official Use Only" and "Pre-Decisional" and obtained by this Washington Post blogger -- should put to rest concerns that there is a need to modify or repeal the Posse Comitatus Act to give the President more flexibility to employ the armed forces in any emergency.

There is no such need. The President already has all the flexibility he needs. But you wouldnï¿½t have known if from the cries for help this week.

First, Sen. John Warner (R.-VA) asked the Pentagon to review "the entire legal framework" governing the President's power to use active duty military forces in domestic roles.

Then Coast Guard Vice Adm. Thad Allen, the Katrina recovery commander, went on the record saying that "federalization without consultation" with state and local authorities may be needed in future disasters. "I'm talking about something you could do whether the state requests anything or not," he said.

Other Senate leaders have joined Warner in calling for a greater military role and changed standards. "The fear ï¿½ of federal military usurping state and local authority and, in the worst case, martial law ï¿½ has to give way to the reality of lives on the line," says Sen. Joseph Lieberman (D.-CT).

Warner, Allen, Lieberman, as well as Rumsfeld's spokesman Larry Di Rita, are all wrong. There is nothing that stands in the way of the military rendering emergency assistance, and what is more, if the President had wanted to fly in the 82nd Airborne even without State approval, he could have done so and the military could have taken his order without concern for its directives.

The problem with the response to Katrina was federal government incompetence and inattention, not any regulations or laws. Maybe these calls for changing the law are just a way of avoiding responsibility.

The two Defense Department documents, one a directive entitled Defense Support of Civil Authorities (PDF) and the other, an accompanying 190-page DoD Manual for Defense Support of Civil Authorities (PDF) are dated June 27.

They two documents make clear that the DOD's position is that the military can provide support to civil authorities, and even act as a lead agency in the face of a breakdown of civil command and control (the Allen scenario) in accordance with the National Response Plan and current law.

The policy drafts should also provide some comfort that Defense Department officials remain clear on the primacy of civilian authority and response. What is more, the new directives lay out strict "criteria" to assess whether the military should undertake civilian missions, specifically political and legal "appropriateness," "a clear end state," and no infringement on military readiness.

On March 25, 2003, then Deputy Secretary of Defense Paul Wolfowitz appointed former Congressman Paul McHale as the first Assistant Secretary of Defense for Homeland Defense. McHale was charged with overseeing DOD homeland defense activities and developing policies for support to civil authorities. His draft policies will replace an earlier 1997 Military Assistance to Civil Authorities directive and the 1994 DoD Manual for Civil Emergencies.

The two new draft documents update and streamline other existing directives and manuals relevant to homeland defense and support to civil authorities in light of reorganizations since 9/11, but substantively make no real changes to the policy that DOD "shall cooperate" with civil authorities consistent with "applicable laws, Presidential Directives, Executive Orders, and DOD directives."

On could argue that the Clinton era directive sets forth more rigorous criteria -- legality (compliance with laws), lethality (potential use of lethal force by or against DOD forces), risk (safety of DOD forces), cost (who pays and impact on DOD budget), appropriateness (whether the requested mission is in DODï¿½s interest to conduct), and readiness (impact on the DODï¿½s ability to perform its primary mission) -- but this as much reflects the previous administration's reluctance to use military force as it does some greater desire on the part of the military to take over today.

The new draft manual makes clear the military's role:

"First responsibility for support to the local incident response is with the State in which the disaster occurs. When State resources and capabilities are overwhelmed, Governors may request Federal assistance under a Presidential disaster or emergency declaration. Federal assistance is initiated when a disaster is so severe that a State's ability to provide response is overcome. ï¿½ The DoD Components shall not perform any function of civil government unless absolutely necessary on a temporary basis under conditions of Immediate Response. Any commander who is directed, or undertakes, to perform such functions shall facilitate the reestablishment of civil responsibility at the earliest time possible."

The draft directive states that "Any DoD Component or military commander may provide immediate response ï¿½ to save lives, prevent human suffering, or mitigate great property damage under imminently serious conditions."

Immediate response is defined as:

"Any form of immediate action taken by a DoD Component or military commander, under the authority of this Directive and any supplemental guidance prescribed by the Head of a DoD Component, to assist civil authorities or the public to save lives, prevent human suffering, or mitigate great property damage under imminently serious conditions. When such conditions exist and time does not permit approval from higher headquarters, local military commanders and responsible officials from the DoD Components and Agencies are authorized to take necessary action to respond to requests of civil authorities consistent with the Posse Comitatus Act (18 U.S.C. ï¿½ 1385) ï¿½ All such necessary action is referred to as 'Immediate Response.'"

The draft Manual states that "When guidance cannot be obtained from higher headquarters on a timely basis, due to attack on the United States or other emergency circumstances, the DoD Components should apply DoD resources to DSCA [defense support of civil authorities] in the following order of priority: To save human life and mitigate human suffering, and to protect essential U.S. Government capabilitiesï¿½"

The draft Manual does state that "The Secretary shall coordinate the Federal Government's resources utilized in response to or recovery from terrorist attacks, major disasters, or other emergencies" if and when any one of four conditions applies:

"A Federal department or agency acting under its own authority has requested the assistance of the Secretary;
The resources of State and local authorities are overwhelmed and Federal assistance has been requested by the appropriate State and local authorities;
More than one Federal department or agency has become substantially involved in responding to the incident; or
The Secretary has been directed to assume responsibility for managing the domestic incident by the President."
I guess one could take the final condition as ominous, but the conditions and authorities of the President in his constitutional role to order the military into action in an emergency are not any different from the pre 9/11 policies.

What is more, the new DOD directives exactly mirror the National Response Plan, which says on pages 42-43 (thanks KG):

"Imminently serious conditions resulting from any civil emergency may require immediate action to save lives, prevent human suffering, or mitigate property damage. When such conditions exist and time does not permit approval from higher headquarters, local military commanders and responsible officials from DOD components and agencies are

authorized by DOD directive and pre-approval by the Secretary of Defense, subject to any supplemental direction that may be provided by their DOD component, to take necessary action to respond to requests of civil authorities consistent with the Posse Comitatus Act (18 U.S.C. ï¿½ 1385). All such necessary action is referred to as 'Immediate Response.'"

Maybe readers will see something in these two documents that I don't see. But now we have Hurricane Rita to test my interpretation.

I doubt that we will see the President or other Congressional leaders claiming this time that the military can't respond quickly and appropriately. That's because this time they are paying attention.

9/11-PNAC, 9/11-PNAC
SHOULD BE THE #1 TOPIC OF DISCUSSION
A WAKE-UP CALL THE ALTERNATIVE AND LIBERAL MEDIA:
TO STOP IGNORING 9/11 AND THE PROJECT FOR A NEW AMERICAN CENTURY
Jesse, TvNewsLIES.org Editor, 12, July, 2005

We must open PNAC and 9/11 to public discourse because all roads may very well lead to or from 9/11.

9/11 is not the reason the Bush/PNAC agenda took shape, it is the excuse for implementing it.

9/11 gave these men everything they could possibly ask for including unlimited power to implement their otherwise unacceptable plans for global domination. Nothing else would have enabled them to go ahead with their plans. 9/11 was the greatest thing that ever happened to these men. If that does not make you suspicious, nothing will. What are the odds that all of this is nothing more than a historical coincidence? Do these facts, at the very least, merit public discourse?

EVERYBODY STOP WHAT YOU ARE DOING AND ONCE AND FOR ALL PAY ATTENTION TO THIS!!!
Unless the events of 9/11 are discussed openly and without apprehension, nothing else is real. When the people who benefited the most from the events of 9/11 were the very people responsible for preventing them, something is wrong. Since these people had ability to prevent, permit or conduct the events themselves, their collective and individual responses to the events must be examined and analyzed to the last detail. Anything less would be cowardice.

Even a rookie detective will tell you that motive and means are the keys to identifying suspects in a crime. The self-proclaimed goals of the Project for a New American Century (PNAC) clearly establish a more realistic and plausible motive to create a "new Pearl Harbor" than can be attributed to any Islamic extremist. As a matter of fact, the events of 9/11 were perhaps the most counterproductive factors in the history of Islamic progress. They resulted in an overwhelming backlash against the many Islamic people around the world.

Contrast the two motives. For the neocons in PNAC, 9/11 was a dream come true. Their dormant agenda now had an excuse for being implemented. On the other hand, the motive attributed to terrorists for the events of 9/11 was the laughable "they hate our freedom,ï¿½ ostensibly stemming from the teachings of Islam. In truth, such acts

would have violated the teachings of their religion and exponentially added a heavy burden to the daily life of every Muslim. This is not to say that there were no Al Qaeda types involved in the events of 9/11. It merely raises unanswered questions about what Al Qaeda really is and with whom their members work. And if they were actually involved in the events, what were the real reasons for their actions? Their motives, not those attributed to them, have to become part of the public discourse.

THE RESPONSE TO 9/11: We discuss the Iraq war as if the plans to invade Iraq were suddenly thought of on 9/11. We do the same with the Patriot Act. We do the same with the war in Afghanistan. We do the same for the continual assault on our Constitution. We do the same for the unprecedented rise in government secrecy (which actually started prior to 9/11, with Cheney's secret energy policy meetings). As a matter of fact, the administration is doing just about anything it wants, in secret, using the excuse of 9/11. This unlimited power is a dream come true for the PNAC cabal. The media constantly repeat the neocon mantra that 9/11 justifies all of this unchecked power. Nothing can be further from the truth.

9/11 is not the reason the Bush/PNAC agenda took shape, it is the excuse for its implementation. It was not a response to the events of 9/11. It was waiting in the wings for an event like 9/11 to breath life into it much like the bolts of lightening that brought life to the Frankenstein monster.

The members of the Project For a New American Century had their agenda prepared and published before they propped up an uniformed, inexperienced, failed businessman named George W. Bush as their poster candidate. He had great appeal among the good ole boys and the bible thumpers who were not very likely to vote for the scowling man behind the curtain, Dick Cheney. George W. Bush had not been sitting around for the previous 10 years thinking about foreign policy. Rather, he was being coached on foreign policy by handlers who had to teach him that Africa was a continent and not a country.

The stated aims of PNAC can be followed from their war plans to their hopes of global military superiority. George W. Bush was not a factor when PNAC was writing its openly published policies. But once the 2000 election was secured, PNAC members became and remain the mainstay of the Bush administration, holding virtually every major position relating to foreign policy.

However, to this day, PNAC has not been mentioned by any of our corporate news media. Most Americans have never heard of it, and few can name its members in positions of power in their own government. As a matter of fact the chairman of PNAC, William Kristol (Editor of the PNAC publication, the Weekly Standard), is a regular pundit offering analyses of Bush policies on FOX News. Never has Kristol been identified as having any connection to PNAC despite being one of the authors of our current foreign policy. He is regularly presented to

the public as an impartial journalist. In fact, not a single government spokesperson has ever been identified as a PNAC member. Talk about media deception!

When there is any discussion of Bush policy, from the Iraq War to the Patriot Act, we are told that 9/11 changed everything. This is nonsense. The most controversial acts of the Bush/PNAC administration were planned and held in abeyance prior to 9/11. The people who prepared the PNAC agenda did not think they had a chance in hell of their goals coming to fruition. Can you imagine the Patriot Act passing without 9/11 having taken place?

Reality check: The 800 + pages of the Patriot Act were written prior to 9/11. So were the plans to invade both Afghanistan and Iraq. But PNAC needed 9/11 to take place. They wanted 9/11 to take place. They wrote about 9/11 (their new Pearl Harbor) taking place. What makes you think they had absolutely nothing to do with 9/11 taking place?

As a matter of fact, the book The Grand Chessboard: American Primacy and Its Geostrategic Imperatives, by Zbigniew Brzezinski, published in 1998, basically blueprints everything that is going on today as it relates to the military primacy of the US and it's domination of the world. This is not new stuff. The Bush/PNAC administration is not responding to 9/11. They are in fact carrying out a pre-planned agenda made possible by 9/11.

FACT: We have an administration built around a group of people that has drawn members from previous administrations, many of whom were involved in crimes, lies, dirty tricks and warmongering. From the dirty tricks camp of Nixon to the crop of Iran-Contra felons, our administration is comprised of people who have treated our government and military as tools for their personal use. Add to that former members of the George H. W. Bush's administration and his and circle of friends. Remember that Daddy Bush hired a PR firm to create lies that would coerce Congress into attacking Iraq even after he had given Saddam a tacit nod to invade Kuwait. (That, by the way, was an impeachable offense). All these people were assembled and ready for action before they ever invited George W. Bush to run as their front man.

FACT: These men had an agenda, which is public and was published on their own website. This agenda was so radical that it would have take a very long time to implement unless there was, in their words, "some catastrophic and catalyzing event ï¿½ like a new Pearl Harbor." Do you think that the lives of a few thousand strangers were too high a price for them to pay for unlimited power? Do you think they were incapable of finding some way to proceed with an agenda that was otherwise destined to remain in the "unreachable/radical policy" file?

FACT: 9/11 gave these men everything they could possibly ask for including unlimited power to implement their otherwise unacceptable plans for global domination. Nothing else would have enabled them to

go ahead with their plans. 9/11 was the greatest thing that ever happened to these men. If that does not make you suspicious, nothing will. What are the odds that all of this is nothing more than a historical coincidence? Do these facts, at the very least, merit public discourse?

BELIEVABLE?: The failure of virtually every existing standard security procedure on 9/11 is so implausible that without active and wide spread interference there would be no way the events could have unfolded over the time period in question. Every agency with responsibility for our protection on the day of the events failed to follow procedure. Every one. This happening by accident is not only implausible but the mathematical odds are mind-boggling. Add in the PNAC motive factor and the odds of this being a coincidence become incalculable. Imagine having a government in place that was comprised of people who openly professed the benefits of a new Pearl Harbor on the day it actually occurred, and imagine that this has never been a topic of public discourse. No need to imagine because it it true.

THE LIBERAL/ALTERNATIVE MEDIA:

The so-called liberal media, along with a large segment of the alternative media, are playing a dangerous game. They are perpetuating a false reality in much the same way as our criminal corporate media. They claim to be the saviors of truth. They do discuss real issues that are omitted from the fairy tale reality portrayed by our corporate media. Election fraud, treason, blatant and numerous lies that led to war, convicted felons back in the White House (Iran Contra felons), and the dismantling of our Constitution are all important issues addressed in detail only by the liberal and alternative media.

While these issues are vital, they can not be discussed in isolation of the motives of the Project for a New American Century and the empowering payday they reaped from the events of 9/11. Omitting the 9/11-PNAC connection during these discussions perpetuates an incomplete reality of America and the world. Even the liberal and alternative media pretend that PNAC does not exist. PNAC is at the crux of every geopolitical event taking place today in this nation. The members of this organization have to be exposed and discussed and they have to be part of the American vernacular.

Those of you who have seen TvNewsLIES editorials regularly linked on other alternative news sites may notice a trend. Some sites, no matter how liberal, refuse to discuss 9/11 or PNAC and accordingly will not link to our editorials on these subjects. While those sites provide a great deal of information to the public and they are truly invaluable assets in our battle to preserve our democracy, they must join the discussion when it comes to the most important event of our lifetime and the controversial figures of the Bush administration.

Of course, the liberal/alternative media's version of life is much closer to reality than that of the corporate media or the right wing's

mythical image of a faith based America. However, a false reality is still a false reality.

There are some people in the broadcast media who will discuss the 9/11 issue and PNAC, but they are few and far between. The truth is that the alternative media for the most part, especially the higher profile broadcasters, will not acknowledge these issues. And if they are not willing to discuss the PNAC connection to 9/11, they are ignoring reality.

The bottom line is that most issues that we are discussing and virtually every controversial topic hinge on the events of 9/11. If there had been no 9/11, the preplanned agenda of the Project for a New American Century would have stayed in remission, where it belonged. There would have been no Iraq War, no Patriot Act, no diminished civil rights, no bleeding of the nationï¿½s resources for a fabricated war on terror, and no financial windfall for the war profiteers. And surely there would have been no way to convince the public that ï¿½9/11 changed everything!"

I am calling for an end to the inexplicable silence about 9/11 and PNAC in the media. I am calling for the independent journalists, webmasters, broadcasters and editors to engage in discussions on the topics of 9/11, and more importantly PNAC. Reality did not begin on September 11th, 2001 or on Inauguration Day of that year. It is high time that the public becomes aware of the individuals who were at the helm when "everything changed!"

A WAKE-UP CALL: Our corporate media are all but dead. We have to counter the false reality being presented to the public by this behemoth. The alternative media are our only hope. We can no longer ignore the existence of PNAC. We must open PNAC and 9/11 to public discourse because all roads may very well lead to or from 9/11.

You sound like a shill for the Public School Teachers Union.

I have a very simple answer for your question and it fundamentally has nothing to do with the teacher's and its "Socialist" liberal Union. It all boils down to the parents or rather, parent as in singular.

In the U.S. the growing percentage of disadvantaged students from single parent households enrolled in public schools is a key problem. As the teacher spends more and more of his or her time disciplining disruptive students in class the parents of average and above average students find their children are not getting the education that their tax dollars are supposed to deliver. The answer for them is also simple. Move to another, better school district or enroll in a private school. In most cases private school is the best choice and the Public school system with their teachers Liberal/Socialist agenda can "go to hell!"

Who the fuck are you to tell anyone how they should teach their children?

Give me your children and I'll show you what teaching is all about.
Oh never mind. You likely have never had any children. Legitimate anyway.

> Consevatives complain so much about how government is so bad at doing
> things, and yet they beg to have them in the religion teaching business.

They are not advocating "teaching" religion. They are simply advocating
giving
students an awareness of other points of view so that students themselves
can
decide in what to beleive or not beleive and not have to be forcefully
indoctrinated
in the liberal, "progressive", socialist, communist athiest ideology.

No one is trying to shove the "teaching" of religion in public schools.
They simply wish to point out to students the "possible" alternative points
of view.
The Left-wing is absolutely frightened to the core that this would undermine
their Socialist and
ultimately Communist agenda. And you know what? It most certainly will!

The problem is 2-fold.

The Neorepublicans want lots of cheap labor to depress wages so the allow gray immigration which taxes the school systems. they refuse to pay for schools, causing substandard educations for everyone. More dumb fuckers means more depressed wages.

You don't know what you are talking about. "Crusading" literally meant to take up the cross to fight the Muslim infidels, except when it was used as an excuse to pillage and loot Christian Byzantium. Musselmen would not become Crusaders. Moorish Spain, like the rest of the Islamic world, was a haven of tolerance for the other peoples of the Book, unlike the areas that enjoyed the benefits of the reconquista where the Jews and Moors were either expelled or forced to convert to Christianity.

I just noticed it this morning. It's auction 5812934893.

With the bidding already over $350, though, I have to wonder whether it wouldn't make more sense to buy a new Quantum QX Pro Loop for around $300. From what I can gather from the many reports I've heard, the Quantum is just as good as the Kiwa.

Teaching unscientific stuff in science class is nothing less than
anarchy. It is undermining the foundation of democracy which is that
we are a well-educated electorate.

The fascistas want us to be stupid, scared and confused. I can think
of no better vehicle for accomplishing that than the perversion called
Judeo/Christian/Moslem (what is that called ''Abrahamism'' or
something) religion being taught to our children as anything other
than a relic from a darker time.

FDR - Thank You for Proving the Point that in the Liberal
Democrat Party of the USA {Run World} the Rights of All
Citizens who happen to be Persons-of-Faith would be limited
to their Homes and Churches.
.
FDR - So you would limit Freedom of Speech is 'only' to Secular
Liberals in our Public Schools.
.
FDR - Your Public School System would have Christians and other
Persons-of-Faith be force into silence about a part of their
life that is very important to them.
.
FDR - Maybe you would like two separate Public School Systems
one 'quality' Set of Schools for the Liberal {Secularized}
Students. An another 'sequestered' {inoculated} Set of Schools
for the Christians and other Persons-of-Faith; so that they would
not contaminate {infect} the Liberal Secular Students with thoughts
of God and Religion.
= = = Two Systems - Separate and Un-Equal [.]
.
FDR - Replace Christian or Persons-of-Faith with Black or
African-American; and may be you can see the Bigotry and Bias
in how you view and would treat Christians and Persons-of-Faith
in your Democrat Party of the USA "New Liberal Society".
[aka : Democrat {National Socialist} Party of the USA]
.
God {Allah} Bless America - Amen.
.
God Bless Our Public Schools with Equality for All - Amen.
.
god bless you fdr - amen ~ RHF
.

brought up the Crusades and the Inquisition.
FDR - So Just How Do the Crusades and the Inquisition
related to today's Conservative {Fundamentalist} American
Christians and Jews ?
FDR - One Has To BE an American - To BE an American [.]
FDR - One Has To BE an Christian - To BE an Christian [.]
- - - Note - That They Are Not Mutually Inclusive or Exclusive.
.
FDR - "Bullshit"
- - - Yes the "LIES" of the Democrat Party of the USA
that are designed to propagate HATE Against Christians
and Jews are to use your word 'bullshit' [.]
.
FDR - "Except it's not a sin. Unless you think love is a sin."
- - - Their is a Difference between "Love" and "Sex" FDR
and if you do not understand that then get a basic education.
That is unless you happen to think that since 'you' Love 'your'
Father and 'your' Son that 'you' should be having Sex with them
as a Natural Thing !
.
FDR - Speaking of LOVE {Not Sex} Jesus said,
"Greater Love has no man than this,
that he lay down his life for his friends." John 15:13
.
fdr - hate the sin - love the sinner - amen ~ RHF

I used to have a Quantum and it is a very good product for $300. I doubt I
would pay the usual $500 + on Ebay for the Kiwa.

After U.S.A.destroyed the factories in Germany in World War Two,some of them German Aircraft Factory people were looking for something they could build and sell.So they started building some Automobiles.Some of them Automobiles were little bitty three wheel Automobiles that were powered with little bitty Motorcycle one cylinder engines and them little bitty Automobiles would only hold one person,some of them had room enough for two people,such as them Messerschmit Automobiles.When I was in the Army in ARADCOM at Scott Air Force Base,Illinois in 1963,I bought a 1958 German BMW Isetta Automobile for $350.00 from an Air Force Officer at Scott Air Force Base.The Automobile had only one door which was the whole front end of the Automobile and it had a little bitty one cylinder BMW Motorcycle engine behind the seat,loud little bugger that little bitty one cylinder BMW air cooled engine was and I do mean LOUD!,especilly when I was driving that little bitty BMW (Bayerische Motoren Werk) Automobile. The two rear wheels of the Automobile were chain driven and they were so close together,that from a distance,the Automobile looked liked like an egg on three wheels.I sold the car to an Army Officer when I found out I was going to Ordnance Armorer Ammunitin School at Fort Knox,Kentucky for two months and then to Vietnam.I should have looked up that Air Force WAF woman at Scott Air Force Base who worked at the Base U.S.O.because she had been badgering me before to sell it to her,I probally could have got more money.The first person who bought the Automobile was a woman in Germany,I sold the Automobile,but I kept the Manual to the Automobile and there is some old paper work in the Manual with some information about that woman.The Manual is sitting in one of my Foot lockers right now in the closet in my bedroom.

This is Blaupunkt Derby 691 with FM/SW/MW/LW. It was made around 1969-70 It's in good condition with some scratches on the grill but not bad and works good but needs the ant. fixed. $35 + S.H. 8lbs
http://webpages.charter.net/brianhill/derby6911.jpg

GE Long Range/ P-780. These are the original GE Super Radio. This one is in great condition and works great too. It has a crack in the vinyl handle. $45 + S.H. 12lbs
http://webpages.charter.net/brianhill/GE1.jpg
http://webpages.charter.net/brianhill/GE2.jpg

I also have another version of P-780. It's the same radio but doesn't say "Long Range" on the front and it doesn't have ant./gnd terminals on back for external ant. Must have been the first run of these P-780s? It's otherwise exactly the same. It needs the four electrolytics replaced, Very easy to do on these radios. It has low volume because of it. It's in excellent shape with one unoriginal Knob. $15 + S.H.12lbs

Heres a link to some articals on the P-780 receiver:
http://www.transistor.org/feature/jutson/feature.html

Shipping is from 55992

Furthermore, when has it become legal for the Socialists to steal my property tax monies to fund their Socialist/Communist agenda? I have the freedom to choose where I wish to send my children to school. If I choose not to participate in the "Public Socialist School" experiment I demand that MY property tax monies not be confiscated for the funding of THEIR Socialist agenda. I want government OUT OF THE EDUCATION SYSTEM, period!

Let those who choose Socialist indoctrination pay for it!

You will then see how quickly the Socialist school system collapses. Just as all Socialist systems have collapsed throughout history. But you see, the Socialists know they must continue the tax robbery to keep their agenda viable and will use any underhanded legal argument to perpetuate the lie. And so it is, they place you in the position to cut your own throat. That is called "Suicidalism". [See the original post of this thread.]

Republican administration now.

That's also why DeLay was indicted without facts (read the indictment,
folks, there are no facts there) for supposedly doing what Nancy Pelosi
actually got caught at, but Nancy only got a comparatively small fine.

--
If John McCain gets the 2008 Republican Presidential nomination,
my vote for President will be a write-in for Jiang Zemin.

> upon the non-Islamic population of the M.E. during the birth of Islam.

You just tried to change the arguement in a desperate attempt to win debating points. The Moslems did not take up the Cross and go Crusading. What I wrote was correct.

The expansion of Islam was no bloodier than other conquests from that era, and their relatively small numbers forced the Saracens to be less bloodthirsty than the Visigoths, Goths, Vandals, Lmobars, Suevi, Angles, Saxons, Jutes, Norsemen, etc. Many (most?) Christian communities in north Africa and the Levant certanly survived and thrived under Fatimites and the Hamdanids. You have been taken in by the Crusader propaganda.

The United States is a representative republic. This was clearly the
original intent of the founding fathers. You have the right to
petition the government to change the laws that you do not like. If
the majority of the legislature does not agree with you, you can either
continue to work for change, you can leave the country, or you can
whine like a crybaby.

The public school system is there to insure that we have an educated
electorate who are skilled consumers of news and current events.
Skilled news consumers make better voters.

As you know I am mad about radios, WW2 airplanes, tanks & subs.

I was thinking about getting a compass so that I could better find my possition at home. So I did a search on Ebay on Compass. I then came accoss something that is called a Radio Compass.
EBAY Item number: 6565758752

My guess it that the gauge is telling the pilot his dirrection in the sky. But why is it called a radio compass?

Is the device putting out a signal? And is the signal bouncing back?

73 SR!

You are simply trying to distinguish a difference. There is no difference.
Both Islam and Christianity had their murderous "Crusades" - semantics.

The point is Islam continues on with its murderous "Crusades".
Whether you wish to delineate the semantics or not is irrelevant.

I'll post the explanation though I think you fully understand it & are
just having fun with your reply.

Godwin's law (also Godwin's rule of Nazi analogies) is an adage in
Internet culture that was originated by Mike Godwin in 1990. The law
states that:

As an online discussion grows longer, the probability of a
comparison involving Nazis or Hitler approaches 1.

There is a tradition in many Usenet newsgroups that once such a
comparison is made, the thread is over, and whoever mentioned the
Nazis has automatically lost whatever argument was in progress.
Godwin's law thus practically guarantees the existence of an upper
bound on thread length in those groups. Many people understand
Godwin's law to mean this, although (as is clear from the statement of
the law above) this is not the original formulation.

You're probably all familiar with legendary UFO talk show host Don Ecker. But if you're not, then you really want to check out his new radio program. You can download his show directly to your computer. I've heard that he is about to do a interview with the world famous Zecharia Sitchin who hasn't given an interview to anyone in years. It's free so I've been told. His website looks cool. Might be worth check out.

I also see how you've denegrated my character by saying I may have had
illegitimate children, Once again, a nice shining Christian example.

And I'm supposed to believe how high and mighty you are and take your
argument seriously?

Get lost bub.

> .

RHF - This is the kind of partisan invective that makes people cringe. "Limited to their homes and church"? You can pray anywhere you want. You can pray in school. You can pray at the mall, the car wash, a tittie bar. Who cares where you pray? The issue is compelling everyone in the place to pray along with you. The role of government is not to compel kids to pray in school. They can meet in groups and pray before school, like they do in communities near me. The school athletes can join the Christian athlete's group - whatever it's called. They can meet together and pray before the big game, right there on the football field - or afterward. No one is violating their first amendment rights. Just don't ask me to stand up and beg Jesus to help the fighting, marauding Red Devils to slaughter the cowardly Blue Devils for the district championship. Not in a public stadium. Keep it to yourself. And leave my kids alone. If I want them to pray I'll take care of it myself.

And one more word of advice. You need to quit listening to so much right-wing talk radio. They have sold you a bill of goods which you can't seem to stop regurgitating. Democrats are not anti-Christian, they're not all atheists. The pejorative "liberal" has been used so much that it has lost its sting. So the new buzzword from the right is now "secularist". Give me a break! God isn't a Republican. Are you so insecure in your religious beliefs that you need everyone to agree with your view?

> Is the device putting out a signal? And is the signal bouncing back?
>
> 73 SR!

No, it's a radio receiver with a directional antenna. The display shows the compass bearing to the radio station being received. There used to be portable radios, usually the "all band" variety, that had built-in radio direction finders (RDF's). Heathkit even had one, though I don't recall the model number.

Whay other persons of faith? The only ones whoever complain are Chrisitans
because they can't sing praises to Jesus at the school recital.C'mon RHF,
where's the outcry to hear about Mohammed? Where are the Muslim kids
parents complaining they can't kneel on a mat and pray three times a day?
Where's the Hindus?

Actually, there are plenty of Catholic schools where Catholics send their
kids everyday because they feel it's important enough to make Christ a 24
hour a day deal. You are welcome to send your kids to any private school
you'd like, there's no one stopping you. You can even home school your kids
and hang pictures of Jesus above their heads as they pray an learn the
multiplication tables. No one is stopping you. But all you ever hear is
complaints from Christians because public school isn't all about teaching
the kids about Jesus.

You speak of something called rape, where the parties are not consenting
adults.

Just as a adult man and women freely love each other and want to marry, we
should afford that to adult men or women who want to freely love their own
gender. I don't buy that it's a sin. Love isn't a sin.

www.devilfinder.com World War Two Aircraft Radio Compass

My old buddy owns an ex U.S.Navy Ship Compass.He was in the U.S.Navy active duty for four years on the U.S.S.Ticonderoga back in the early 1960's (they were shootin at Whales,Tonkin Gulf incident,at the same time,I was humping ammo in Vietnam) and in the U.S.Navy Reserve unit here in Jackson.One day they were getting rid of some old things at the Reserve unit he retired from here in Jackson on Jefferson Street and they gave him the Compass and an Anvil (I have been trying to talk him out of that old Anvil for many years) and a few other things.One of the balls was missing from the Compass (it is a big heavy Compass,stands over waist high, and about twenty years later I was in Pensacola,Florida and I saw a big store that sells antique nautitcal things and they had a Compass ball in there for sale for $40.00.I phoned my old buddy long distance and I asked him what diameter the Compass ball on his Compass is.I bought that Compass ball at the store in Pensacola for him.

No, LORAN uses time measurement.

A Radio Direction Finder basically points in the direction of a LW or MW radio station.
Have you ever used an old AM radio with a ferrite rod antenna inside? If you turn the radio around the signal drops out if the end of the radio is pointed toward the AM broadcast antenna.

Old direction finders used big circular crossed loops, now ones use a block of ferrite with two windings on them at 90°.
With a combination of signals driving servo amplifiers, it is possible to drive a device called a Goniometer to a null position, ie no signal, then read off the bearing.
With a bit of practice, you can do the same thing with an old transistor radio. BUT - they aren't very accurate. 4 or 5 degrees was considered excellent. If you are trying to get a bearing on a distant station, be sure you are using the groun wave, as the ky wave can distort and come in from different angles.

Most modern aircraft carry an ADF receiver, but some are being removed in favour of GPS.

Brad.

There is an old Humphrey Bogart movie (I don't remember the title of the movie just now although I have seen it a bunch of times before) and Humphrey plays the part of a bad guy in the movie and they are going to steal the payroll from a gas plant.One of the crooks buys a tractor tanker (sort of like an 18 wheeler) and a guy who is playing the part of one of the crooks,but is really a copper,installs a radio tracking device underneath the tanker so the coppers can trace the truck tanker.It is a real good old Humphrey Bogart movie.

Really? Then scientists should be allowed in your church to teach alternate theories about religion. Correct? The 'other points of view' are religious in nature - not science!

BTW, When did science get associated with 'left-wing' and 'socialist' agenda? Are scientists now considered evil by conservatives? Wow!

Ok I have a Panasonic 2200 shortwave radio that has the ferrite rod antenna on the top. Often I have to tell people that it is not a handle dam it!

I once used it while driving from Florida to New York. As I got closer heading north, I tune it to a strong NY station, and yes the signal got stronger.

Now I understand what an trans-oceanic radio is. I am still looking for information of the radio that C. Linberg used.

As a kid I use to take broken am transitor radios apart. Many of them had a small ferrite rod inside. But I noticed that pocket radio (later on known as walkman)did not have them.

Some ferrite rod look like a minature dipoles. Different tiny thead wires coiled around. As a matter of fact I recently built a 90 feet per side dipole coiled around pvc tubing, which is hollow. And I thought to myself, what if I where to put a long iron pipe inside the top part of the pvc tubing? -(looks like a T)

Also, thoughout the 1970's when big stereos became popular, (you know the record player, 2 wooden speakers, radio with a long am/fm bandwith with a cool red lighed niddle, silver face plate, solid state, 8track and the girlfriend) many of them had an odd long plasic thing in the back. It looked like something you would put your toothbrush in. LOL!

I would often say to myself: if that is an antenna, what a strange place to put it!

As for LORAN, I think I hear the last of the LORAN signals while I was in Florida. It was around 150 KHZ.

73 SR!

SR!

Prometheus no good. He gave Allies fire to bomb Dresden and Frankfurt
civilians with. Prometheus no good.

Mind you, you above average in literacy Southerner, it could have been
worse:

==========
The RAF, writes Bernstein, "was putting together a bombing plan for the
use of anthrax against six German cities: Berlin, Hamburg, Stuttgart,
Frankfurt, Aachen, and Wilhelmshafen. The expectation was that 40,000 of
the 500-pound projectiles, containing about 4.25 million four-pound
bombs, could kill at least half the population 'by inhalation,' and many
more would die later through skin absorption."[42]

http://msqr.us/articles/firebomb.xml?&page=6

Is it possible to have a radio that when the signal comes in, it can
tell you which dirrection it's from????????????????????????????????

SR!

After she combed her hair (it isn't my fault there aren't any curtains on her kitchen window and I could see her from the top down about six inches down past the top of her shoulders) I saw what looked like to me a yellow plastic mop handle waving around,then I saw her going through the motions as if she was mopping her kitchen floor.Oh well,that's the way the mop flops,I reckon.This morning she said she has two dogs and she is going to build a dog pen (that means I will be doing most of the work) in her yard for her dogs.

Science, by definition, is apolitical however any of the 'political
machines' will use it (or select portions of it or just plain
junk-science) to further their cause when necessary. I am pretty sure
some conservatives feel scientists are evil. It is common for folks
of strong religious belief (no specific denominations mentioned) to
presume scientists to be lacking in religious faith though many of
them (scientists) have said that as a result of their studies they
find their faith in 'a creator' to be strengthened.

I endorse teaching our children about science, religion, history, the
arts and especially critical thinking. Religion will not suffer,
people will still find faith and some will still be agnostics as has
been the case over the history of mankind. Also, science will not
suffer and we will continue to lead better lives as a result of it.

Just my opinion - your mileage will undoubtedly vary.

197. Radio Interference Driving me nuts

Newsgroup: rec.radio.shortwave
Date: 2005-10-02 04:03:03 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns96E3849AFE3TheDoctorisin@216.196.97.142>
Source record: 42459

Noise noise noise, radio noise, interference that is. My house is haunted by some kind of interference. I can't tell if it is 60 or 120 Hertz. I tried to find a simple online (preferably Active X) sound analyzer or oscilloscope to measure the noise, using the audio output from the Icom R-75 to the sound card, but no luck finding a suitable program yet.

One of the sources of noise is my Son's cellphone charger, probably a cheap switching type, it weighs nothing at all. Anyway, this throws out interference from about 2.5 MHz to at least 12 MHz, very strong. Unplug it, viola, the noise level drops. Yet not enough. Another takes it place, at least in the 3.2 MHz and below, no doubt even in much higher ranges. In an attempt to locate this rascal I selectively unplugged what I considered likely offenders. No luck. Then I turned off all the household power, except the circuit for the receiver, and the sound continued unabated. I tried substitution for the transformer for the affected radio, no difference. I awoke this morning and noticed that the noise level was way down. Good, yet later in the day it was back. Usually it can still be heard just as loud at midnight as it can be hear at noon. Why the attenuation this morning is beyond me.

I have an Icom R-75 and a Yaesu FRG-100, in different rooms, with different antennas, they are both similarly affected by the noise. One is in the front of the house, the other the rear. Just yesterday, I installed an outdoor antenna on the Yaesu, a yet ungrounded antenna, stretching within 45 feet of the house. My Yaesu was the recipient of a lightning strike that came down the tree in the rear of the yard, jumped to the antenna wire essentially fastened to the tree, and was mostly shunted to ground. The balance came in through the radio and did extensive damage to some electronics in the house, yet the Yaesu survived with a simple obliterated circuit board track.

The Icom has an indoor antenna, a simple wire that goes around the ceiling, tucked into the ceiling/wall junction, offering around 30 feet of wire.

The Yaesu has this antenna, coax fed, http://www.universal-radio.com/catalog/sw_ant/2205.html 45 feet in length for the antenna wire itself, traveling from the window to a nearby fence post, on the opposite side of the house from the Icom receiver. The Yaesu also has an indoor antenna, similar to that used by the Icom, except that the room is larger therefore the indoor antenna is longer. Regardless of the antenna, the interference is always there on either set. The interference is also to be heard on my Sony 7600GR when battery operated.

So where does the interference come from? Neighbor? Radio signal versus power line? Since the radio maintains an S9 noise level almost

continuously on many frequencies, how is one to listen to distant stations?

What's my next step? I have found 2 offenders, my Son's cellphone charger and the stupid Hughes Direct TV Receiver, sheesh, it's SO BAD it kills the cordless phone (900 MHz digital) if you get too near it. This afternoon, while in the backyard with the Sony, and the Direct TV Receiver being in the front of the house, I noticed that 9115 KHz was obliterated with noise. I went into the house, unplugged the Direct TV receiver, and viola, the noise went away. Yet even with these unplugged, far too much of similar noise is to be heard. I have whole house surge protection, mounted at the electric meter, can this be a source?

Any suggestions on an effective way to track and reduce this type of interference? If it is in the power system, what can be utilized to block the interference, or at least attenuate it? Since I can hear it on the battery powered Sony, most likely it is radio interference, but my house is likely NOT the origin of the noise, where do I go next?

Thanks,

Dr. Artaud

Yes. BUT. The DF principles I have described do not work effectively above MW. Ferrite antennas are less effective. The thin wire you described it called Litz wire. Also remember that point I made about skywave signals coming in from different directions to groundwave. Very nasty errors occur at dusk and dawn due to diurnal shift.

The alternative is to have a log periodic or perhaps a StepIR tunable, turnable array.

Brad.

Congratulation -- you drank the Kool Aid. No one -- no
environmentalist -- believes that myth. There was some worry about
it, enough to prompt a study, that showed that birds have no problem
with the blades and steering clear of them. Birdstrikes occur, but
are relatively rare, down in the statistical noise.

But believe everything that Rush tells you, because he's soooo
intelligent and open minded.

..but it was *YOU*. posting under the alias of a female who said they wanted sex with three German Shepherd dogs. That would make *you* a pervert of the basest kind. Normal people don't get their kicks by impersonating another gender to talk about sex with animals.

Do you dress up in women's clothing when you post as a woman from one of your multiple Webtv accounts? Do you dress like a woman when you go for your afternoon chats at he Goodwill store?

Remember the Goodwill store? That's where you wrecked the picture of a television by hiding a magnet in your palm to 'get a REAL GOOD DEAL'.

That was one of two televisions you have so far admitted to 'purchasing' via fraudulent means.

Sick? You are certainly in a position to know sickness. I am also happy you aren't me. I'd have to reconsider my opposition to suicide.

Hello:

Haven't looked at this stuff in quite a while.

2182 USB was what I remember as the emergency distress freq.
Is it still used ? How and where ?

I just noticed that 2187.5 is also listed.
How does this differ in usage from 2182 ?
Also USB ?

Thanks,
Bob

3257.bay.webtv.net:

I've fairly much ruled out my house, since I shut every breaker off but
the one for the radio itself. Boy the interference is here with a
vengeance this morning. Always about S9, so this precludes listening to
any DX of any kind. I can't believe that manufacturers are permitted to
make equipment that creates such interference.

Our Hughes Direct TV receiver kills the 900 MHz digital cordless phone if
you get too close. It also sends out interference on 9.115 MHz,
massively. What up with that? I suspect that I will be converting back to
cable soon, if this is all Direct TV has to offer concerning the quality
of the equipment. I never had problems with my Toshiba Direct TV
Receiver. After years, it quit working and this is all I could get that
still had the enhanced Dolby Sound, with fiber optic output for the audio
signal to my receiver. I wasn't going to pay $400, so this is the TIVO
model that Direct TV offers as an introductory item for new customers or
upgraded customers to TIVO service, just $99 and a 1 Year Contract.

When I moved here 2 years ago, everything was fine, in terms of shortwave
reception. This interference is gotten out of control.

I also have a Cable Modem (which is new for me), so maybe I need to
experiment with removing the cable from the outside of the house and see
if it is bringing the interference inside.

I'm not for banning anything. I do support keeping religious
philosophy out of science classes.

That the Christians in this country claim to be oppressed is the
height of absurdity. They are coddled almost everywhere. They will
be happy until they have infected our public institutions, which are
wisely banned by the Constitution from promoting any religion.

Just to eliminate ALL possibility that it is in your house, kill the
power to your *entire* house, using a *battery powered* receiver to see
if the noise is still there.

Good luck!

C'mon RHF, you're smarter than that. No one is "banning" persons of faith from public school. If you want to worship, that's fine. That's your right. But don't compel others to follow suit. Not in public schools or public places. What's so hard to understand about that?

Okay kids, take out a pencil and paper. Let's see if you've been paying attention. The first question: What was Prez Bush referring to when he said "It's real bad"?

a) The damage from Hurricane Katrina
b) Having to cut short his vacation after criticism about lack of federal response to Hurricane Katrina
c) Laura's cooking
d) The Republican congressional leadership
e) All of the above

Greg

The word "crusade" is not reserved for the Chritian Crusade as your Chinese Communist Party dictionary mistakenly depicts. I suggest a new dictionary not predisposed of Communist propaganda.

The Islamic "CRUSADE" is alive and well in Sudan with the full endorsement of the atheist Communist Party of China.
Over 1,000,000 Christians MURDERED by the Islamic CRUSADE (and still counting).

This isn't fairy tales, this isn't centuries old history, this is an Islamic CRUSADE occurring TODAY, right in your blinded eyes face!

Enjoy your Islamic "Fairy Tale" Prayers Mr. Muhammad Feng. They will soon be answered in kind.
Virgins await for you with bated breath.

Didn't hear it from Rush - read it in The Los Angeles Times - a noted
'liberal' news paper. From what I've read in other than the LA Times,
the information said same as yo do - that most of the birds figure it
out. However, that particular windfarm is still now under restricted
operation due to concern for migratory birds so in this case the
environmentalists did win.

Agreed.

They should take their knee-jerk Larouche whacko BS to:

http://www.assaultweb.net/cgi-bin/ultimatebb.cgi?ubb=forum;f=42

...where they would have a captivated audience. Still it was fun
listening to 3.931 last night. They had a few 'detractors' in there
and the fur started to fly on several occasions.

Was funny as if some fool put Baby Ruth candybars floating in a punchbowl
at a kosher wedding. :)

Migratory birds are doomed anyway. Their annual flughts are supposed
to coincide with larval stages of certain insects and climate change
has screwed that timing up to the point that the birds don't have any
food.

In every "religious" school that I am familiar with in the U.S. there are science, math, chemistry, biology and physics subjects being taught. Those subjects are taught very well I might add and those students invariably go on to succeed in higher education. Usually performing better than public school counterparts.

>
> BTW, When did science get associated with 'left-wing' and 'socialist'
> agenda? Are scientists now considered evil by conservatives? Wow!
>

Your obviously are clueless as to the agenda of Socialist/Communists to exclude ANY reference of religion in our public schools and government. An exclusion agenda that indeed has nothing to do with science.

How your mind came to the conclusion that my argument advocated excluding science is beyond my comprehension.

My argument is for the inclusion of "spiritual" study on an elective basis. That is what is being argued in the media but the Leftist/Socialist/"Progressive"/Communist factions are twisting the issue into propaganda by stating that it advocates literally teaching religion. That is completely false and a deliberate lie.

To deny a choice is in essence advocating that God does not exist and that only Science can offer answers to ALL questions. Including "spiritual" questions which is non-sense. This exclusion of religious thought/theory in itself is evidence of the endorsement of ideology that the Communist Party is in essence god and IT is the center of the Universe. Study Communist ideology and that is what you will find there. Atheism is their religion where the Communist Party Politburo IS your living god - literally.

The heavy duty mold and assorted water / wind damage means
thousands and thousands of structures will just be torn down.

Even if you Totally Gut a house like that, the support timbers would be
warped,
Pipes twisted, joints weakened, wiring shot.
.
and how do you disinfect a house that's been sitting in sea water /
chemical / .. Other liquids .. mix for so long?

On the Up Side.. anything rebuilt would be a candidate for good modular
housing, with VOIP Phone service.. etc

and, while they have the chance, will they raise most of N.O
to above Sea Level ?

Palatial Investor Class Mansions next to Humble Trailer parks..

We shall see..

Source to Stephanopoulos: President Bush Directly Involved In Leak Scandal
Near the end of a round table discussion on ABCï¿½s This Week, George Stephanopoulos dropped this bomb:

''Definitely a political problem but I wonder, George Will, do you think itï¿½s a manageable one for the White House especially if we donï¿½t know whether Fitzgerald is going to write a report or have indictments but if he is able to show as a source close to this told me this week, that President Bush and Vice President Cheney were actually involved in some of these discussions.''

This would explain why Bush spent more than an hour answering questions from special prosecutor Patrick Fitzgerald. It would also fundamentally change the dynamics of the scandal. President Bush could no longer claim he was merely a bystander who wants to ï¿½get to the bottom of it.ï¿½ As Stephanopoulos notes, if Bush played a direct role it could make this scandal completely unmanageable.

I am glad there is that new law in Jackson about tinted vehicle windows.Cops need to be able to see what is going on in any and all vehicles they are approaching.There is also a law about them vehicles that have them wayyyy too loud radios that make peoples house windows rattle,but they don't seem to enforce that law too much.Tinted windows are a whole nother story though.

They will just have to learn to live with the mold as millions of
others do here in the Midwest where it is hot and extremely humid. I
have green mold all over the place and it has never made me sick.

I just toast some bread, pour melted butter over the toast and then
spread the Green mold on top.

I have "Mold du jour" every day and it doesn't harm us at all.

I got a few loose screws myself Greg but I was hoping we could get along a little better by not antagonizing each other with too much religion and politics. I myself have jerked a few chains over the subject and just recently realized how stupid I was. You can't win arguments over religion and politics so why waste the steam? Ah forget it! Wishful thinking? People love to hate and argue. I guess this cup of coffee made me over ambitious this morning and brought out my idealistic side.

[snip]

Too bad KMOX is not broadcasting Cardinals' baseball after this season.
I can listen to their games after dark from Knoxville, Tennessee. St. Louis is
only 392 miles though.

Anyone know who's picking up the Cards' games? Enough power for
me to hear them?

It's sort of like you turn a dinner plate upside down and New Orleans (and many other cities and towns along the Gulf Coast areas too) is sitting on the curved downward edge of that dinner plate.Not only is New Orleans sinking,New Orleans is sliding downward off of the edge of that dinner plate and downward into and off of the shelf (we can't see that shelf because of the water in the Gulf of Mexico,but it is there) that extends downward and outward into the Gulf of Mexico.The Earth is very dynamic and is always changing.Earthquakes,Volcanos,Tectonic Plates,Plates sort of like a big room full of broken chinaware plates (Earth is made of Space junk) always shifting around and sliding over and under and agains't other plates and churning itself inside out.We are Dommed,,, we are Doomed!,Chicken Little,RUN!,the Earth is busting up all to pieces and the Sky is falling.

It's not the doorbell transformer, it's the neon lamp inside the
button. Same with fish tank heaters. Those shitty little neon bulbs
can create interference for a block around them.

A lamp dimmer creates all manner of bizzarre shaped harmonic-rich
pulses, they are the pits. Even if a halogen torchierre doesn't burn
down your house, it'll screw-up your reception.

I am 100% compact fluorescent lit and don't have a single dimmer
anywhere. (I do have incandescent bulbs in the fridge and stove and a
halogen trouble light behind the stereo, none of which stay on for any
length of time).

Aha .. then there's the mold. Let us not forget the mold. Two profitable possibilities arise here.

First - maybe the voodoo shops in the 'quarter can make a magic potion out of it and sell it to the tourists.

Or the local brewers can mix it with something liquid out of the storm sewers and ferment it and sell it as an intoxicant.

As I recall from living there in 1997, there was putrid glop growing on walls in New Orleans long before Katrina.

Why all the fuss now ?

www.devilfinder.com 1979 Easter Flood of Jackson Mississippi

There was a big flood here in Jackson on Easter of 1979.Some of the down town buldings in Jackson were at least waist deep or deeper in water when heavy rains up North caused the Pearl River on the East side of Jackson to over flow.The crooked politicians around here said they were going to do some studies and perhaps have some Levees built so that Jackson wouldn't flood again.Nothing at all concerning that situation has happened.They stole all of the money that was allocated for that.They are just as crooked as them crooked politicians over there in Lousiana and elsewhere in America.

damn

'Personally I think it's the height of hypocricy to distinguish between
various warlike means:
methods of killing persons without destroying property - methods of
destroying infrastructure without killing persons - methods of sedating
persons so there's no need to kill them if they're in your way -
but then it's also ridiculous to conduct a war.'--micheal p

Be very carefull of what you wish for, my Greek-friend-of-short-stature
Stephanopoulos....

Remember if Junior and Cheney were ever to step down
then Condi Rice would be our new President.

NOW THAT IS FREAKIN SCARY !!!!!!!!!!!

The last ting America needs right now is the GOP's
TOKEN BLACK POSTER-PERSON what has
an Imelda Marcos type SHOE FETISH in the Oval Office.

That would be reason alone to RUN (not walk) to Canada.....

The official state religion of the USA is Freedom.

I believe the ban is only against organized group prayer. The 1 on 1
kind is still OK, as the thought police are still developing their
brain scanning machine.

An athletic team praying for a victory is blasphemy.

I subscribe to DirecTV and my DirecTV set top box was made by Hughes.I haven't ever noticed it causing any kind of interference.It could be your Hughes set top box is defective.Mine is sitting on top of a wooden board on top of my tv set I use for watching old,old movies (Magnificent Obsession movie is on there now) which is sitting next to another tv set I use for my webtv.

Ethanol for use in alcoholic beverages is produced by fermentation: it
is a product of sugar metabolism in certain species of yeast in the
absence of oxygen. The process of culturing yeast under conditions to
produce alcohol is referred to as brewing. Yeasts can grow in the
presence of up to about 20% alcohol, but the concentration of alcohol
in the final product can be increased by distillation.

It is well-known that the Bush administration speaks directly to God
and is hostile to the scientific establishment. They must have found
something in the Bible or spoken directly to God to justify separating
the time of day from the old-fashioned and atheistic notion of using
the positions of the sun and other celestial objects. Since the
scientists are all known to be Godless Communists, their opposition
must be a Communist plot.

I don't think they've dropped English. Still listed on EiBi at 1830-1900, though
12105 not shown. Not sure why that is as it's been reported to be there.

I have to agree with this. For many years, I have been steadfast in
two areas that I DO NOT discuss with anyone, even my closest friends:
Religion and politics. It goes a long way toward keeping good friends
"good friends". At any rate, it works for me. Brian's point is
well-taken: You can't "win" any argument on either topic - neither can
the other person.

Tony

Condor would be horrible for Amerikkka.

Like ALL stepnfetchits, in her desire to please the slave master, she would be ten times harder on black people and on people of color around the world than the devilish Shrub has been.

All she wants is a pat on the head from the ogre and she would be setup for a month.

She is one of the slimiest black people to surface on the national scene since Clarence Thomas.

She would get us involved in a nuclear war within six months of being elected.

She is totally brainwashed and brain damaged.

Their still around Dan. (ain't that amazing?) KJI can still be heard
occasionally in the daytime usually weekdays on 14.313 although
he's not as active as he used to be allegedly due to health reasons.
On Sat nights ole 'Sid the Lid' K5BLB and his crew out west hold fort on
3.947.5 each and every Saturday night to obstensivly bloc Vic from
running the Lib Net starting on that freq, or just below their old home of
3.950 which is now occupied nightly by a group in the Southeast.

It's an ongoing soap opera Dan. One of the last few on 75 Meters in fact!
My guess is it will keep going on until all the protagionists on both
sides are either 6' under the earth, or dottering in pajamas in a nursing
home
someplace talking to itheir maginary pets and pink elephants on the
wallpaper.....

(good glub aye LOVE ham radio, it's so f-n predictable even though
it's on it's last gasps of technological and usefull life)

Actually, wood alcohol is methanol and not rubbing alcohol (isopropanol). Anyone ingesting wood alcohol is given ethanol to prevent further conversion of the methanol to formaldehyde. Formaldehyde reacts quite nicely with proteins and is very good at causing blindness. Isopropanol would be converted to acetone and is readily eliminated from the lungs and by the kidneys.

Nothing wrong with being over ambitious and having a realistic side ;-)

On a radio-related note, propagation was miserable at my QTH this morning. Absolutely no sign of PNG on 4890 kHz this morning and even WWV/WVH weren't at their usual killer strength. Reception was much better yesterday.

We don't fight your war of lies; I know it's hard concept for you to grasp. Did your buddy Bush lie about WMD's or not?

Straighten things out? You mean in the say way that the USA straightened things out in Panama, El Salvador, Honduras, Guatemala, Indonesia, Iran, Iraq, Vietnam, Cambodia, Laos, Chile, Oman, Lebanon, Afganistan, Angola? The same way that the US Army straightened things out in West Virginia (1920-1921) and South Dakota (1973)?

You have some very strange definitions in your vocabulary!

There appears to be some confusion about the solar aspect...

==========
The radio towers would be powered by two diesel generators 24-hours a
day that would be located on the 4,500-sq ft concrete pad described
above. A back up generator would also be located on the project site to
supply electricity in the event of a power outage. The larger 275 DQAE,
470 bhp generator would operate at night to power the transmitter, which
only operates at night. Both generators would have exhaust silencers,
and would be located in sound-attenuating structures. The diesel fuel
for each generator would be enclosed in two 5,200 gallon steel tanks,
located approximately 10 feet from the two generator structures.

Here in the middle of Tx. they're usually audible (on 100' of wire,) on 9.495, but it's rare that the signal is strong enough for easy listening. Down here, (at least,) another station overpowers them on 11.875. A while back I stumbled on to their broadcast to the Indian subcontinent on 15,600 but that was one of those minor miracles of propagation, (that we enjoy so much.) I've got a MFJ 1025 on order which I'm hoping will improve the situation. Steve

Questionable Reception
Switch of Radio Stations Signals Cards' Latest Break From Old St. Louis

By Les Carpenter
Washington Post Staff Writer
Wednesday, September 28, 2005; Page E01

ST. LOUIS -- The tower at night is a magical thing, a husk of girders
that climbs into the midnight gloom before reemerging as a pulsing blue
light 476 feet above the Illinois flood plain. And when the light
flashes, it fills the fog with a gauzy azure glow. Then, as fast as it
clicks on, it blinks off and everything is still again.

There is something potent in this glow, with 50,000 watts of one of
America's most powerful radio signals booming across the heartland at
the peak of its force. In the distance, just across the Mississippi
River, the lights of downtown St. Louis twinkle, but the nocturnal
sounds of KMOX also fill radios set to 1120-AM in places as far away as
the Mediterranean and New Zealand. For the past 52 years -- and parts
of the decades before -- the signal has brought the St. Louis Cardinals
with their nine World Series championships to Oklahoma, Texas,
Mississippi, Iowa and beyond. It created so many Cardinals fans,
winning them away from closer teams across the Midwest, the South and
even upstate New York, that the club's venerable announcer Jack Buck
used to love walking through the parking garages next to Busch Stadium
before the game simply to count the out-of-state license plates.

"It's death, taxes and KMOX," said Tim Sullivan, a 54-year-old retail
store manager in St. Louis.

In a city that clings hard to its civic institutions, there was always
a comfort that two of its biggest -- KMOX and the Cardinals -- would be
married forever.

But there has been a divorce in the family. And last month, when the
Cardinals announced that, starting next season, they would be moving
from KMOX to a smaller radio station, KTRS, the gasp could be heard
from Edwardsville to Kingdom City.
....

KTRS is at 550 kHz.

< Snip >

I don't care about this subject as it's off topic politics that has
nothing to do with SW.

Starting the thread with OT does not solve the problem that this stuff
does not belong here. You know where to go if want to ague politics on
Usenet.

This has also been cross posted to a news group that has nothing to do
with SW.

You are now in the kill file along with jd.

I have seen that water is a big killer in our society.
More under age kids die from drowning than from gun play.
And just look what it has done recently in the south.
I think Bush has a moral obligation to ban water with a executive order and save us all.
If he does nothing about this killer water then it is his fault due to indecision
Oh yeah,
I have to work tomorrow and that is Bushes fault also.
I will think of a reason later.

Dan

What is really scary, is the actual list of who could be president
(the following may or may not be current; they keep changing people)

* The Vice President Richard Cheney
* Speaker of the House John Dennis Hastert
* President pro tempore of the Senate1 Ted Stevens
* Secretary of State Condoleezza Rice
* Secretary of the Treasury John Snow
* Secretary of Defense Donald H. Rumsfeld
* Attorney General Alberto Gonzales
* Secretary of the Interior Gale A. Norton
* Secretary of Agriculture Mike Johanns
* Secretary of Commerce Carlos Gutierrez2
* Secretary of Labor Elaine Chao3
* Secretary of Health and Human Services Mike Leavitt
* Secretary of Housing and Urban Development Alphonso Jackson
* Secretary of Transportation Norman Yoshio Mineta
* Secretary of Energy Samuel Bodman
* Secretary of Education Margaret Spellings

* Secretary of Veterans Affairs Jim Nicholson
* Secretary of Homeland Security4 Michael Chertoff

Alas, if they had left the FEMA head a cabinet position, even "Brownie, you're doing a heck of a job" coulda been in the line of succession for president...

I think The CIA can monitor what is going on inside your house if you have one of those new LCD TVs.
Also if you have a broadband internet connection you are not safe from the NSA no matter what kid of firewall and or router you are using.
Lets not even talk about TIVO or satellite.

I may be wrong, but I think what they outlawed was where the announcer says
"will everybody please stand..." But the kids on the field can huddle up,
those that want to, and pray.

Yeah your probably right. Look at the Abernathy Radio group that used to
dominate 3894.5. They are history. Well I don't have the time to go
through all of them...hi.

KJI and BLB are real world class retards in my book. But they found a good
audience on 14.313. After all where could you get Donnie Dumbass and his
crowd with the KJI/BLB show and not be in a bobby bin?

It is so bad with that bunch on 313 that they even run the Texas Twit off.

I don't mind a little bit but some in here have gone off the deep end.
There's a lot of good people that don't post here because its a damn nut
house for politics. We should at least try to make this a good forum and

that doesn't mean we can't b.s. We all just need to be cool and respect each other a little more.

Your phone can be monitored up to about thirty feet from your phone even if your phone is hung up/turned off.I once read something about that at www.cryptome.org www.cryptome.org/index.html (scroll wayyyyyyy on down at cryptome.org and click on,TEMPEST)

This call may be monitored for quality assurance.(or something like that) There is an article at www.rense.com about that.

I like the old style CRT tv sets and they are the only kind of tv sets I use and I will ever buy and use.I keep my phone unplugged except when I want to use it.

Dialup/Broadband, www.softwar.net

Don't be Dumb like them Canadians are,be Super Smart Super Intelligent like this old Mississippi boy (that's me) is.

What I want to know is,,,, How is it possible for Canadians to get a life and be proud?

Piccolo's manager said,,,, Now see here!,who said that? A hand shot up in the dark wayyyyy back there in the audience,,,, a voice said,,,, I am not the one who called that Piccolo player a M..... F..... what I want to know is whoever called that M..... F..... a Piccolo player?

How can it possibly chase anyone away? They are not required to read a darn thing they don't want to read, and whatever is posted here in no way puts any kind of lock on their keyboard.

They are still free to post as they please. So, if someone posts about GWB or Klintoon that in no way stops anyone from talking about the new R80 from Ucom, or from posting their latest log of Nibi-Nibi.

Sure it does. Most people don't want an argument, which is what most of
the political posts are all about. They don't want to get flamed either
and when they read the news group full of off topic political flame
posts they will stay away from the news group.

So the result is you are left with a bunch of morons generating the
majority of the posts and people with thick skins who still use the news
group as intended in the minority. This is exactly where this news group
is right now. Soon it will look like one of the alt groups if it doesn't
already.

No it doesn't. No one is being 'chased'. No one has a had a lock placed on their keyboard.

> Most people don't want an argument, which is what most of
> the political posts are all about.

No one is being forced into an argument.

> They don't want to get flamed either

That's their choice, but no one is being 'chased' and if they feel as though they are indeed being chased off then I would strongly suggest some psychological counselling 'cause they obviously have 'issues'.

Yes, and as I've stated several times already, that's their choice. However, no one is running them off, chasing them off, or putting a lock on their keyboard.

> You got to admit that most of these political posts
> amount to shit and accomplish nothing.

That may indeed be true, however it has nothing to do with anyone being 'run off'.

0130-0230 Iraq in English to North America is heard here in MN most nights, listenable strength some nights, no interference. They often ID as Voice of Justice, though many publications just show it as Voice of Iran. georgesmn

Yep, 1830-1900 on 12105 direct from Greece has been heard here many times. Also relayed by VOA on Saturdays 1400-1500, very strong. They may also still have a VOA relay English broadcast on Sundays, it was on 17705 from Delano, California, can't remember what time. georgesmn

People are free to spend their money as they see fit, but I do think the bidding is too high given that a new Quantum QX Pro Loop is $300 NEW.

It's always interesting to see just HOW high these people will bid, though.

I did not mean "chased" as in someone being pursued I meant it as "
chased off" in that they do not want to deal with the malcontents
posting off topic and flaming everyone that posts here. Plenty of
people don't want to deal with the nonsense posted in this news group. A
psychological examination is not necessary to determine what one wants
or does not want.

417. Voice of Russia

Newsgroup: rec.radio.shortwave
Date: 2005-10-03 01:56:40 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-E752DA.18564002102005@newsclstr02.news.prodigy.com>
Source record: 42579

Voice of Russia is putting a very good signal tonight. Big transmitter on 15,595 KHz. Some times the modulation is weak then picks back up. They have a music program on right now that reminds me one on Radio New Zealand.

New Zealand noisy on 15,720 KHz and Australia very good on 17,715 and 17,795 KHz.

Australia has been very good on 21,740 KHz the last two days.

VOR is starting to fade out now. I don't normally listen to them but I
it seems to me that their signal should be good right now and it not
anymore. Conditions look OK thought the space weather magnetic field is
against the earths.

Visited the USS Missouri at Pearl Harbor last week. In the giant ship's communication center, I saw an R-390A prominently featured in the radio stack. This ship was refitted during the 80's for $500 million. I suppose the Collins was integrated at that time. I have a picture if anyone's interested.

Ahhh, the mighty Imam speaks. Pray tell, from which "Good Book" do you get your propaganda? Are you taking a page from Delay's book? You know the one where you claim to be a Christian and yet get your hands all dirty? Or GWB's where you get to pretend that you are signatories to various treaties and trade agreements and disregard them when it suits your petty minded interests?

> Thus "JB" 'you' are hence forth a Cana-Duh-ian :
> Another one of the whinnying voices from CanaDuh that

Right now, Imam, your country looks very much like the US of Disarray. Those who believe in the US of Disarray's mission are few and far between these days.

> "JB" - Get a Life -and- Be Proud To Be A Canadian !
> "JB" - Speak In Praise of Canada and Canadians !
> "JB" - Kindly Leave What Is Good or Bad About the USA
> - - - To Us Americans [.]

See, Imam, that is where I have a problem with your hypocrisy. Your "Good or Bad" extends well beyond your borders but if you are willing to keep it in your pants and try not to shaft other countries then I could be tempted to give your country a chance. How much innocent blood has been spilt by regimes that your country installed? Does your beliefs allow for the wholesale slaughter of innocents? Since when did your country become "God"? Wisdom and knowledge don't seem to be the US of Disarray's forte these days.

> Proud To Say : I Am An American !
> .
> God {Allah} Bless the USA - amen, Amen. and AMEN !

Imam, your country has become a pale imitation of what it once was. But may God bless the true spirit of the USA.

The Imam (RHF) has some trouble confronting the facts. Inability to deal with reality results in frustration and a persecution complex ;-).

Fortunately, he is in the minority.

Raincoat Charlie was one of mine..I loved it when Vic and the boys went off the deep end, crying about "illegal jammers". I loved the Hitler speeches and Nazi music playing in the background too.

I remember that pinhead ahole "Joe", that excitedly came on one night, announcing he "found a nest of jews" on some other freq. He died soon after, hopefully in great pain.

The good old days is right!

> Who has used them all, but long ago!

I am reading his question for the point of view of DF'ing ANY radio signal in an effort to gain knowledge of it's possible source.

VOR is a deliberately phase modulated signal, as is TACAN. Not much point DF'ing them from a ground station since their location is known, or can be found from the Ident. Now UHF DF certainly has some applications, particularly if DX'ing FM broadcast stations, but so would a yagi and a rotator.

Since the newsgroup is r.r.shortwave, then DF'ing shortwave seems to me to be the topic. Here is another method worth trying, particularly because of it's compact size. http://www.qsl.net/dj3tz/loop1.html

And a significant point is that a "radio compass" was so simple, because
it was at a time when applications for radio was relatively small. The
more complicated systems came later, when things had built up and a
need for something better came along.

Direction finding has come to mean tracking down an unknown station, but
in the case of a Radio Compass the scheme is identical, using a directional
antenna and a basic receiver, but you pick a station you know the location
of, so when you point to it you know you are going the right direction
(unless you pick the wrong side of the null, and go 180 degrees in
the wrong direction, but there were ways of fixing that).

While there were beacon stations set up for Radio COmpass use, I gather
it was not uncommon to use existing broadcast stations for the purpose.

Were talking sixty to seventy years ago when they first started using
Radio Compasses.

Yes it is that simple. MP also assumes that the terrorists WANT to listen to RA and own a shortwave radio. Radio Australia and ABC already have a number of satellite radio and tv feeds, FM outlets etc in the area. The problem goes back to the madrassars and their blinkered education.

That's right. A Radio compass is like DF'ing in reverse. I know where you
are, so where am I?
ADF is still an approved and popular form of aircraft navigation. The VLF
beacons are maintained for that purpose.

Whilst broadcast stations were also used for navigation, it was not really a
recomended practice. The radiation pattern could change, but more
importantly, without a proper identification, it was possible to DF on the
wrong transmitter, sharing the same frequency. If they carried the same
music program, there may be no way to know until the pilot is truly lost.
That said, the ABC station near us is called 2RN and is the inbound
checkpoint. That's mostly because it is a big thing with flashing lights.

Where is SR located? If he tells us his home town or local airport, we'll find a beacon for him to practice on.

Brad.

I notice something interesting about this radio. Their are terminal for
6 meters. Throughout the last 10 years when I had scanned the 6 meters
on my scanner, I do not think I had never picked up any hams. (BTW I am
in the New York City area) Yes it is a very short band and it might be
more related to 2 meters, I would think.

So why would Hammarlund go through the effort to add terminals on the
rear of this radio. My only guess is that at the time hams were using
the 6 meters a lot more.

Also, this radio does not seem to pick up much on the 21-21.6 and 28-30
bands.

I have a reprint copy of the manual. I was reading the part of the SEND
RECEIVE CAL button. And somehow this has something to do with something
called BREAK-IN RELAY. (There is a relay female chassis connector at
the rear.)

Because of this can this radio make some kind of transmission?

Could someone please explain this to me in layman terms.

BTW I love the radio!

Thank you, SR!

Brad I am in Queens New York. Sometimes I like to find beacons when nothing else is on the band.

Within my 10-20 or so radius area their are two big air port and not far from the Atlantic. I noice that on the upper part of the medium band I sometimes pick up a CW beacon. I belive it's a beacon because it repeats it's self in perfect timming. I had not yet decoded the message yet.

Now, MFJ sell an interesting device, it's looks like a black flat box with numbers and red lights on them. The device is suppose to read all beacons nation wide.

Do you know anything about that? And how does this work? And is WWV that voice that gives the UTC on 10000.0 MHZ?

73 SR!

Presumably, this (failure of an) analogy intends to liken water with
guns.

The problem with this failure of an analogy, is that water is almost
never lethal and is even less often used as a weapon, and it would not
be particularly socially dangerous if people carried spray-bottles of
water around for self-defense. :P

Yeah, his analogy was silly, but then any analogy between a beverage
and a device specifically engineered to kill, would have to be
suspicious. :P

So score: no impact in any argument for or against gun control.
Absolutely irrelevent to answering that question.

Let's talk about the responsibility of the head of government to make
sure EVERYTHING works at all levels of government, and to protect us
from forseeable dangers like Hurricane Katrina, with a great deal more
competency than was seen inside FEMA and out.

When the whole system fails, as it did spectacularly in New Orleans,
THEY (all the way up to Bush) MUST be held accountable as well.
(Unless you want us to be unprepared again when a similar threat
emerges in the future. Then by all means, let the Executive branch
slither out of their part of responsibility for purely political
reasons and believe the spin that it's just a few terrible Democrats in
Louisiana that caused the entire system to fail, including many
documented FEMA failures. Show us all you care more about your party
and ideology than you do American and Americans and more about the past
than the future.

Don't let the Feds avoid instituting safeguards like DRILLS to verify that all the states are on-board and ready, and find and iron out all the kinks by practicing *before* an emergency happens?

FEMA pre-Bush was competent. Now it has demonstrated a tendency for incompetence. We need to fix it, and Bush has to be held responsible for not protecting the homeland better, most especially as he tries to claim somehow that he has made America safer... a crazy claim when compared against actual statistics on terror attack totals, but one the neocons refuse to give up.

So sad, we're so far off track as a nation. It's so bad, 2/3 of us actually sense it's off track. And it's as much Bush's fault as any other person in America today.

So yeah, blame Bush.

> Dan

Presumably, this (failure of an) analogy intends to liken water with guns.

The problem with this failure of an analogy, is that water is almost never lethal and is even less often used as a weapon, and it would not be particularly socially dangerous if people carried spray-bottles of water around for self-defense. :P

Yeah, his analogy was silly, but then any analogy between a beverage and a device specifically engineered to kill, would have to be suspicious. :P

So score: no impact in any argument for or against gun control. Absolutely irrelevent to answering that question.

Let's talk about the responsibility of the head of government to make sure EVERYTHING works at all levels of government, and to protect us from forseeable dangers like Hurricane Katrina, with a great deal more competency than was seen inside FEMA and out.

When the whole system fails, as it did spectacularly in New Orleans, THEY (all the way up to Bush) MUST be held accountable as well. (Unless you want us to be unprepared again when a similar threat emerges in the future. Then by all means, let the Executive branch slither out of their part of responsibility for purely political reasons and believe the spin that it's just a few terrible Democrats in Louisiana that caused the entire system to fail, including many documented FEMA failures. Show us all you care more about your party and ideology than you do American and Americans and more about the past than the future.

Don't let the Feds avoid instituting safeguards like DRILLS to verify that all the states are on-board and ready, and find and iron out all the kinks by practicing *before* an emergency happens?

FEMA pre-Bush was competent. Now it has demonstrated a tendency for incompetence. We need to fix it, and Bush has to be held responsible for not protecting the homeland better, most especially as he tries to claim somehow that he has made America safer... a crazy claim when compared against actual statistics on terror attack totals, but one the neocons refuse to give up.

So sad, we're so far off track as a nation. It's so bad, 2/3 of us actually sense it's off track. And it's as much Bush's fault as any other person in America today.

So yeah, blame Bush. You sure had no trouble blaming Clinton for lying about sex and ignoring all the many things he did very well, like building a surplus, ending permanent welfare, and creating jobs, and most especially, working very well with our allies.

Bush can do none of these things well. Turns out he can't even protect us very well even after we gave him his war, his Patriot Act with sweeping new powers, a reorganization of intelligence into a new department, and when the chips are down, Homeland Security was a no-show for two days.

Talk about miserable failure.

Bush's chickens are starting to come home to roost, in the form of increased violent political instability throughout the world, badly dysfunctional foreign relations even with most allies, dissent and conflict as the dividers have done their best to dis-unite us as a people, just as Bush claimed he wouldn't.

At some point you have to look a fraud in the face and say "we see you're a fraud, playing us for fools. It's time you dealt honestly with the American people. Too many of us believe nothing you say any longer, and that IN ITSELF is in indictment of our miserable excuse for a President, George W. Bush.

Wood alcohol is methanol. Grain alcohol is ethanol. Most
rubbing alcohol is isopropanol. One, two and three carbon atoms,
respectively.

> Could someone please explain this to me in layman terms.

No, it can not transmit. The "TR-REC-CAL" just provides a switch closure that you can use to put a separate transmitter in the transmit mode. Your "break-in" plug is a hook up for a relay that usually ties in with your antenna change over relay, a device that switches your one antenna between the separate transmitter and the receiver. It is an "interlock" scheme, if you will, that "mutes" or locks out the receiver when you turn on your transmitter (to keep from blowing out the front end of your receiver while transmitting).

A careful look at the hook up diagram in your manual should clarify this a bit more.

> 73 SR!

The Lady on 10MHz is in Hawaii (WWVH), the Man is Ft Collins (WWV). I think the calls are correct. Mostly I hear WWVH and JJY (Japan). Listen around the 1/4 hour marks for an ident. I can hear both WWV's tonight. 30m is open to the USA. Unfortunately it is also being jammed by a bunch of Asian pirates yakking on the same frequency.

The morse code ident on the aircraft beacons is slow enough for you to decipher it one character at a time. You can then go to airnav.com and enter the callsign into their search engine and it should come up with some place local to you.

Take Flushing for an example, they even spell out the Morse for you:

NDB name Hdg/Dist Freq Var ID
BRIDGE 022/12.9 414 12W OGY --- --. -.--
PATERSON 137/17.6 347 12W PNJ .--. -. .---
BABYLON 301/21.4 275 14W BBN -... -... -.
CHATHAM 096/27.2 254 11W CAT -.-. .- -

On a nice quiet winters night I was testing an aircraft ADF and trying to point to a station about 100km south. The needle was flicking back and forth between south and north. When I decoded the mixture of callsigns, instead of SLS (shelleys) I came up with LRE (Longreach.)

Longreach is in northern Queensland and about 1800km away. Now that's not bad DX with a ferrite antenna at 12" off the ground!

I'm not familiar with the MFJ device. Is it a CW Code Reader of some sort?

By the way, the beacon at the top of the MW band is more likely to be a Marine beacon. I have no experience with them, but Google is your friend. There are some Marine beacons at VLF, but most are aircraft.

Let's see, it must be 12 years since I was last in Queens. Wow, time sure flies.

Brad.

Since the Balinese bombers most likely speak Bahasa, Persian might be
considered a waste of time. Radio Australia does transmit in Bahasa.

Brad.

Any definition that doesn't comply with your ideological definition is
always defined as "incoherent, illogical, and irrelevant babble". That's
your problem.

472. Grundig and Eton Not Powering Up-Help!

Newsgroup: rec.radio.shortwave
Date: 2005-10-03 13:07:59 UTC
From: LS <lsnider@gmail.com>
Message-ID: <1128344879.773539.122020@o13g2000cwo.googlegroups.com>
Source record: 42734

Hi Everyone,

I had a Grundig YachtBoy 300 that I bought about 5 years ago. Loved it! However, one day after about two years of sporadic use (only used it maybe three times a year) it just stopped working. I tried to get it to power up and nothing. Then all of a sudden it would work, out of the blue. This happened with battery and AC. I thought it was a rare lemon...

Then a few months ago I bought the eton e100, similar features and size. Loved it for three days and then it would not power up. Again, it would sometimes go on and then most of the time it would not. To make matters worse, I just tried it again and it would not power off-it just stuck there. Nothing would work at all.

In both units I tried replacing the batteries, reset them tons of times, the whole nine yards.

I am so unhappy with Grundig/Eton that I swear never to buy one again (just got a Sony ICF SW35 and it works well so far :)

However, my question is this-am I the only one with this issue? Can anyone guide me to what the possible problem may be?

Thanks

LS

There's another poster here who uses them very extensively. The
science is solid and quite simple. Reverse the polarity of the local
noise and mix it with your main antenna signal and this subtracts the
local noise at your receiver.

Try it for 28 days.

Dear Sierra Club Supporter -

We want first to thank you for taking the time to sign our petition to help protect the Giant Sequoias earlier this year. Thousands of you signed the petition urging President Bush to put an immediate end to U.S. Forest Service plans for commercial logging in the Giant Sequoia National Monument.

Because you took the time to voice your concerns on this issue, we want to update you on some great news regarding the status of the Giant Sequoia Monument.

Earlier this month, a federal judge shut down a 2,000-acre commercial logging project in Giant Sequoia National Monument because the federal government relied on outdated science to justify a controversial timber sale. The timber industry and U.S. Forest Service had argued that the logging was urgently needed for fire prevention, but the environmental groups showed that this was false and charged that the Forest Service had not taken a hard look at the likely harm to the monument and its wildlife that the extensive logging would cause.

This decision helps ensure that the Giant Sequoia Monument will be protected and can continue to inspire visitors for generations to come, and we thank you again for taking the time to voice your opinion.

For more information on this latest development, please visit the Environmental Law Program section of our website.

Sincerely,

Pat Gallagher
Environmental Law Program Director
Sierra Club

If lack the space for a more traditional antenna, a Wellbrook loop might be a good choice:

http://www.wellbrook.uk.com/

You might not need the rotor, depending on which antenna you buy and how noisy your surroundings are.

If you have any questions, just give Andy Ikin a call.

The latter is old information. Since that announcement, the company
has decided to employ solar panels over about 1/2 acre with a propane
generator (not diesel) as backup power or cloudy day supplement.

This is also what our BZA approved.

Hopefully this clears up the confusion.

The diesel is history that will never be.

Hi,

I'm having great difficulty getting hold of a Sony AN-LP1 active antenna in the UK. Can anyone advise on where I can get one of these from? I've emailed Sony Style UK to see what they say, but in the meantime any pointers would be gratefully received. I couldn't find any on eBay either.

The only source I've found so far, Japan Direct, want $140 for this antenna plus $42 for shipping! Ouch!

I hear that this particular active antenna would work great with my newly acquired Sony ICF-SW7600GR receiver.

TIA

JR

>cuhulin

I visited the Missouri when it was moored in San Francisco. (I think there were plans to put it there permanently, which might have been a good tourist attraction - as if SF needs more tourist attractions - but there were too many antis.)

Of course, most famously, it is where the Emperor of Japan signed the surrender papers in 1945 ending WWII - Appamatox Court House with rudders.

(At least the Hiroshima [first] atom bomb probably saved more Japanese lives [noit to mention the Americans who would have been killed in an invasion] than the number of people it killed although it was also a warning to Stalin which, thanks to his spies, he didn't really need.)

Has the Missouri ever actually been to Missouri? Getting a battleship a thousand or more miles up a river, even the mighty Mississippi (without taking it apart) must be impossible.

Remember the nom de plume of Samuel Clemens. 12 feet deep (Mark Twain) was a good depth if you were piloting a riverboat on the Mississippi in the middle of the 19th century.

> bands.
>
Different bands have different propagation. The lower bands are lousy in the day time, and great at night. The higher bands reverse the process. But also, as the frequency increases the more sporadic the good propagation. So ten meters, 28-29.7MHz, will be fairly dead much of the time, until good propagation comes along. The same with 15Meters, 21MHz, though to a lesser extent, and the moreso on six meters. When conditions are good, then they can be really good.

If a band is not being used much locally, then you won't hear anything until conditions are good. And you have to listen quite a bit to hit the good times. It's like good DX on the FM broadcast band (though since it's even higher in frequency than 50MHz, it's even less common); when it happens you can hear stations so far away, but it comes suddenly and disappears as fast. If you weren't listening to the radio at that time, and listening to a non-local station, then you might never know that anything had happened.

Even up to forty years ago, six meters was often the band of choice for those who used VHF. There was the US Technician license that only allowed for operation at 50MHz and up (and here in Canada, you could only use voice with the basic license at 50MHz and up). Since 50MHz was the lowest band useable by the Technician class licenses, they tended to use it. Because as uncommon as good propagation was, it was more common than at 2meters. And when conditions were good, you could work fairly good distances, and with relatively little equipment. Plus, there was a lot of simple and low power commercial gear manufactured for the band, so the band did tend to be used for local use. Ironically, when a band is in regular use it means people are more likely to notice the good propagation, because they are there already.

So it made a lot of sense to add the 6meter band to a ham-band only receiver. If nothing else, it was a feature one could boast about over the other receivers didn't cover the band. People could buy the receiver, and not need a converter to receive six meters. They could then build or buy a small and cheap transmitter, and be on the air.

Another good reason for adding is is that the HF ham bands are relatively small, with the largest of the bunch being the not quite 2MHz of the 10meter band. All the VHF and UHF bands are larger. The common way to receive higher bands was to build or buy a converter that translated those higher bands down to a frequency range your receiver could tune. But with an HF-only ham band receiver, the biggest slice was about 2MHz. Adding six meters provided a 4MHz band, which was better, and that provided a band that did have a wider range. So adding the band gave some VHF coverage, and set the stage for the reception of higher bands.

No.
Since it's a ham band only receiver, pretty much everyone using it would be pairing it with a transmitter. The switch was there to manipulate the receiver so it wouldn't be bothered by the nearby transmitter, and included a means of controlling the transmitter, in one simple switch. If the receiver didn't include it, you'd need a separate switch to take care of switching between receive and transmit.

Some of the work better than others on MW. When you visit the site, you should be able to download details on the different models they have available.

Thanks for your replies.

I do have some carpets that are wool and yes it has been dry (I hate gotten shocks in the past). However, in the second case that would not be the source...didn't have carpets there at all and it was a humid summer :)

I find it odd that both have the same issue. When I looked on ebay I saw others that would not go on either. I just wondered if there was a special trick to getting them back from the dead or whether they had faulty switches.

Tried to find an email for Grundig on their web site, no real luck as it was not clear if they even wanted customers to email them...not a good sign :(

Cheers

LS

Six meters will provide long range DX during the height of the solar cycle - F layer skip
And not dependent on the solar cycle is Sporadic E -- with long range DX -- typically occurs during the summer months and a smaller peak in late winter

There are several other propagation modes as well -- see URL:

http://www.anarc.org/wtfda/propagation.htm

The east coast routinely works Europe on six meters if the band is open. The west coast occaisionally works Europe and routinely works the the Pacific with band openings

With sporadic E it is entirely possible to work all USA states including HI and AL

But the band can be dead for long periods of time. DX is mostly SSB and some CW

However many locations have line of sight operation either simplex or repeaters
Check your repeater guide. Repeaters are FM of course

The packet clusters will alert you as to 6M activity

Also see URL:
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=6072

Not really, I used:

CB fiberglass whip on the roof. With RG 213/U coax about 100 feet, with
4 loop choke.

90 foot dipole each side coil on the window on PVC tubing (home-brew)

TV VHF/UHF on the roof.

Other accessories: MFJ antenna switch box. KOSS headphones, MT Magazine,
Heathkit scope Mr Coffee, cigars and ash tray.

My main sw radio, I use the ICOM R75.

Now, my question then is: So I could better identify All Indian
Station, how do they broadcast to the Americas? Is it in English? Is
it in talk and some music? Or all music? Do they give world news?

BTW what is the most popular or easiest sw station to pick up in Asia?
Other then China Radio International, Voice of Vietnam, Radio Japan and
Radio Taiwan International.

73, SR!

Sounds like a uP lockup issue. Is there a ''reset'' button somewhere?
If not, try removing all power for a few minutes.

Any strong magnetic or RF around? Are you next to the elevator
motors?

Sometimes,on some electronic thingys,if you remove the batteries and
push each button at least two times (that is suppose to somehow reset
the electronic thingy) and then put the batteries back in,that sometimes
works.

When water is outlawed... Only outlaws will have water!

According to his worshipness the royal honorable Louis Farakhan, Bush and other "Whiteys" blew up the levee in New Orleans.

From his Royalness...
"In a tiny town in Mexico, called Tepotzlan, there is a mountain on the top of which is the ruins of a temple dedicated to Quetzalcoatl, the Christ-figure of Central and South America--a mountain which I have climbed several times. However, on the night of September 17, 1985, I was carried up on that mountain, in a vision, with a few friends of mine. As we reached the top of the mountain, a Wheel, or what you call an unidentified flying object, appeared at the side of the mountain and called to me to come up into the Wheel. Three metal legs appeared from the Wheel, giving me the impression that it was going to land, but it never came over the mountain.

Being somewhat afraid, I called to the members of my party to come with me, but a voice came from the Wheel saying, "Not them; just you." I was told to relax and a beam of light came from the Wheel and I was carried up on this beam of light into the Wheel.

I sat next to the pilot; however, I could not see him. I could only feel his presence. As the Wheel lifted off from the side of the mountain, moving at a terrific speed, I know I was being transported to the Mother Wheel, which is a human-built planet-a half-mile by a half-mile that the Honorable Elijah Muhammad had taught us of for nearly 60 years. The pilot, knowing that I was fearful of seeing this great, mechanical object in the sky, maneuvered his craft in such a way that I would not see the Mother Wheel (Plane) and then backed quickly into it and docked in a tunnel. I was escorted by the pilot to a door and admitted into a room."

There may be a connection between Louis Farakhan and the 80's pop group
called Journey...

Fact:
The pop group Journey was an all white band!

Fact:
One of their biggest hit songs was titled "Wheel in the SKY"

Fact:
The definition of a Journey:
The act of traveling from one place to another; a trip.

Is it possible that they are responsible for Louis Farakhans abduction?

All antennas receive better in some directions and worse in others.
The good directions are ''lobes'' the bad directions are ''nulls''.

A loop antenna has killer nulls perpundicular to the plane of the
coils. If you are trying to hear on a channel with more than one
station you can steer the null toward one of the stations and then
just hear the other one. This is the #1 advantage of a loop antenna,
IMHO.

I've been trying to get a QSL out of All India Radio, Gangtok, Sikkim which operates on 3390, since December of last year.

I've sent a report to Gangtok direct, and two reports to Delhi. I've yet to receive a reply.

Today, I tried a report via the net:

http://www.worldcantwait.org/

The World Can't Wait!

Drive Out the Bush Regime!

Mobilize for November 2, 2005

Your government, on the basis of outrageous lies, is waging a murderous and utterly illegitimate war in Iraq, with other countries in their sights.

Your government is openly torturing people, and justifying it.

Your government puts people in jail on the merest suspicion, refusing them lawyers, and either holding them indefinitely or deporting them in the dead of night.

Your government is moving each day closer to a theocracy, where a narrow and hateful brand of Christian fundamentalism will rule.

Your government suppresses the science that doesnï¿½t fit its religious, political and economic agenda, forcing present and future generations to pay a terrible price.

Your government is moving to deny women here, and all over the world, the right to birth control and abortion.

Your government enforces a culture of greed, bigotry, intolerance and ignorance.

People look at all this and think of Hitler ï¿½ and they are right to do so. The Bush regime is setting out to radically remake society very quickly, in a fascist way, and for generations to come. We must act now; the future is in the balance.

Millions and millions are deeply disturbed and outraged by this. They recognize the need for a vehicle to express this outrage, yet they cannot find it; politics as usual cannot meet the enormity of the challenge, and people sense this.

There is not going to be some magical ï¿½pendulum swing.ï¿½ People who steal elections and believe theyï¿½re on a ï¿½mission from Godï¿½ will not go without a fight.

There is not going to be some savior from the Democratic Party. This whole idea of putting our hopes and energies into ï¿½leadersï¿½ who tell us to seek common ground with fascists and religious fanatics is proving every day to be a disaster, and actually serves to demobilize

people.

But silence and paralysis are NOT acceptable. That which you will not resist and mobilize to stop, you will learn ï¿½ or be forced ï¿½ to accept. There is no escaping it: the whole disastrous course of this Bush regime must be STOPPED. And we must take the responsibility to do it.

And there is a way. We are talking about something on a scale that can really make a huge change in this country and in the world. We need more than fighting Bushï¿½s outrages one at a time, constantly losing ground to the whole onslaught. We must, and can, aim to create a political situation where the Bush regimeï¿½s program is repudiated, where Bush himself is driven from office, and where the whole direction he has been taking society is reversed. We, in our millions, must and can take responsibility to change the course of history.

To that end, on November 2, the first anniversary of Bushï¿½s ï¿½re-electionï¿½, we will take the first major step in this by organizing a truly massive day of resistance all over this country. People everywhere will walk out of school, they will take off work, they will come to the downtowns and town squares and set out from there, going through the streets and calling on many more to JOIN US. They will repudiate this criminal regime, making a powerful statement: ï¿½NO! THIS REGIME DOES NOT REPRESENT US! AND WE WILL DRIVE IT OUT!ï¿½

November 2 must be a massive and public proclamation that WE REFUSE TO BE RULED IN THIS WAY. November 2 must call out to the tens of millions more who are now agonizing and disgusted. November 2 will be the beginning ï¿½ a giant first step in forcing Bush to step down, and a powerful announcement that we will not stop until he does so ï¿½ and it will join with and give support and heart to people all over the globe who so urgently need and want this regime to be stopped.

This will not be easy. If we speak the truth, they will try to silence us. If we act, they will try to stop us. But we speak for the majority, here and around the world, and as we get this going we are going to reach out to the people who have been so badly fooled by Bush and we are NOT going to stop.

The point is this: history is full of examples where people who had right on their side fought against tremendous odds and were victorious. And it is also full of examples of people passively hoping to wait it out, only to get swallowed up by a horror beyond what they ever imagined. The future is unwritten. WHICH ONE WE GET IS UP TO US.

The world canï¿½t wait! Drive out the Bush Regime! Mobilize for November 2!

I'm trying to verify at least 10 Indian States so as to qualify for the NASWA Master Subcontinental DXer Award. I currently have 6 QSL'd, and have the Subcontinental DXer Award.

For information about the NASWA Country List and Awards Program see:

Doesn't matter, really. If they've learned anything
since 2000, it's that the current sitting President will
never back down or give up or resign. Just not in
his nature; he doesn't govern by the polls. If he
did, he'd be more like his immediate predecessor.

Like him or hate him, he is who he is, and trying
to make him look bad by a protest like that simply
won't work because he really doesn't care too much.

Source record: 42895

In fact, giant sequoias need fairly frequent fires (at least a few a century, if not more often) to propagate their progeny. Without the heat of a fire, the scales of their cones will not open to release the seeds, and the mineral soil and open forest they require to germinate will not be available.

Sequoia trees are not only generally unharmed by fire due to their thick and only lightly flammable bark, their existence depends upon the heat of the flames. Intense fuel reduction in their groves is tantamount to forced local extinction.

Similar cases are true for other kinds of trees; Sequoiadendron Giganteum is just the most dramatic example.

The Giant Sequoia National Monument, which is an entirely different entity from Sequoia National Park, is also run in a different way. Unlike the park, which is run by NPS/Dept. of the Interior, whose mission and goal is to protect the resource unimpaired, it is run by the Forest Service, which has traditionally been a multiple-use and harvesting agency (except in wilderness areas, where preservation policies are generally stronger). The monument, which preserves most of the remaining sequoia groves not in the parks, also contains a good deal of intermixed and buffer forest, normally the Forest Service's bread and butter when it comes to harvest. I do not envy the Forest Service's resource specialists in this monument - they have a tougher time in many ways than the Park Service, who merely has to protect, or the regular national forests, where preservation is rarely practiced ona large scale and rapacious harvest can often be done with impunity. In the Monument, resource specialists have the balancing act of their lives when they must protect the Sequoia groves *and* provide for some level of harvest. These two conflicting goals give them an overwhelming management obstacle, both politically and in terms of the resource itself.

When walking through some of the the groves in the Monument, it gives an odd feeling to walk among standing sequoia trees with little in between but low shrubs and grasses, compared to what one finds in the fully protected groves such as Giant Forest or Grant Grove or Redwood Mountain Grove. One wonders how much the longevity of the sequoia is owed to the presence of a forest around it to protect from the battering of strong winds in Sierra storms or the direct baking summer sun upon its entire root system. Time will tell, I suppose. One of the oddest groves is Converse Basin, where the Boole Tree, a very large old sequoia named for the foreman of the lumber company, stands alone among a few 100-year old trees and bushes. It is about the most

incongruous sight I have seen, only matched by a few similar spots in the Pacific Northwest where single old giant redcedars have been preserved in the midst of what looks like a war zone.

Other recently-established national monuments, including Mt. St. Helens National Volcanic in WA and Grand Staircase-Escalante in UT, have been modelled on similar frameworks, although St. Helens gets a stronger preservation component than some. If you have never been to these three National Monuments, I urge you to go - they are spectacular, fascinating and have enormous rewards to offer.

UHF DF certainly has some applications, particularly if DX'ing FM broadcast stations, but so would a yagi and a rotator.

It's also useful for homing on UHF NDBs. Pretty hard to put a Yagi and rotator on a Navy aircraft.

6 Meters is right below Channel 2, and is guarenteed to mess up televison
if it's used in your city. That rules out base stations with big antennas,
unless you like fighting with your neighbors.

That's what happened on my Sony ICF-SW7600G. The little slide on the power lock would not properly engage the switch. Fixed by making a small mechanical adjustment.

This R7 is headed for a record price for an Ebay
sale.

Amazing commentary on value of these fantastic receivers.
>From my scanning of R7 Ebay items over the past year, value
for these on average is now up well past $1300 or more for
specimens in excellent condition, with R7As fetching even
higher:

Interesting as well is the fact that no one knows what filters are installed,
nor whether the NB or AUX-7 is installed.

The House is up in 2006, as is 1/3 of the Senate. Bush can't do as
much damage without their help.

What would be really cool is if he sends his gestapo to crack heads on
TV and shock Americans out of their stupor.

Hmmm. If I won this receiver, I could just drive up to CT and pick it up, and by the end of the day it would be sitting right here in my living room.

A nice daydream, but it's more than I can afford at the moment. Beautiful receiver, though I'm disturbed by the seller's ignorance regarding the filters, NB, etc. That would definitely stop me from paying top dollar.

There's really only been one time when I threw caution to the wind on Ebay, and that was when I was bidding on a 7030+ that was put up for auction by a well-known SWLer who often works at Universal Radio. He was able to answer all my questions and I knew I could trust him. It's rare that one can bid with this sort of confidence.

Steve

Did you not read what you sent? The article
specifically mentioned 2005, not 2006. The author(s)
of the article don't want to wait for 2006's elections,
they want him out now. The authors of the article
stopped just short of demanding armed Civil War
to depose him and replace him with someone of
their choosing.

Do a lot of people not like the President? Sure.
Is it deep enough to protest against? For a subset,
probably. Is it deep enough to try to depose him?
Probably not, because once you cross that border
and in the name of saving the Constitution you
throw it out, then you lose all legitimacy. You can't
start claiming "They did it first!" if you're the one
who starts advocating violence; people look at who's
throwing the rocks as the instigators.

I recall the Missouri being moored in SF for a short time. One of the
reasons advanced by the people of that city for not making SF the permanent
home was that in the event of a nuclear missile attack, the Missouri would
be a prime first strike target!!! I was living in the Bay area at the time
and could not believe that this ludicrous argument was put forth.

Ron
It would have been a great tourist attraction.

Mike - Sequoia trees really do withstand fires beautifully - it takes a particularly bad fire to kill one, and most lightning-caused forest fires that naturally sweep through a grove every 10 to 50 years does not reach an intensity to do much more than superficially scorch the big trees. And, as I've already explained, their reproduction cannot occur without it.

No, they will not chop down any large trees (which is defined, IIRC, as trees greater than about 60" diameter at breast height) - they are all protected under the Monument designation. It is the trees between the big ones that would be taken, mostly firs and sugar pines.

Problem is, a sequoia forest is more than sequoia trees - it is an elaborate fabric of living things, many of which depend upon each other for support, biologically, chemically and physically. Just like you require oxygen to breathe, food with various nutrients to grow and survive, and mechanical support structures to clothe and house you, so do the things in the forest require similar and analogous features. You can argue and name-call if you like, but no living thing survives without the input and support of dozens, hundreds, thousands of others both far and near. Sequoia trees may seem so big and sturdy and durable that they could survive on their own (they certainly can withstand most fires) - and sometimes, people feel the same about themselves - but at some point, pulling enough bricks out of the house will make it fall.

This isn't eco-nazi stuff - it happens every year in places around the world.

Her'e how it's done.. They clearcut everything; mile after mile after
mile
Up steep slopes, down into valleys, rught up to the highways.. where
they leave a strip of trees..

They might leave a tree or two " for reseeding " the area. These just
blow down, lacking the protection of the rest of the forest.

When it rains, the whole thing turns into Mud, crashing into towns at
the base of slopes, clogging streams, polluting reservoirs, washing out
highways..

along with the houses of the very people hired to do the clearcutting;
and anyone inside said house.

And who picks up the Bill? The taxpayers.

"Eco Nazis " ?

- You don't know what your talking about..

Dickead? Damn, you've certainly more than just an antenna problem.

The same huh? That's nice I suppose, but do you actually know how to use them?

I own at least over two hundred radios.(probally more like over three hundred radios,,, I never counted noses before) You probally don't own so much as one single one of the radios like I own.And,I am not going to go to the trouble of digging them out (you can't see the tree for the forest) of my foot lockers,my closets,my wash room,my den,my old shed in my back yard,scattered all over in every room (even my bathroom and kitchen too) of my house for you to compare.I have gotten wayyyyy too fat and lazy to even think about it.I sent some money to somebody early this afternoon,today for a radio.

The martial music came from Walter. Perfect clean audio with great music.
Unfortunatly a no-no on ham radio.

I read your message. If you get this message on time, I am getting a
station that sound like Indian music. Around Bettween 7.15 and 7.2 am.

Sorry but I am using my Hammarlund 170. The dial is hard to read.

SR

Then why don't you check with your R75... then you can find the correct
frequency.

Properly maintained, that bandswitch will outlive the mechanical encoders in
today's radios.
Sold my R7 and NB (no add filters) for $600 6 years back. Although it was a
nice RX and had better PBT than today's RX, I really do not miss it.
Now, the Davco DR-30, will be buried with me:

Aybout ten years ago,along about O' dark thutty at night time,(Midnightttttt,,,, me and the blues) I was standing (www.devilfinder.com Loretta Lynn Standing Room Only) in a place in the French Quarter,N'Awlins,on Bourbon Street.(I think it was called the Cat's Meow,or something like that) One of them discoteque kind of places where you can get on the stage and and sing anything and it's picked up on the sound system,, radio,sort of like) and there were about five or six steps that lead up to another floor level in there.Two absolutely beautifull wimmins from Belgium was sitting up there and one of them tapped me on my right hand shoulder,,, she said,,, I like your Goatee.

That's a cool radio. If I ever decide to get funky with an old school
radio again it'll likely be an R-388 that I stumble across (I'm not
going to pay E-Bay prices for one). I've had the Hallis and couple
390As and have an NC-125 in the garage.

The bands are so sucky so often it's hard to stay focused.

Recently bought one of these used. All works fine except the antenna was broken in half, now fixed, and the four leads (red/white/black/green) were torn from their solder pads.
Would anyone know the proper connection for these leads. I do have the schematic but nothing is indicated on it.
Thanks in advance. Oh, I did try the Google group already to no avail.

Me again:
No he was impeached on two counts, grand jury perjury (228-206) and obstruction of justice (221-212), with the votes split along party lines. The Senate Republicans, however, were unable to gather enough support to achieve the two-thirds majority required for his conviction. On Feb. 12, 1999, the Senate acquitted President Clinton on both counts. The perjury charge failed by a vote of 55-45, with 10 Republicans voting against impeachment along with all 45 Democrats. The obstruction of justice vote was 50-50, with 5 Republicans breaking ranks to vote against impeachment.

Yep Uncle Walter had a fine collection of march music and a very hi-fi transmitter. Sounded great. Not Walter, the music.

There was the night I was driving the width of Tennessee on I-40 listening to 3950 on the FT-900. Walter ranted till dawn (literally) in one of his drunken rampages.

Sir Sidney was the one who played Anchors Aweigh and the theme to Hogan's Heroes.

Dag-nabbit somebody bring back the good old days.

Hey: It was one of those moments when a swl all of the sudden find
something on the airwaves and gets excited. By the time I would of
connected my R75, which was put away, the broadcast could of disappeared.

Considering the effort, it was only something to share.

The story behind the choice of the USS Missouri as the ship used to accept the Japanese surrender is interesting: FDR had chosen the USS Pennsylvania for that purpose before he died since there was no USS New York (his state) and Penn was the nearesty state with a battleship. After FDR died and Truman became president, Harry changed the designated ship to the USS Missouri for the obvious reason that he was from that state. Presidential privilege!

I have a very nice R-388. The radio is pretty sensitive and very stable after only a few minutes, unlike the Hammarlunds which drift for hours. It's also quite accurate for the day. You can dial a station right to the KHz and it'll be there. You can also, as Peter Maus warned me a long time ago, develop a strong right arm cranking that band change knob.

So why not make it a shortwave prayer.

I am praying that webcasting is a passing fad, and that international shortwave broadcasting will make a huge comeback.

When the bands go long, you non-believers will know it worked.

Oops - bad time to sell the R4c. Oh well, too late now. Shipped it today.

Hope my prayer works for the rest of you.

Most likely the CAl position turns on small quartz crystal osciallator
with a 100Khz crystal. It generates harmonics at 100Khz intervals, and
isued to calibrate the dial on the radio. Turn it on, set the receiver
to CW, and zero beat the calibrator signal, adjust the tuning dial
accordingly. It makes the dial readout more accurate.

You don't want it on all the time, because it will wipe out any signal
you reall want to hear that is close to a multiple of 100Khz.

Many receivers have a provision to put them into standby by remote
control. The remote control was often provided by a relay.
In a PTT or VOX operationg, the transmitter would provide a signal to
either activate a relay, or command the receiver into standby when the
transmitter came on, and take it out of standby, back into receive
when the transmitter went off. This was frequently called break-in
operation, and is much easier and faster than turning the receiver to
standby, turning on the transmitter (even with PTT), turning off the
transmitter and turning the receiver back on.

. Even with a T/R switch in place, it would be rare to be able to
provide enough isolation to prevent the receiver from 'hearing" the
transmitter, hence the need to take the receiver effectively offline

in standby..

'Send' just puts the receiver in standby usually

It's nice to see the younger generation taking an interest in Indian music. My advice to you, SR: avoid the Bollywood garbage.

Since you're in the NYC area, I suggest you make a trip to Jackson Heights, NJ, visit one or two of the Indian music stores there, and get yourself some CDs of Indian classical music. I would recommend Shiv Kumar Sharma, India's foremost santur maestro.

Have fun with your radios, but don't neglect your studies.

Received a Radio Canada International "60th Anniversary of RCI" QSL Card for a report on 15 August 2005, 9660 Khz (via Yamata, Japan), 12:00-12:30 UTC in English, SINPO 44444 in 6 weeks for a postal mail report. No Reply Postage required.

Also received a 60th Anniversary mouse mat, 60th Anniversary pen that lights up when you write, 60th Anniversary badge, 60th Anniversary sticker/decal plus RCI bookmarks and schedules. A very nice package. Verification Signer was Bill Westenhaver.

Station address is:

Radio Canada International
P. O. Box 6000
MONTREAL H3C 3A8
CANADA

Web: www.rcinet.ca

PS: Bill volunteers as the QSL Manager for RCI and he should be congratulated for his work on keeping RCI DXer/SWL friendly. Thanks Bill.

It would be great if people wrote about their thoughts on advertising on shortwave. How effective is it?

I've only heard the odd survivalist merchandise and shortwave parts dealer advertising on shows. Are there others?

How can people know the number of listeners they have on shortwave?

Etc, etc...

Yes he does. The Katrina aftermath was a good example. He saw the bad
numbers and decided to throw a $200 billion party to be popular again.

> If he
> did, he'd be more like his immediate predecessor.

If he was anything like his predecessor we wouldn't be in a trillion dollar
debt sinkhole.

Suicide in a parking lot by bomb?

Yeah, that happens.

They have to say it was a ''suicide'' because if it was a terrorist
act gone awry that means ''fighting them there'' ain't workin'.

Hi Brian;
I have the pics hosted on my own site but that does'nt get any lookers to
the Ebay site if then would like to bid.
I know there are some that don't like these posts but they are free NOT to
look at them via a Supplied filter.
I am trying to limit the amount of these posts but it's hard.
Thanks for your suggestion.
Rich

well if you count each Bible Beater out there in Shortwave Land, there
are doubtless tens of thousands of Advertizers..

I've heard Quack " Health " Products advertized
(Cures CANCER ! (yeah, right))

things that will turn you grey (Collodial Silver)
,
as well as gold coins..
several Shortwave repair places.. a record store in Pittsburg, and a
restaurant down in Mexico..

Think each station has some kind of idea as to who listens & how many
listeners they have.

Since there's very little commercial broadcasting, there's little
advertising.

Shortwave broadcasting as we know is more about a country wanting to
reach beyond it's borders, either to reach citizens abroad, or people
who might be curious about the country. It's generally paid for
by the governments of the countries.

Commercial shortwave broadcasting is pretty limited. Not only is
it not common, but it is not and never will be a mainstream medium.
Hence you won't see big name advertisers on shortwave, and you will
generally get advertisers who have little choice beyond shortwave
advertising.

In other words, they may not care all that much how many listeners,
they simply hope they will reach an audience if they advertise.

So you get the bible related material, and you get the survivalist
stuff.

Some shows have been on SW radio for years, so I guess SW radio advertising is effective enough for that. SW advertising might be effective, but I doubt it's lucrative. SW radio time is cheap.

>
> I've only heard the odd survivalist merchandise and shortwave parts
> dealer advertising on shows. Are there others?

The biggest "advertisers" on SW are preachers asking for donations. Quack medicine shows are also commonly heard.

>
> How can people know the number of listeners they have on shortwave?

They don't have to know. It's not like big time radio in which a station hustles up advertisers and prices based on ratings. The commercial SW radio stations sell the air time directly to the producers of the radio show. It's up to those who come up with the show to also come up with the money.

If people send them money, the pitch is working. Non-contributing listerners, such as myself, don't do the SW host a damn bit of good, anyway.

>
> Etc, etc...
>

There were a couple of attempts to start advertiser supported SW stations in recent history. KUSW came and went, almost in the blink of an eye. WRNO held out longer but it was supporting itself by selling programming long before it faded away.

The Few - The Proud - The Brave - The Sequoias !
{ Once There Were Giants ! - That Stood Among Us. } <

RHF - IIRC, you spent a bit of time up in the Sierra foothills (maybe still do ?)

Did you go up to Calaveras Big Trees at all? The South Grove there is very wild and splendid. A couple of those trees would be a fine place to hang a really long quiet wire (relevancy to topic ;-) Maybe a 4,000-footer between the Agassiz tree and Old Columbus...you'd hear the Big Bang with that set-up.

Yes Bruce, but logging a few trees is not going to damage the forest. The
forestery practices of today are much less invasive. We need wood, period.
It has to come from somewhere. Ask the people in California how particulary
bad their fires have been as late.

That isnt used much these days, especially in designated forests. This
probably does happen on Potlatch owned land though they dont leave a few
trees to reseed, the replant millions of new trees.

The fires here are scrub brush. When we do have forest fires they are
made much worse by beetle weakened pine trees which go up like an
incendiary bomb. The beetles are spreading due to climate change.

For many years we have been seeking federal help to remove the dead
trees. It's cheaper than making people whole after a wild fire.

CJBC 860 am)is the main French-speaking station in Ontario and it has
strong political connections with Ottawa and Quebec giving it a
protected status. Francophones all over the world, but especially in
Ontario view it as "their" station. The French
(from Canada, not France) are especially vigilant about their rights.
How could there be trouble with the French if there was interference?
Let me count the ways: 1. They would use any interference to show that
Ottawa is not able to protect French rights. 2.They would send a
protest to Washington via their excellent political connections.(They
claim to be a free and independent state within the Canadian
confederation and maintain external agents similar to a sovereign
country). 3.They would sue under some UN agency (ITU?). 4.If aroused,
they would picket US embassies all over the French-speaking world
(Francophonie). 5. They could use this as one cause among many to
threaten to secede from Canada (It wouldn't be the first time and
secession is always bubbling in the background). 6. And there would be
many other things that come quickly to the Gallic mind.
I expect that the antenna patterns will be examined by existing
agreements between Canada and the US as many US stations change their
pattern at night to protect Canadian stations (and vice-versa) so it is
unlikely that their will be a problem. It would make a good plot for a
movie, though.

When you finally get to a live person, tell them that you also may be recording the conversation "for quality assurance purposes". It also works wonders on those calls from the telemarketers that ignore the "Do Not Call" lists.

>Yes Bruce, but logging a few trees is not going to damage the forest.<

True, if it is done properly. This is not alwasy the case, and even when the Forest Service apoproves a sustainable forestry plan, the lumber companies wil sometimes "cheat."

> The forestery practices of today are much less invasive.<

Sometimes yes, sometimes no. Massive clearcuts are still on the agenda in some locations.

There is also the issue of replenishment of soils in mountainous areas where many of the harvest areas are located. The soils there (like the Sierra and Cascade mountains) are often thin and require the presence of decaying standing and down trees to keep that cycle going - take way the soil of the future, and the trees and habitat and lumber of the future go with it.

> We need wood, period. <

Sadly, this is true - too many people, though, and pretty soon your lumber is gone. We have been able to keep up to 300,000,000 people supplied, so far, with wood - but as that value keeps going up steadily due to immigration and the forested area keep declining, at some piont we're gonna be plumb out.

>It has to come from somewhere.<

My previous point exactly.

> Ask the people in California how particulary
bad their fires have been as late. <

I live here too. I know that fires can be really bad. I also know that people who live in and near the forests live there precisely because they like living near the forest. You can't have your cake and eat it too. If you live in California, you gotta be ready for fire and earthquakes, just like the folks in Louisiana have to be ready for hurricanes and Oklahomans gotta be ready for twisters.

One more thing, too, is that the Sequoia groves are not really near many developed areas. Logging there for fire suppression is to preserve the adjacent unlogged areas for future harvest - no other reason. Ultimately, the Sequoia groves will be less than than what they have been, because a complete Sequoia Grove includes a full panoply of non-sequoia flora and fauna.

Hardly. If anything, $200B is probably on the small
side for a complete rebuilding, and if you've learned
anything about government, throwing money at the
problem doesn't solve anything. (Kudos to IBM
for the great recent commercials about that.)

Besides, if he did govern by the polls, we'd be out
of Iraq and Afganistan by now.

Yeah, unlucky for him that the Y2K bug spurred tons
of investment prior to 2000, cranking the economic
engine bigtime. It just sucked that that investment
ended right after 2000 turned the corner. Oh, and the
Internet Bubble crashing in March of 2000 just sucked,
too.

And that the soccer moms like SUVs just sucks,
too.

Source record: 42982

Most ethanol in Australia is made from starch, which in turn comes from wheat. In other words, this is a plan to run our cars on food when half the world is starving.

Ethanol not the answer: Kohler

ALAN KOHLER: I must be missing something with ethanol. This week, the Prime Minister, Mr Howard, put Australia's oil companies in a room and wouldn't let them out until they agreed that his target of 350 megalitres of ethanol production by 2010 was achievable. They didn't commit to it but they agreed it could be done.

Most ethanol in Australia is made from starch, which in turn comes from wheat. In other words, this is a plan to run our cars on food when half the world is starving. Ethanol costs more to make than petrol, so it needs subsidies from the Government estimated at $118 million a year.

The wheat is brought to Nowra from western NSW by trucks that burn diesel. It's then put through an eight-stage process that uses steam at each stage. The steam is generated by burning coal.

The report of the government task force on biofuels is equivocal, to say the least, about the environmental and cost benefits of ethanol. It says the principal benefit of the policy is regional development - not just a benefit but the main one. That's because a new plant has to be built, providing 648 jobs. It will use grain and molasses as feed stock - more food in the fuel tank.

Not mentioned in the report is the name Dick Honan, the main beneficiary of this policy. His company, Manildra, produces all the ethanol in Nowra and will make millions from increasing output to 350 megalitres a year. He also seems to be a prime ministerial friend and a big donor to the Liberal Party. Maybe that's what I'm missing.
Kohler

For a conservative, throwing $200 billion at a public rebuild project is
big. I've read conservative columnist that are livid about how he went
about it.
```

>
> Besides, if he did govern by the polls, we'd be out
> of Iraq and Afganistan by now.

Afghanistan, no, because there is no public furor over that. Iraq, well the polls haven't turned south on that one until within the past couple of months. But even that is getting political attention, with the US mounting larger scale attacks to try and squash the insurgency and in trun make the public less against the war.

725. Question - What Is... The Alpha Delta DX-SWL Sloper Antenna ?

Newsgroup: rec.radio.shortwave
Date: 2005-10-04 17:45:32 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1128447932.634391.121990@f14g2000cwb.googlegroups.com>
Source record: 42987

For One and All,
.
Question - What Is... The Alpha Delta DX-SWL Sloper Antenna ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5619
.
ABOUT - The Alpha Delta DX-SWL Sloper Antenna :
http://www.alphadeltacom.com/pg7.htm
http://members.tripod.com/~bpadula/sloper.html
http://tinyurl.com/9cqzn
http://www.universal-radio.com/catalog/sw_ant/0799.html
http://www.universal-radio.com/catalog/sw_ant/0799om.html
.
Is it a true 'pure' Sloper Antenna ? - In a Word "NO" .
.
First - There are those two "Iso-Res" Resonators
aka : Loading Coils. http://www.rys.nl/addxswl_ii.htm
DX-SWL => http://www.alphadeltacom.com/dxswl_ii.htm
.
Then - The SO-239 Jack Connecting and Mounting Point for
the Coax Cable has both the Sloping Wire Antenna Element
+plus+ the Vertical Down-Lead connected to it. Sort of
Kind of 'like' a Dipole (Almost).
http://www.rys.nl/addxswl_ii.htm
http://www.alphadeltacom.com/dxswl_ii.htm
.
But - The Sloping Wire Antenna Element is 60 Feet Long and
the Vertical Down Lead is only 30 Feet Long. So then it
is more 'like' an Off-Center Fed Dipole or Windom Antenna.
http://www.rys.nl/addxswl_ii.htm
http://www.alphadeltacom.com/dxswlii.htm
.
Next - We have the 16 Foot {Matching} Stub as an added feature.
http://www.rys.nl/addxswl_ii.htm
http://www.alphadeltacom.com/dxswlii.htm
.
Plus - It is Sloped at about a 75* Sloping Angle vice 45*.
http://www.rys.nl/addxswl_ii.htm
http://www.alphadeltacom.com/dxswl_ii.htm
.
Finally - The Antenna is configured more 'like' a Top-Fed
Lazy "7" {Seven-on-it's-Side} and uses a Coax Cable as the
Feed-in-Line to the Radio/Receivers.
http://www.rys.nl/addxswl_ii.htm
http://www.alphadeltacom.com/dxswl_ii.htm

.
So the Question Remains :
What Is... The Alpha Delta DX-SWL Sloper Antenna ?
http://www.rys.nl/addxswl_ii.htm
http://www.alphadeltacom.com/dxswl_ii.htm
.

The Answer May Be : el-if-i-no :o)

726. Shortwave Listening (SWL) Antennas made of THHN Insulated Stranded Copper Wire from the Hardware Store

Newsgroup: rec.radio.shortwave
Date: 2005-10-04 18:01:18 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1128448878.884727.129150@g47g2000cwa.googlegroups.com>
Source record: 42988

For One and All,
.
If you are considering using THHN Insulated Stranded Copper
Wire from the Hardware Store for Wire Antenna Elements for
Shortwave Listening (SWL) Antennas.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5620
.
The Size # 14 AWG that is made up of 19 Strands of Wire
works well and can be bought in 500 Foot Rolls.
http://www.qcsupply.com/Products/863.aspx
http://sunwize.com/catalog/images/elect_wire_cable.pdf
.
One 500 Foot Roll of #14 AWG THHN Stranded Copper Wire
weighs about 20 Pounds can make several Antennas.
http://www.wiringproducts.com/?target=dept_198.html
A 100 Foot Long Wire Antenna Element would Weigh about 4 Pounds.
A 150 Foot Long Wire Antenna Element would Weigh about 6 Pounds.
.
Made of a Poly Vinyl Chloride (PVC) covered Annealed (Hardened)
Copper Wire made-up of 19 Strands and protected with an extra
Nylon sheath jacket.
(19 Strands = 1 Center + 6 Core + 12 Outer Twisted)
http://www.acewirecable.com/pdfs/2020.pdf
Note - The Nylon jacket is designed to withstand heat
temperatures of 90*C at 600V. The Stranded Sizes have a
105*C rating for Appliance Wiring use.
.
.
FLEX-WEAVE ANTENNA WIRE :
Then there is the "Cadillac of Aerial Wire"
that is called 'FLEX-WEAVE'.
http://www.davisrf.com/ham1/flexweve.htm
FLEX-WEAVE comes in #14 (168 Strands of #36 Copper Wire)
http://www.davisrf.com/ham1/flexweve.htm
Highly UV Resistant PVC Jackets (Insulatated Covering)
of Clear, Black, and Camouflage Green.
http://www.davisrf.com/ham1/flexweve.htm

Wanna really screw up the tree-huggers? Propose legislation that would ensure that we will return the USA to the number of trees that were here before the continent was widely populated. After the 'huggers push that through, we get to cut down several million trees to return the number of trees to what it was.

Thinks you. Before Europeans arrived, there was a virtually nonstop forest of billions of trees from the eastern seaboard to the Mississippi. In the west were forests where here are now parched grasslands and clearcuts by the millions of acres...including Alaska.

Sure, we have some plantations where of trees grow...But old growth? A tiny fraction of what used to be. The "tree-huggers," as you put it, know this.

The 30 foot section is supposed to act like a tower would in a
'classic' sloper configuration.
> .
>Next - We have the 16 Foot {Matching} Stub as an added feature.
>http://www.rys.nl/addxswl_ii.htm
>http://www.alphadeltacom.com/dxswlii.htm
Not a matching stub, read the manual and you see that while they call
it a stub it is attached to the center conductor and is listed as the
element for 16 - 21 meter bands.
> .
>Plus - It is Sloped at about a 75* Sloping Angle vice 45*.

>http://www.rys.nl/addxswl_ii.htm
>http://www.alphadeltacom.com/dxswl_ii.htm
It is sloped at whatever angle the user can manage, though the manual states 20 - 40 feet with 25 feet being 'best overall'. Haven't bothered to figure out the angle as regardless of what the manual says - users will install based on what they can accomplish at their location.
> .
>Finally - The Antenna is configured more 'like' a Top-Fed

A commercially made wire antenna that is, in my estimation, a bit overpriced - like all other commercially made wire antennas - but it does what is claims. I've used their shortened version and in A/B comparison to an end-fed wire of similar length and similar orientation (note 'similar' not 'same') it was overall no better and no worse. If you feel the need to 'categorize' what it is then call it a hybrid trapped sloper - though AD might be upset for referring to their 'ISO-RES' coils as traps.

Perhaps these plantations will be "old growth" someday.

>Perhaps these plantations will be "old growth" someday<

It's possible, if they are allowed to grow to that age (which typically for a western temperate montane forest is about 200 years plus, if sequoia species are excluded). More likely, they'll be cut at about 40 or 50 years. This is pretty typical up and down the West Coast, in all types of forest.

Even if allowed to grow, plantations are typically one or two kinds of trees, as opposed to a complex mixture. Old Growth forests usually (but not absolutely always, at least in the case of limited instances of coastal redwoods) contain a broad mixture of trees and understory. Understory plants may, however, return...if they are not weeded out by the timber companies as nutrient competition for the trees.

There are forestry companies that have actually done good harvesting for many years. Before being purchased by junk bond king Charles Hurwitz, Pacific Lumber up in Humboldt County, CA, had what was usually considered a sustainable and relatively environmentally-friendly operation in the redwoods and Doug firs, people had jobs and lumber, and animals had homes. Hurwitz changed all that.

Well, they may indeed have ID'd themselves as Air Force Rescue but that does nothing to change the fact that 5696 is a CG channel here in the States.

5696 is also used as a military distress frequency in Australia and New Zealand.

I know all about understory. I own 30 acres in Wisc. that was select cut
about 8-10 years ago and is pretty overgrown, not too bad but its noticable.
Theres a 70 acre parcel next to me that has never been logged and has
virtually no understory to speak of. Another 40 acre parcel by me was clear
cut and is overgrown with scrub making it virtually unpenetratable. The deer
love it though.

Life is not defined in strict terms of black and white;
it is a complex variety of shades of grey. Likewise, most
of the voting populace is not strictly defined as
being "for this" or "anti that," but rather in the
independent middle. Look at LBJ for a definition in
contrasts; LBJ launched the Great Society to try
to cure society's ills, but at the same time he sent
thousands to Vietnam. Another example is Nixon:
he intensified, and then ended the Vietnam war, but
he also opened up China, started the SALT talks
and began Detente, tried to fix medicare and covered
up Watergate. This president, just like all the others,
will be defined as a study in contrasts.

No, most to all of those so called code qualified trouble makers didn't do
CW. They just listened to the new breed of hams, and that cracked them up.

about 8-10 years ago and is pretty overgrown, not too bad but its
noticable.
Theres a 70 acre parcel next to me that has never been logged and has
virtually no understory to speak of. Another 40 acre parcel by me was
clear
cut and is overgrown with scrub making it virtually unpenetratable. The
deer
love it though. <

Interesting! I'm not sure if this is true for you guys up there, but back in New England, forests grow up almost spontaneously. If you leave a field unmowed and uncultivated, it will spring back to an early successional forest within a few years, and be pretty thick after about 15 or 20. Larger trees like the big hardwoods (rock maple, oaks, cherries, beech, elms, nut trees) take longer, as do the yellow pines...but the alders, willows, pussy willows and dry species go bananas fast. Poplar species do well too. In 50 years, though, the richness has returned, if not the absolute size of the trees.

The reason, in large part, is that New England gets plenty of rain during the summer growth season. No such luck here in CA; although some species grow really fast, getting them established is a very hands-on proposition.

I don't know if it's still in use nowdays,but there is/was a very low frequency antenna buried in the ground from coast to coast along the U.S.A./Canadian Border.I read about it in either one of my Popular Science or Popular Mechanics magazines which dates back to the 1950's or 1960's.If I sort of remember,that antenna is intended for U.S.Navy to use.Maybe it is an ULF antenna,I still have that magazine floatin around here somewhere.

THHN insulation is not rated to stand up to UV radiation. After about a
year the outer clear nylon coating will separate and start falling off.
It's will not change how well the antenna works but it looks real bad as
the layer falls off.
If you can get it, THW will hold up a lot better.

HARRIET MIERS OUTSHINES BORK
« Thread Started on Today at 7:09pm »

at

http://www.aussieseek.com

Judge Robert H. Bork has come to represent in many conservative minds
the gold standard of legal sagacity against which provincial upstarts
such as Supreme Court nominee Harriet Miers must be weighed. In truth,
however, Bork provides a poor example of conservative jurisprudence.
Even as simple a phrase as, "the right of the people to keep and bear
arms, shall not be infringed" has long confounded Judge Bork. Harriet
Miers suffers no such confusion.

Over the past six months, only about 1-2x per week. My listening time increases during the winter, when reception improves.

I also like mediumwave DXing a lot in the winter. That's where I cut my radio teeth years ago.

I find it rather interesting that certain sw vintage radio you have a knob called Band Spread. Take the Hallicrafters SX-100. It has two large half moon windows. The one on the right is for the Band Spread. Now their is another knob to select the band, but you still have to tune in on the Band Spread knob. Then you fine tune with the left.

I guess thats how that work. It can get a little confussing. However, I think some how their is an advantage to this.

The Hammarlund 170 does not have this type of Band Spread. I think the Hummarlund 180 and 180 ac has it. Is that correct?

It would really be cool if their was a way to add a frq counter.

SR!

ML,
.
I 'Listen' to one of my Shortwave Radios just about
everyday usually Mornings and Nights. I am simply
a Shortwave "Program" 'Listener' (SWL) .
Mostly the BBC-WS, RCI, ABC, RNZI, VOA, CRI,
RHC, and on occasion a few of the USA originated
Shortwave Broadcasters like WHRI, WEWN, WWRC
etc, Etc. ETC !
.
HOURLY - English Language Shortwave Listner's (SWL) Guide
http://www.anarc.org/naswa/naswa-bin/swlguide.pl
.
NOTE - Just 'Listened' to DXer's Unlimited on RHC
9.550 MHz with Arine Coro and he is talking about
a 40M Band NVIS Antennna.
http://www.radiohc.org/Distributions/
http://www.radiohc.org/Distributions/arnie.html
.
NVIS = Near Vertical Incidence Skywave
http://www.kdscholz.de/dxers-unlimited/2003/2003-10-08.htm
http://www.radiohc.org/Distributions/Dxers/scripts/99-0119.html
.
CO2KK's Practical Low Cost NVIS Antenna System
- by Prof. Arnaldo Coro Antich
http://www.kkn.net/archives/html/QRP-L/1999-01/msg00932.html
.
During the Day I usually always have an AM/MW
Radio on and I am 'Listening' to AM Talk Radio.
Then again I am also an AM/MW Broadcast Program
Listener (BCL) .
.
FWIW - Sometimes during the Day I 'Listen' to
some NPR News and Information FM Radio.
.
In the Evening a couple of Hours of TV 'Listening';
ok sometimes I actually watch the TV.
.
Late at Night while I am Sleeeping I 'Listen' to
Classical Music on FM Radio or XM Satellite
Radio.
.
"IF" - I am in the House - The Radio is "ON" :o)
[I Am A 'Listening Kind-A-Guy :<]

.
OBTW - While I am in the Car Driving Down
the Road-of-Life the AM/FM Radio is "ON" !
and I Am 'Listening' to the Car's Radio.
.
As a matter of fact "Except" when I am
Walking-About or Jogging; or in a Store
Church of where ever; I am 'Listening to
a Radio.
.
As My Daddy Use To Say :
Son - You Can Learn A Lot By Just 'Listening' !
- - - My Daddy Also Use To Say "
On A Clear Night . . .
You Can 'Hear Forever' and Beyond, The BEYOND !

Also, can part from the Hallicrafters SX-100, Hammarlund 170, 180,
180 AC work with each other? How about tubes?

What would be a good book to read for someone who know little about
radio tube? I hope their is a Dummy Book!

And do they still make dial mechanisms and tubes for vintage radio?

SR wrote:

The youngest gal next door to me is thirty years old,but she looks like nineteen years old from about ten feet away because of her body and her face and she is from Mendenhall,Mississippi,I love to hear her talking,her voice is so suave and mellow.She is a brunette and she is an accountant in Byram,Mississippi,Byram is a surburb city,South end of Jackson.The older gal next door to me is thirty seven years old and she works in an office for Bell South in beautifull down town Jackson and she uses some cuss words quite frequently.She is from near Natchez,Mississippi.They drink beer too.I was helping them unload a trailer load of furniture and a washing machine and a electric clothes dryer a little while ago this evening and there are empty glass beer bottles all over inside of that house.I like them two gals.I told them if they get a tv set as big as that mattress,, invite me over.

>
>Etc, etc...

Domestic broadcasts are fairly accurately measured in regard to how many are listening and what their demographics are. I would imagine there might be something similar for shortwave broadcasts, but I don't know for sure. If you're considering buying time slots, I'd get in touch with the station rep who sells the slots, and ask him/her what numbers they can give you.

Basically, you want to match up your product to an audience that wants to buy it. If you're paying for listeners who have no desire to buy your product, you're wasting money.

Talk to the station rep. See what audience figures you can get.

I didn't find any links to a free downloadable copy, but there is a place
you can order one for $14.00 here:

http://www.manualman.com/catalog/news118.htm

Maybe check around on some other shortwave/radio listening forums; perhaps
someone would send you a photocopy of theirs, gratis?

I did find lots of info on that receiver here:
http://www.noobowsystems.com/restorations/icf-5900w/icf-5900w-e.html .
Pretty technical stuff, mostly for the restoration side of things. Not sure
if you need that much info, but thought I'd mention it anyway.

The "equality of all" is a naive myth which serves mainly to perpetuate mediocrity in the human race. "....that all men are created equal" makes a nice sound-bite but even the most casual examination of any random sample of humankind disproves it beyond any doubt.

It always baffles me that free people buy into the notion of "democratic equality", because in fact the notions of "freedom" and "all are equal" are almost diametrically opposed. If I accept that I am your equal (and that you are mine) then I give up all freedom to be different from you, better than you, or worse than you. I simply WILL NOT give up that freedom, and therefore I reject the notion of "human equality".

If you want to explore the results of real human equality, read Kurt Vonnegut's short story "Harrison Bergeron" at http://instruct.westvalley.edu/lafave/hb.html

Hey gang, yall remember the movie Dr. Strange Love? Well, I was very impress with the photography used in the inside of that aircraft.

I can not figure out how the top officer was able to send the (Doomsday) signal to the aircraft. Then when they got the signal I remember seeing a device with lots off number. I guess it was controled by a radio.

Somehow, the aircraft isolated all incoming signal. I guess that was part of the procedure.

But wasn't their a way for the top officer or president to communicate with the aircraft to put a stop to this?

I have not seen the movie in a while.

I have a very useful large world map, and on each country, their amateur radio prefixes are listed. It's most helpful. I got it for free from a Yaesu rep at a hamfest a couple of years ago. Perhaps check with a local amateur radio dealer, if you have one near you, and ask if they know of any good maps like this.

The newsgroup makes information sharing really painless but I don't know how long the propagation of a post takes from a sender to the majority of users.

I had in mind a real time comparison of signals at wherever the listener may be located.

This would have to be done at a set time which is most convenient to the majority of the users. More set times could be arranged to accommodate those around the globe's varying time zones.

A consensus could be easily worked out.

If 'X' posts a good signal frequency at the fixed time of, say, 03:00 GMT, an almost immediate comparison could be made by whomever is online at the set time and 'A, B and C' could quickly check out the signal and report back.

It might be fun, despite the obvious edge given to unemployables with nothing but time on their hands.

Yep, I've got a copy earlier in the year to see how it compared to other annual frequency guide publications. Overall, it's a nice guide. Perhaps a tad expensive. A plus is that it serves as a handy resource for both broadcast stations and utility stations. For my listening habits, though, I've tended not to use it much. I tend to do much more in way of broadcast listening and not much utility station monitoring. Consequently, I find that, for a quick hard copy frequency guide, I'm better off using the latest ILG database and formatting it into an Excel file (including only the info that I'm interested in having for reference & laying it out horizontally) and printing it up. The summer 05 ILG database printed up to only 238 pages in the Excel file I imported select info into; so it's manageable to do this. For info on broadcast stations, this is the best solution for having the most up to date info on hand, I've found. As regards Klingenfuss as compared to other annually publicated guides, I prefer the blue pages format of PWBR over the Klingenfuss frequency guide. The schedule listing by country certainly beats PWBR (which is quite lacking in this regard). Most importantly, in way of content, Klingenfuss is a worthy guide, although, admittedly, some of the internet schedule databases like ILG and EiBi have the advantage of more regular updates.

If you're really into UTE monitoring, Klingenfuss's dedicated utility radio station guide might be what you're looking for, since the UTE content in the shortwave frequency guide is only a portion of what is contained in the wider UTE guide.

The president did try to communicate but the aircraft was past the
point of being able to be recalled. It's worth viewing the movie
again - not just for the 'radio aspect' but the humor is outstanding.

The band spread is used for the fine tuning. On some communications receivers there is a mark on the main tuning dial to set it to for the various ham band frequencies, and the band spread will be marked with the ham frequencies only on a much more spread out scale than the main tuning scale. When you set the main tuning on the mark for the ham band then the band spread should read correctly for that particular ham band.

Everyone goes to www.lib.utexas.edu/maps

But there are nice radio oriented ones at
www.qsl.net/ei8ic/maps/maps.html

and http://www.ac6v.com/opaids.htm#GCM
where you can get a somewhat useful custom
Great Circle Map (the centre of the world is
your house, thus all radio stations are
lined up to you.

http://www.wm7d.net/az_proj/az_html/azproj.shtml

So, what kind of map did you want and
how are you using it?

Thats right, I call it the map scroll. You may say "hey Steve, are you crazy?"

No, I am not crazy! The idea came to me the other day when I was cleaning out my radio junk closet, I came accross the Panasonic RF 2200. This radio has something that you don't see that much. Considering a late 70's/80's radio, the dial has a scolling feature which looks like something I once saw on an much older radio.

In fact I wonder which was the first radio to come with this?

Ok, why couldn't they connect all of the diffent map a swl/ham may need, and use that scrolling system. All you have to do is scoll over to the next map page. Maybe it could be something you can keep on your desk.

It will save space and come in very handy.

867. International Space Station School Contacts on Oct 5th, 6th 7th

Newsgroup: rec.radio.shortwave
Date: 2005-10-05 07:21:02 UTC
From: g3zhi@hotmail.com
Message-ID: <434e76e1.1719076@news.talktalk.net>
Source record: 43080

International Space Station School Contacts on Oct 5th, 6th 7th

Ham radio ISS school contacts
ARISS Contacts on October 5th, 6th and 7th
Listen to the contacts 'live' on Echolink join the Amsat
conference room number 101377
The International Space Station's Expedition 11 crew may be
winding down. However, their ARISS school contacts will
be very active this week with 3 scheduled sessions.

Each session will be a telebridge conducted in English.
Sessions will be held on:

5 October 16:59 UTC -- Princeton High School, Princeton,
New Jersey
6 October 15:07 UTC -- Ft Hamilton High School, Brooklyn,
NY
7 October 13:33 UTC -- Ridgefield Park High School,
Ridgefield Park, NJ

Princeton High School, Princeton, New Jersey

Station NN1SS in Greenbelt, MD will call NA1SS at
approximately 16:59 UTC.

"Princeton High School is a nationally recognized high
school listed frequently in various publications denoting
outstanding academic achievement. Princeton High School
students excel in the humanities, the fine arts, and the
sciences with students performing in Smetana Hall in
Prague and competing with the US Physics Olympic Team in
Seoul, South Korea. The student body is a diverse group
representing a wide range of interests and backgrounds
within a school community in which 17% of our students
claim one of 38 languages other than English as their
first language."

Students will ask as many of the following questions as
time allows:

1. Are the shapes of the continents as defined as they
appear on maps and globes?
2. How much less time will pass in the ISS than on Earth,
due to relativity?
3. If it weren't for family and friends, would you want to
return to Earth?
4. What are the day-to-day jobs of the space station?

5. How do you sleep?
6. What is the worst situation you've encountered in
space?
7. What luxury do you miss the most?
8. How fast did you travel to exit the earth's atmosphere?
9. How would you describe space when you look outward? If
you space walked, what went through your mind the first
time the airlock opened and you saw space?
10. What does weather look like from space? For instance,
could Hurricane Katrina be seen moving?
11. Can you really see landmarks such as the Great Wall of
China from space?
12. How often do people get space sickness in the ISS?
13. When you come back, what will you miss most?
14. How much of the day is left to yourself and for
sleeping?
15. How much bone and muscle mass will you have lost
through out your trip? How would it be if you went to Mars
for 3 months?
16. What is good or the best on the menu?
17. When were you first interested in space travel?
18. What about space intrigues you and that you do not
understand? What have you been able to learn in your
travels as of yet?
19. My brother wants to be an astronaut. What advise can
you give him?
20. How does your body feel in low gravity? Can you feel
the effect? Is it like floating?

Ft Hamilton High School, Brooklyn, NY

Station VK5ZAI in Kingston SE, South Australia will call
NA1SS at approximately 15:07 UTC.

"Fort Hamilton High School is large urban public school of
5000 students in a suburban setting of Bay Ridge,
Brooklyn. Our school reflects the ethnic diversity of New
York City. We have strong academic programs geared towards college
preparation, with
advanced placement and honors classes in all disciplines. Our
communication with will
benefit our student population, especially the astronomy classes."

Students will ask as many of the following questions as
time allows:

1. What motivated you to go into space?
2. Did your journey so far fulfill your expectations? Why
or why not?
3. How long did you have to train to prepare for your
space flight? What was the most difficult part of your
training?

4. How is the training you received actually different
than traveling into space?
5. How long will you stay at ISS? What type of work will
you be involved with?
6. If you could change one thing about your space mission,
what would it be?
7. Besides your family and home, what do you miss the most
about Earth?
8. How do you spend your free time at the ISS?
9. Do astronauts have to do daily exercises and what type?
10. How long does it take to reach the ISS? How fast is
the shuttle moving after you leave the atmosphere?
11. How are basic life functions like sleeping and
digestion affected by the zero-gravity environment at ISS?
12. How are medical problems such as illness or breaking a
bone dealt with in space?
13. How would you fight a fire in a zero gravity
environment?
14. Are there any plants or animals on the ISS being
experimented on? What type of experiments?
15. Is the supply of oxygen on the ISS constantly being
supplied or is there a machine that produces it?
16. How do you prepare for a space walk? and what special
precautions have to be taken?
17. Does cosmic radiation affect you during your time in
space?
18. Do you believe in the existence of other intelligent
life forms in the universe?
19. What do you eat at the ISS? and How?
20. How many astronauts fit in the ISS?

Ridgefield Park High School, Ridgefield Park, NJ

Station ZS6BTD in Parklands, South Africa will call NA1SS
at approximately 13:33 UTC.

"Ridgefield Park Junior-Senior High School is a 7-12
school of approximately 1,100 students located in
Southeast of Bergen County. The school is a receiving
district for 9-12 grade students from Little Ferry, a
community that borders south west of Ridgefield Park, just
across the Hackensack River."

"The school has a proud history that includes some rather
famous graduates. Among them Ozzie Nelson of Ozzie &
Harriet fame and Bud Lewis, the copilot of the Anola Gay
which dropped the atomic bomb on Hiroshima, which
signaled the end of World War II. It is also the proud alma
mater of Greg Olsen."

Students will ask as many of the following questions as
time allows:

1. I have read that you plan to use your company's miniaturized infrared imager to observe Earth's atmosphere and agricultural crops on this trip. What do you plan to do with this information and how do you foresee it will help us in the future?
2. Why are you turning the infrared camera toward space, and what do you hope to accomplish?
3. What new products do you foresee as the result of the experiments conducted on this mission?
4. Sapna and I won a national chemistry competition based on our ideas for the development of a transdermal nutrient patch. Is anything like this currently being used in the space program or do you foresee its use in the future?
5. I understand that there are three biological experiments for the European Space Agency. Could you please briefly describe them?
6. Can you explain the scientific significance of the experiment on crystal growth in space?
7. Could you explain the significance of the experiments that will test small free-flying satellites, as part of a project called SPHERES?
8. Why is space such a good place to conduct experiments in cell research?
9. Which of the jobs that you performed on board did you like the most and why?
10. Please describe any geographical or man-made features on the Earth that you can see from space.
11. Have you seen any storms like hurricanes or tornadoes from space? What do they look like?
12. What type of problems have you encountered in the space station and how have you solved them?
13. What is the role of Expedition 12?
14. Dr. Olsen, why would a very successful business man and entrepreneur like you want to travel into space?
15. How will this opportunity to experiment in space benefit others (adults, children)?
16. How different do such celestial bodies as the sun, the moon, and any of the planets look from space as compared to how they look from Earth?
17. What would have happened if anyone had gotten seriously sick during the trip?
18. Was all your training in English or did you have to learn Russian to be involved in the program?
19. Do you see yourself as being involved in the U.S.A. space program someday?
20.What are your plans when you return from this Russian mission?

As always, the ISS will be audible to anyone listening in on the 145.80 MHz downlink. Please note, since these are telebridges the ground stations will NOT be near the

school that is contacting the ISS.

Please note, the amateur equipment on the ISS will be
turned off prior to the beginning of the contact. It will
be returned to service as quickly as possible.

Upcoming ARISS events can be found at
http://www.amsat.org/amsat/ariss/news/arissnews.txt
The next scheduled event is with students at Princeton High
School, Princeton, New Jersey on Wednesday, 5 October 2005 at 16:58
UTC.

ARISS is an international educational outreach program partnering the
participating
space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA,
with the AMSAT and
IARU organizations from participating countries.
ARISS offers an opportunity for students to experience the excitement
of Amateur Radio
by talking directly with crewmembers on-board the International Space
Station.

Teachers, parents and communities see, first hand, how Amateur Radio
and crewmembers on
ISS can energize youngsters' interest in science, technology, and
learning.

Further information on the ARISS programme is available on the website

http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of
Canada). Information
about the next
scheduled ARISS contact can be found at
http://www.rac.ca/ariss/upcoming.htm#NextContact.

868. Rigging ? The Barker & Williamson "BWD-90" T2FD Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-10-05 07:21:16 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1128496876.081240.250490@f14g2000cwb.googlegroups.com>
Source record: 43079

David,

Barker & Williamson "BWD-90" T2FD Antenna provides full coverage
of the Shortwave Bands from 1.8 MHz to 30 MHz and is 90 Feet long.
http://www.bwantennas.com/ama/fdipole.ama.htm
http://www.universal-radio.com/catalog/hamwire/0872.html

Idealy at 90 Feet long this "BWD-90" T2FD Antenna would
require a 64 Feet elevation difference between the Tip-Ends
of the Antenna.

Practically speaking the BWD-90 T2FD Antenna at 90 Feet long
would only need a 45 Feet elevation difference between the
Tip-Ends of the Antenna. This would require a High Mounting
Rigging Point of 60 Feet and a Low Mounting Rigging Point of
15 Feet.

iane ~ RHF

Hello, SR!
Check out this from the IMDB.com database on the film:

The U.S. Air Force would not allow Kubrik or his designers to see the interior of a B-52 for security reasons. So, they were forced to look at a photograph of a plane and extrapolate its interior based on that. Their surmises were so accurate that after the film's release, the Air Force was certain that they'd stolen classified information.

With best regards, Dave Stewart. E-mail: david_a_stewart@ntlworld.com

Depending on where you live. In some cases, consent of both
parties is required. In most cases, if you try to get permission to
record from your end, you'll get an answer like, "I'm not authorized
to allow that." Since you need to talk to them, they just refuse
permission and will hang up if you persist.

Hi,
I'm just cleaning up an old lady, a Rx YAESU FR 101. I it found last month on eBay.de. Realy a bargain ! Works marvellous ! It's worth spending some time to make it younger.
The S meter is not illuminated . Before opening it in order to change the lamp, I'm wondering if there is any l inside.
Is it a simple trick to calibrate the 100 kHz window ? The drum inside is a bit off-frequency, the system is like a clock-work (splendid !) and it MUST be something anywhere to calibrate it !
Can anybody give me the infos ?
Thanks in advance

There's nothing "elitist" about is.

It's a fact of common sociology.

> > It always baffles me that free people buy into the notion of "democratic

Spelling's better, but your grammatical structure still needs
work.

> freedom and equality are not in consistant

Sure they are.

There are hundreds of millions of people all over the world who
share the same basic "freedom" that I do, but are NOT my "equal" on
many, many levels.

You're proof of that, Mark.

> > If you want to explore the results of real human equality, read Kurt Vonnegut's

> why since the line of "Reasoning" is GIGO

You're kinda stuck on that "GIGO" acronym, aren't you, Mark?

It's no longer generally applicable for many reasons. On more
than one example I can put "garbage in" and get something useful out on
the other side.

Well, you are right. Logging a "few" trees won't damage the forest.
However, what logging company is going to set up an operation for only a
"few" trees? Let's try and be a little more realistic here...

A hundred years ago, before your "eco-nazi" laws, they would clear cut
(can you say "decimate"? Sure you can!) entire forests without batting
an eye.

Ok, I didn't make myself very clear there. In my area, the radio stations have agreements to share their towers, and to carry multiple transmitters. After a lightning strike, one local station lost everything, but 6 hours later, they were back on the air from a neighbours tower. Not very handy if you happen to be DF'ing the wrong location! NOTAMS are not required for Commercial Broadcasters, so it could be a disaster for the uninformed.

Brad.

Godwin's Law was made up by someone that didn't want to discuss anything
being akin to Hitler or Nazism.

For example, it would not and could not be applied to any discussion about
the Holocaust, skinheads, WWII, etc.. and should not be applied to any other
discussion because the easiest way for something like the Holocaust to
happen again would be to ignore similarities.

Hey Dan: Well thats a good question. I am trying to figure out what kind of map I should get. I like DXing, I subscribe to MT magazine. I hate it after I pick up say an far away broadcast, get all excited because of the distants, then to learn that it came through a near by relay.

If thats the case then at lease I would like to know more or less where these relay are located as part of the hobby.

Dxing is a hobby to me. By having a hard copy map, I feel more compleat. My radios & PC are in a small room here at home. And I have two walls where I could place two maps.

My question is what are the the different kinds of maps I should have.

I know there are world maps with time zone, but what other information should I look for in a map. World map that is!

Also, shouldn't I look for a map with latitudes? Please tell me which maps I should get.

As for software, I do not care too much for it mainly because I would have to keep my PC on most of my Dxing sessions. In fact I still use a boatanchors, although I have an Icom R75.

I sort of have an old fashion approch to radio listening.

73, SR!

Whatever it is, I had one in the early 1990s, connected to an NRD 525
receiver. Excellent reception at just about any frequency.

It's built like a tank; heavy wire; well put together; should stay up
in rugged climates.

It is sorta "visible" tho' with all the coils and things. Not a
stealth antenna.

Wildfires are quite a bit less common in areas where relative humidity is fairly high, like in Mississippi. New England also has very few. Here in the arid west, grassfires and forest fires seem to almost pop up spontaneously (they don't of course, but a single spark here can ignite a conflagration that will be very hard to quell. The air is too dry.).

There are also ads carried along on a simulcast transmission of a regular broadcast. For example, CFRX broadcasts CFRB's ads intended for the Toronto area.

>
> How can people know the number of listeners they have on shortwave?

For the stations, I suppose it's mostly guesswork based on QSL requests/letters and surveys.

Easy one.. good old analog FM Stereo. Used on the 38KHz stereo subcarrier to convey the L-R information, which is then beat against a doubled 19KHz pilot carrier and summed with the L+R main audio to get L and R channels.

See what I mean about this 'twit' called "an old friend" ?

He interjects into any and all topics. Then gets it all turned way off the original topic, and brings the discussion to 'him', his 'views', his 'rights', his 'wants', his 'needs'.....Then acts insulted when someone has the audacity to actually challenge him.

A world class moron in my book.

> simple Bullshit Hans equality in rights does not mean
> one gives up the right to the be different

You have that part right --- equality in rights is a fine thing, and we all agree with it.

But I wasn't talking about "rights". I was talking about the flawed notion that "all men are CREATED equal". We all have different physical attributes, different levels of intelligence, different native skills and abilities, etc., etc., etc. Clearly we are NOT created equal. As an example, you may have a great sense of pitch and rythm along with a good voice, so might become a famous singer. I on the other hand, can't carry a tune in a tow sack. Clear to all but deaf observers, we are NOT equal. The same analogy can be applied to any human attribute you wish to examine, yet politicians (even though they don't practice it themselves) still feed the masses this "created equal" myth, and the masses still buy into it.

Forests, left to their own devices, end up with trees far too close
together for good root growth and effective nutrient absorption. Lots
die. The dead ones end up fueling forest fires that take all the trees.
Most logging companies today would take trees in such a way as to let
the remaining trees have room to grow, so they can come back in a dozen
years and harvest again.

Yes. Unlike you, they think a few years ahead and realize that planting
trees now makes trees to harvest years from now.

>Sometimes we say a station is at 9680 kiloHertz (kHz)
Another time we say this station is on 31 meters.
What gives? <

Boy, you got a lot questions!

9,680 kHz, or 9,680,000 Hz, is the frequency of the radio signal, equal to the number of radio waves that pass a point, or enter one's antenna/radio system, in one second.

31m is the approximate wavelength of that radio wave at that frequency, and can be used to refer to all frequencies in the 9.5 to 9.9 MHz band (nowadays extended as far as 9.2 and 10 MHz at the ends). In days gone by, many old radios (and old timers) identified their location on the "dial" by wavelength; some stations still use both frequency and wavelength in their station IDs. The use of digital readout has almost obviated this nomenclature, except for those who use boatanchors or other cool old-time equipment.

As it turns out, a wave at frequency 9,680 kHz is almost exactly 31m long, and almost the precise "center" of the band.

My question is - do you really want to know, or is this a test?

Or, are you just trying to say something on-topic (I admit, a significant feat for anyone who is a part of this bunch...)

Most people, anyway. Recall that it wasn't until many years after the
USA was founded that it became illegal for some people to own other
people as property, and even more years until both genders had the
right to vote.
>
> But I wasn't talking about "rights". I was talking about the flawed notion
> that "all men are CREATED equal".

And there's the problem.

The phrase "all men are created equal" is too often taken as a
stand-alone, without the context of the rest of the document and the
times when it was written. The equality that was meant in the original
document was equality of rights - and rights only! It was meant to
dispel once and for all any claim to inherited privilege, nobility,
title, or monarchy. No more and no less. This was a truly radical
concept at the time, when almost all of western civilization had
"nobles" and monarchs, and the average person had few if any rights
that were guaranteed simply by being a human. The "endowed by their
Creator" part is meant as a direct contradiction to the idea that some
monarchs were given their authority by one divinity or another.

(for a truly brilliant deconstruction of the concept of monarchy, see
"Monty Python and the Holy Grail", and the scene where Arthur
encounters Dennis.)

> We all have different physical attributes,
> different levels of intelligence, different native skills and abilities, etc.,
> etc., etc. Clearly we are NOT created equal.

Not that way, anyhow. And even if we *were*, we all don't develop the
same way. The differences observable in identical twins are proof of
that.

> As an example, you may have a
> great sense of pitch and rythm along with a good voice, so might become a famous

What they do is to substitute equality of *outcome* for equality of
rights.

Or to put it another way, what was meant by "created equal" was that
there should be equality of *opportunity*, but not necessarily equality
of *results*.

> >> If you want to explore the results of real human equality,
> >> read Kurt Vonnegut's short story "Harrison Bergeron"
> >> at http://instruct.westvalley.edu/lafave/hb.html

It's a great story, showing the enforcement of mandatory equality of
results.

There are many road races where anyone who can pay the fee and who will
sign the waiver can enter, start at the same starting line and starting
signal, and run/walk/jog the course.

That's equality of opportunity.

What Harrison Bergeron describes so well is a society where everyone
has to *finish* together, regardless of their actual ability.

>That's the craziest thing I've read in a long time. <

Uninformed too, but the question is Why?

The North American continent did not become heavily forested since the last Ice Age because timber companies came in and were able to manage them effectively by clearcuttiing or heavy selective cutting. Old growth forests with healthy diversity and heavy plant cover were the rule prior to that. The combination of climate, diverse soils, relatively natural processes and yes, fire, created the extensive patchwork of diverse forests that the early settlers met in North America. Yes, there are some trees dead or dying in any forest - but these trees, burned or unburned, make nutrients for the next generation - and come on, show me any natural system where the dead don't naturally follow the living and recycle themselves back into nutrients for the new growth!

It is true that, if we look at it purely from a human use perspective, a heavily managed forest is, at least over the mid-term, going to yield more usable timber.

But, people aren't the only living things that depend on the forest for their lives and livelihoods.

I strongly suggest to anyone who thinks that an undisturbed old growth forest cannot be healthy, should come west (or even east) and look at the incredible forests where people have chosen to preserve them. Except for the cultivated timber tree species and obvious beneficiaries of managed forests (like deer), the trees are bigger, the soil is richer, the plants and animal species and numbers more numerous than anywhere that forests have been disturbed and managed. Compare the undisturbed Olympic rainforests, the redwood groves, the undisturbed Sierra forests, the burned and remarkably rejuvenating forests of the Yellowstone, the Alaskan Tongass, and especially the amazingly diverse Appalachian forests in the Smokies, with any managed forest anywhere on the continent. The differences are enormous and occasionally alarming.

If you want diversity and scores of animals and plants and magnificent trees, old-growth is the way to go. These qualities are valuable and

cannot be maintained by more than inconsequential harvest programs. If you want monocultures of neat tidy rows of trees ready to be sacrificed every 40 years for maximum profit, then a managed fire-suppressed plantation is the way to go. This is valuable too, but in a very different way.

Don't see many clearcuts anymore now do you. You'll never get America back
to where it was 100 years ago, no matter how much forest you designate as
wilderness. Logging Co's setup all the time for select cutting.

>To quote you:
"That's the craziest thing I've read in a long time" <

CA Central Valley has a remarkable variety of pollution sources, from dust to ag burning to cows to cars. Each produces a different mixture of emissions - some more particulates, some more ozone precursors. The Central Valley has such bad air quality in summer (due to emissions and climatological factors) that *any* reduction in *any* pollutant is desirable.

No clearcutting? Install Google Earth and take a look areound Mt. St.
Helens in Washington State.

Clearcutting is easy to see.

It makes it easy to put up an antenna, if you can find a tree still
standing.

>Why is it termed "SHORT" WAVE ?<

Because it is shorter than medium wave, which in turn is shorter than long wave - back when these types of radio signals were the commonly used wavelengths.

Of course, now with microwaves and picowaves, the name becomes much less meaningful. In fact, the term H(igh) F(frequency), which seems to have replaced SW for many purposes, is not really accurate either.

Very good Bruce -- indeed it is an ancient term carried over to this very
day

From Wikipedia or google

Shortwave radio operates between the frequencies of 3,000 kHz and 30 MHz
(30,000 kHz) and came to be referred to as such in the early days of radio
because the wavelengths associated with this frequency range were shorter
than those commonly in use at that time. An alternate name is HF, or high
frequency.

IRC (Internet Relay Chat) may be a better venue. There were some
threads on that here, several months back, with the server domain name
and channel name for some of the existing ones (#monitoring, I think).

Or find a single site (web based) forum with no posting delay.

(I've got to turn my computer off if I really want to dig out the
DX, so I guess I've got a problem...)

Clearcutting is easy to see. <

Don't need a satellite picture it is quite visible from the ground :-(We took a trip to Washington past June and July, and saw a massive amount of the most gruesome logging practices imaginable. Total destruction. Mt. St. Helens, Olympic area, near Rainier - lots of it.

Washington calls itself the Evergreen State. Ironic.

Some sources disagree on where shortwave begins. And, NASWA considers shortwave
to begin at 2000 kHz.

>first letter of the callsign ??

There's a list, set up by the ITU for the call signs. It's usually in the Radio Amateurs Handbook (ARRL Handbook for Radio Amateurs). For US civilian stations, the format of the call signs for various classes of station is in the FCC regulations. Part 2, Subpart D, of Title 47 Code of Federal Regulations.

UALLBew:

- well, if you say " Theres a great signal in the 31 meter band"
it's kind of like saying

" Theres this great restaurant in Downtown Cleveland"

However, if you say

" Found a great signal playing Arabian Square Dance Music on 9860"
- someone wil have a clue as to what yer talking about and be able to
locate said signal..

Suppose Referring to meter bands is OK if your referring to general
reception conditins in your local..

Didn't say "31Meter band"

But wavelength = 300 / frequency in MHz

So 300 divided by 9.680 MHz = 30.99 Meters

Close Enough ?

BTW There are NO great restaurants in Downtown Cleveland
Lived there but things may have changed (;-)

It's interesting that the same signal can be regarded as (a bandwidth
limited) Pulse Amplitude Modulation where the Left and Right Channel
are sent as alternate samples at 38 kHz. (Along with the 19 kHz pilot
tone).

994. Sony ICF M-350S Help

Newsgroup: rec.radio.shortwave
Date: 2005-10-05 19:30:04 UTC
From: cmwpdx@hotmail.com
Message-ID: <1128540603.981480.251240@z14g2000cwz.googlegroups.com>
Source record: 43250

I have come into possession of a very nice Sony radio with SW, an ICF M-350S. I think it was only marketed in Asia, since the North American version substitutes TV for SW (ICF-350V). However, the SW meter band is only 5800-6200 on the tuner, and I can't for the life of me figure out how to switch to other meter bands, assuming it has them. It picks up on the 5800 band about as well as my Tecsun, and gets really good MW reception too. I have found the manual online for the 410S, its successor, but that switching method for meter bands doesn't work. Can anyone with this radio help me? Thanks

>I believe when Mt St. Helens erupted is caused a much worse clearcut<

For a single event, yes.

But the collective human effect has been greater.

Both of these are fairly small conmpared to what will happen when the
Yellowstone Caldera or Owens Valley Caldera get mad again.

I only see it listed as a three band radio so that's probably all you get.
(assuming that FM is the other band).

No, the burden of proof is on you to demonstrate
that it's correct. You make the statement, you
back it up with valid proofs, not opinion pieces.
If I make a statement, it's on me to back it up. Likewise,
the same is on you.

I was coming back home from the Goodwill store about three hours ago on that little piece of Jackson Highway.My 1986 Ford car got a blowout on the left rear wheel.I was trying to steer my car and somehow it found itself in the back yard of somebodys house over there aybout a quarter mile from my house and now my car won't go in reverse gear.A neighbor guy over there said nobody stays in that house,that woman in that brown house over there owns that house.I just now walked back home,, soon as one of them girls gets off work and home to that house next door to me,, we are going over there in my old 1978 Dodge van with my tow line and snag my car out of that back yard over there.

"denying" "named"

No...

Most of us said you're NOT our EQUAL.

There's a difference.

There's only one thing I KNOW you do better than me, and a second
I am willing to give you the benefit of the doubt on...

The first is lying.

The second one is physically gratifying the male of the species...

> > But I wasn't talking about "rights". I was talking about the flawed notion

The "CRM-114 Discriminator" was a key component to the plot of the movie.
It was totally fictional.

Emergency Action Messages & Force Direction Messages in that era would
have been sent out over HF/SSB radio over several channels & from several
high-power radio stations located around the world, and the coded messages
would have been authenticated using a part of the message & data contained
aboard the B-52.

The radio device is accurate... it was a CRM-114 discriminator....
the code was OPE - 491....

this device will not let ANY message or anything else thru to the
pilot unless it is preceded by the correct code sequence...

in this movie the President did not try to recall the plane... That
was a great flick called Fail-Safe with Henry Fonda as the Pres....
They got the russians to stop jamming so they could talk to the plane,
but they were beyond the point to accept verbal commands...

in Dr. Strangelove the radios were damaged from flak and they never
did get the correct recall code.

Great movie.... GREAT movie!

I agree dxatlas is one of the best and well worth it

but I don't think you can view it on-line as the original poster requested

In fact I believe it is a pay program -- maybe a free trial -- click on
REGISTER

Still lots of freebees out there viewable on-line
For example URL:
http://www.lib.utexas.edu/maps/

If you need prefixes to go with the maps -- lots available on the web
And they are alphabetical/numerical

That depends on the station. Included in the subcarrier set can be such
things as digital or analog SCA (Subsidiary Communications Authorizations)
or RDS signals. IIRC, these are carried in most cases on 76 and 92 KHz
subcarriers, although there is no steadfast rule for use of subcarrier
frequencies, only convention.

It could be posed that anything (such as a cow) that is a natural part of
the ecosystem cannot part of a pollution problem. Man himself cannot be a
direct part, either, though his machines certainly can as they are not a
natural part of the ecosystem.

Very Good Brenda Ann-- five stars

Yep my wife is in awe of her new car with a Bose system. (She drove the last
car for 17 years & 260,000 Miles)
For some FM stations, the radio panel gives the station call letters and
name (Smooth Jazz), name of the song and artist !!
She exclaimed -- Howd they do that (:-)

She also giggles everytime she uses the buttons on the rear view mirror to
open up the community gates and our garage door. Ah technology

For SCA details - see URL:
http://www.blackcatsystems.com/radio/sca.html

maybe we motorists should take a look at fully electric type cars, and
not be hostage to the world greedy petrol companies.
The solution to rising petrol prices is - DON'T USE IT !!
by Tom Slick
dontcrush@netscape.com

The solution to sky rocketing petrol prices is not to use petrol
powered vehicles. However tax addicted governments may not like it and
the oil suppliers will certainly not like it if we'd all stop running
to the bowsers to fill up and get ripped off!!. Well tough luck, people
are sick and tired of the BS fed to them by Governments and the OIL
industries.... Even the commercial media are loath to talk about
alternate vehicle technologies that have been available for ages but
suppressed by the powers to be. Things are about to change though as
the following article explains....

http://www.pluginamerica.com/

DontCrush.com Announces Toyota Victory, Launches Plug In Americaâ?¢
Former CIA Director joins auto engineers and advocates to encourage
automakers to produce petroleum-free, pollution-free cars

Los Angeles â?? In an international telephone press conference today
DontCrush.com, lauded Toyotaâ??s recent decision to keep its
zero-emission, battery-electric RAV 4 SUVs on the road. Joined by a
former CIA-director, an ex-GM employee, an EV engineer, and the
Southern California Edison Electric Transportation director,
DontCrush.com is declaring a victory in its efforts to save
Americaâ??s last remaining petroleum-free, pollution-free vehicles.

DontCrush.comâ??s success in saving Toyotaâ??s RAV4 EV, the Ford
Th!nk City EV and Ford Ranger EV from the crusher while bringing
national attention to
General Motorsâ?? decision to destroy its popular EV1s, have inspired
the group to help America move towards an oil-independent future with
Plug In Americaâ?¢, a new advocacy organization launched today. The
organization will work with industry, environmental and national
security organizations, and concerned citizens to revive plug-in auto
production and give Americans the freedom to choose cars, trucks, and
SUVs that are powered by cleaner, cheaper, domestic sources of energy.

Following a three-month campaign, Toyota agreed to stop crushing its
RAV4 EV, and allow satisfied customers to lease or buy their
zero-emission SUVs. Electric vehicle advocates, long dismissed as
â??fanaticsâ?? or â??hobbyistsâ?? by automakers, are in fact
speaking for the majority of Americans concerned about national

security, public health, rising gas prices, and global warming. A recent Reuters survey found that most Americans believe it is patriotic to buy a fuel-efficient vehicle to help reduce American dependency on foreign oil. Nearly no oil is used for making electricity in the U.S; over 70% of our oil is consumed for transportation. Plug in America wants the government and automakers to prioritize building and marketing plug-in vehicles now.

Plug In America
Pulling away from the pump and plugging into our nationâ??s extensive electric infrastructure would mean that Americans could immediately make the switch to cheaper, cleaner, domestic energy sources to power cars, trucks and SUVs. The cost of plugging in to the grid and charging up at home is the equivalent of pennies per gallon on the average electric bill as compared to $3.00-plus a gallon at the pump today. The widespread use of renewable energy like solar and wind power is on the rise across America and offers drivers the opportunity to plug-in to fossil-fuel free energy. With a plug-in hybrid, which uses a battery-powered electric motor for the first 30 to 50 miles, most American commuters would rarely if ever need to fill up or even top off with gasoline unless making a long trip. Since 50 percent of Americans do not drive more than 20 miles per day, the electric range of a plug-in hybrid would power nearly all of our daily driving.

A Brief History of EVs and The People Who Tried to Destroy Them
DontCrush.com started in 2004 in response to auto companiesâ?? ongoing destruction of their electric cars after successfully eviscerating Californiaâ??s Zero Emission Vehicle Mandate. Despite enormous popularity including waiting lists to lease the all-electric, zero-emission vehicles, the auto industry spent millions lobbying Sacramento and suing in federal court to take the cars off the road and replace them with gasoline cars as the only readily available option. Successful grassroots interventions including demonstrations at dealerships, car-sit vigils, and public education rallies helped save from the crusher hundreds of Ford and Toyota electric cars.

DontCrush.comâ??s efforts have received public support from the American Lung Association, CalCars.org, California Assembly Member Fran Pavley, California Assembly Member Mark Leno, California Environmental Protection Agency Secretary Alan Lloyd, California State Senator Sheila Kuehl, Electric Auto Association, Environment Now, Global Exchange, Greenpeace, Jumpstart Ford Coalition, Natural Resources Defense Council, Orange County Interfaith Coalition for the Environment, Rainforest Action Network, Set America Free, Sierra Club, City of Santa Monica, South Coast Air Quality Management District and the Union of Concerned Scientists.

Supporting Statements
James Woolsey, former Director of the Central Intelligence Agency and member of Plug In America coalition and Set America Free, is a well-known advocate of plug-in hybrid technology. â??We must encourage

the commercialization of technologies that are compatible with existing infrastructure. What makes plug-in hybrids promising is that they are; we donâ??t need a Manhattan Project to make this happen.â??

"Southern California Edison is proud to operate one of the nation's largest and most successful EV fleets, â??says Ed Kjaer, Director of Electric Transportation Department of Southern California Edison. â??Since its inception, SCE's EV fleet has traveled almost 12 million trouble-free miles delivering significant petroleum, emissions and green house gas reductions as well as lower maintenance and operating costs. Thanks to the continuing support of Toyota and as a testament to the quality, durability and reliability of their world class EV, SCE is committed to maintaining its almost 180 Toyota RAV4 EVs indefinitely."

â??The waiting lists and public campaigns for plug-in vehicles only proves that the demand for these cars has always gone unfulfilled by the automakers,â?? says Chelsea Sexton, Plug In America organizer and former GM EV1 specialist. â??There was compelling demand a decade ago when large EV programs started and were killed. That demand has only increased exponentially as the nation has come to realize the devastating consequences of depending on foreign oil.â??

â??Four years and over 30,000 miles driving electric cars has proven to me that the best way for us individually and as a nation to use less oil is to have the choice to use none,â?? says Marc Geller, Plug In America organizer. â??Automakers need to offer plug- in electric alternatives, because electricity from the American grid, or in my case my solar PV panels, is cleaner, cheaper and domestic. We shouldn't have to pay off oil companies or undemocratic regimes just to get to work. Disruptions in oil supply â?? in Iraq, in Louisiana - compel us to move quickly. We need choices. Now. Unlike the ever-more distant panacea of hydrogen fuel cells, plug in technology works today, and the infrastructure is ubiquitous. The automakers have already proven they can make great plug in cars. I drive one past gas stations every day.â??

â??Before I leased my RAV4 EV, I never knew how much Iâ??d love it. After I had it, I had no idea how hard Iâ??d have to fight to keep it,â?? explains Linda Nichols, Toyota RAV4 EV owner. â??Toyotaâ??s turnaround is a courageous decision to respond to consumer demand and revise a policy created years ago for the benefit of their customers as well as the environment.â??

OHHH good question

I suspect its because of the formula
wavelength = 300 / frequency in MHz

So when you divide out the 300/freq

It comes out in even metric units

e.g., ELF Extremely Low Frequency 3 - 30 Hz 100,000 - 10,000 km
SLF Super Low Frequency 30 - 300 Hz 10,000 - 1,000 km
ULF Ultra Low Frequency 300 - 3000 Hz 1,000 - 100 km
VLF Very Low Frequency 3 - 30 kHz 100 - 10 km
LF Low Frequency 30 - 300 kHz 10 - 1 km
MF Medium Frequency 300 - 3000 kHz 1 km - 100 m
HF High Frequency 3 - 30 MHz 100 - 10 m
VHF Very High Frequency 30 - 300 MHz 10 - 1 m
UHF Ultra High Frequency 300 - 3000 MHz 1 m - 10 cm
SHF Super High Frequency 3 - 30 GHz 10 - 1 cm
EHF Extremely High Frequency 30 - 300 GHz 1 cm - 1 mm

I guess, therefore I am

Hello, I am looking to buy a decent used shortwave receiver.
An older tube modle or newer/used radio is fine.
Please send contact information and desired price to discuss terms.
Hammarlund HQ-145 and HQ-180
Drake R-7 or R-8
JRC NRD-525 or 535
ICOM R-71
or similar quality older receiver.
Thanks
Steve

Source record: 43457

Susan Chira, the Times' foreign editor, said the newspaper did not give the Communist government a copy of the memo, which was stored in a file cabinet in the Times Beijing bureau. Asked to comment on the possibility that state security agents searched the office and photocopied it, she replied: "If that were true, we'd be upset. . . . We really don't know what happened. Obviously, they got hold of it."
...
The Chinese National Administration for the Protection of State Secrets, the agency responsible for classifying information in China, has already certified the memo as "top secret".
...
People familiar with the probe said state security agents obtained a copy of Zhao's memo in the nine days after the publication of the Times report...
Joseph Kahn, the Beijing bureau chief of the Times, said he had no reason to believe any Times employees helped the agents, noting that he and Zhao were the only people in the office who knew the memo existed.
...
A Communist party official who spoke on condition of anonymity said state security agents were under pressure to identify the source of the Times report...

And the 300 in the formula has to do with the speed of light (radio Waves)
299,792,458 metres per second -- for practical purposes
300,000,000 meters per second

CL Guessing twice , confirms I am

"Short" is relative. The "wave length" is the peak to peak (or trough to trough) distance between the waveforms as they'd be seen on an ocilliscope. "Shortwaves" are shorter waves than medium waves, which are shorter waves than Longwaves. At the inception of the science, "short" waves were the shortest type used (commonly) at that time. Today, with cellphones and things using wavelengths that go with gigahertz frequencies, "short" waves begin to look really long by comparison.

Tony

Very good Tony
Wikipedia sez

"Shortwave radio operates between the frequencies of 3,000 kHz and 30 MHz (30,000 kHz) and came to be referred to as such in the early days of radio because the wavelengths associated with this frequency range were shorter than those commonly in use at that time. An alternate name is HF, or high frequency.
en.wikipedia.org/wiki/Short_wave

As I recall the story At one time the bands below 200 meters were considered worthless, so they gave the whole range to tha Amateurs
Soon they were sending signals across the atlantic

See 200 Meters and Down By Clinton B. DeSoto.

You ahve stated that I don't have to right to post peacefully without
explaining myself to you

you have also claimed I and the rest of the techs don't have the
priviledge to decide for yourself how to operate (within) the rules
without agreeing to acccept the hectoring of personas like yourself

Indeed you have calimed I am under some obligation to give Bill Gates
even more of Money than everyone else

BTW gues you were not being truthfull when you claimed you did not read
my posts or that you could not read em

Actually this radio was overhauled by Rick Mish. I donated it to the USS Missouri as the radio room looked positively gutted by the navy. I donated several other radios of different times historically to try to help out a very good cause. I have not had the chance to get to Honolulu and see the final result but would be interested in stories from visitors

> being.

>Quote
You ahve stated that I don't have to right to post peacefully without
explaining myself to you
>Unquote

This is incorrect. I have never said any such thing. I have said that if
people can't understand you, why do you bother to post and why should we
bother to read them. You have the right to post and we have the right not
to pay any attention.

>Quote
you have also claimed I and the rest of the techs don't have the
priviledge to decide for yourself how to operate (within) the rules
without agreeing to acccept the hectoring of personas like yourself
>Unquote

I have not hectored you nor do I approve of anyone hectoring people. If you have misconstrued my statements, that's your problem not mine.

>Quote
Indeed you have calimed I am under some obligation to give Bill Gates
even more of Money than everyone else
>Unquote

Never said any such thing. I have stated that there are means for people with difficulties to compensate for those difficulties. If they choose not to take advantage of such tools, don't blame others for their opinions of your work. That you do not want to invest in appropriate tools is again your problem not mine. It's like anything else in life. I'm too short to reach the top of the cupboards so I purchased a step stool. It would be foolish to complain that the top shelf is too high.

>Quote
BTW gues you were not being truthfull when you claimed you did not read
my posts or that you could not read em
>Unquote

Incorrect. I stated that I could not read SOME of your posts. If a post is not clear, I don't finish reading it and I don't respond to it. That is my right. Others are quite legible. If I find them interesting, I respond. That is also my right.

I also stated that I would not bother with your posts until you had regained some of your equilibrium. Sufficient time has passed that it has been worth checking. I also do a search so as to be able to choose whether I want to respond if someone should post false statements about me as you have done in this and the preceding posts.

Actually they scream rape when told to do that -- they'd rther
clearcut, re-seed and move on. They constantly bitch about the cost of
low-impact logging like removal by helicopter. All they want is huge
gravel roads fed from the side by skid roads.

Carter - 'decimate' means 1 in 10 [.]
.
About Clear Cutting - That Was Then - This Is Now !
The Senator Feinstein has a Forest Management Bill
that Protects the Trees and Manages the Forest as a
National Resource. When man steps in and protects
the Forest from Fires. Man simply sets-up the Forest
for Mega-Fires and the Total Destruction of the Forest.
.
Forests - Manage Them -or- Let Them Burn Naturally.
.
yes it is as simple as that ~ RHF
.
.
. .

Farmers don't move on. The lumber companies do. They'd not
replant if they could get away wih it. What they do replant is only
what they can come back to take again.

CLIFTO,
.
Not on the Yearly Time Scale of Man,
But on the 50, 100, 250 and 1000 Year
Time Scale of a Forest. The Forest Fire
over Decades and Centuries of Time
'adjusts' the Forest to it's Eco-System.
.
If Forests are allowed to Burn Natually
they do a reasonably good job of being
a part of the greater eco-system within
their area and region over the long term.
.
Proper Management of the Forest should
attempt to do what the Forest Fire does
and provide benefits to mankind.
.
yes it is as simle as that ~ RHF
.

no false statement you seek to deny the rights of others

simple fact

ypou claim you have rights that you deny to others like msyelf
>
> Dee D. Flint, N8UZE

For someone who is so concerned about Baxter's good name and potential slander thereof, you seem totally unconcerned about applying your own double standard and slandering anyone who does not bow down to your mistaken interpretations of other's posts.

However, you seem to have gone off the deep end again so I see no point in conversing with you at this time.

Dee D. Flint, N8UZE

>currently, knowingly & willingly defends and protects a group of child
>molesters?"

As long as the SC has agreed that the defenses proffered have
merit. The issues had to do with the right of people to assemble on
public property for meetings under the protection of the first
amendment. Acting upon the presumed topic of discussion of the

meetings (pedophilia) was never defended by the ACL. Likewise he defnse of the Nazis' right to march, with no concomitant defense of linching blacks.

But, since such dilegal and philosophical distinctions are clearly beyond the intellectual capacity of an imbecile like yourself, I guess I've just wasted your time in explaining.

> Is it possible you are also a child molester and that is why
>you feel such a close kinship with them

Fuck you, vicious bastard. You can't even argue without extreme, baseless ad hominem. How about if I speculate that you might be the spawn of a syphilitic whore, based on your lack of intellectual capacity?

> Also, you failed to specify where,
>in the constitution, does it provide for the right to sexually abuse
>children

Lame ass strawman. Many constitutional rights are derived, not explicit. One of the founders was strongly against adding the bill of rights because, as he said, "In two hudred years, some fool will come along and deny that a right exists because it was not enumerated in this list." So you're the fool to fulfill his prophecy.

> and/or how you would otherwise justify your support for the ACLU's
>efforts on behalf of a group that molests children. I say you *can't*
>justify it...

The same way I can justify support for a government that gets the people of the US into a needless war -- you look at the totality of what it does, not just a carefully slected piece that you don't agree with.

The fact that the SC has backed up the ACLU in many defenses of unpopular cases demonstrates cearly that the ACLU's arguments have merit, despite your incapacity to understand.

Why don't you wipe your ass with the unused side of the Constitution as well as the first side which you've already used.

The distinction I made above is clearly too deep for you to
understand. You'd prefer to just stand on your silly little pedestal
like a mindless demagogue, shrieking vainly for everyone to cheer for
your distorted views.

You're as bad as the duplicitous Hoover shrieking about
getting deviates out of government, then going home to his own little
lipstick-and-pumps show in front of the mirror.

I would try the "old" novice bands on 40 meters, 7100-7150 KHz. There's a
lot of slow speed CW there.

FM stereo transmits the L-R signal at 38Khz with DSB-SC (DSB without
supressed carrier is simply AM).
The signal is recovered by using the 19Khz Pilot carrier on the main
FM transmission to phase lock the 38Khz oscillator for synchronous
detection (If you cannot phase lock the injected carrier, you WILL get
phase distortion, and the stereo signal will sound like cr*p).

That is also why most FM receivers have a deep notch in the audio
section at 19Khz...

Some forms of AM stereo used ISB. L+R on one sideband, L-R on the
other, with sychronous detection with carrier phase locked to the over
air carrier.. The Sync detection that made the Sony ICF2010 so famous
is in fact an AM stereo decoder chip!

Yup, technically you are right, but yours is the third definition of three listed in the Yahoo dictionary. The first two were what I had in mind...[emphasis added]:

1. To destroy or kill a *large part of* (a group).

2. Usage Problem
1. To inflict *great* destruction or damage on
2. To *reduce markedly* in amount

3. To select by lot and kill one in every ten of.

Yes, but you miss the point. Do they "think a few years ahead" because they *want* to or because the laws say they *have? to? I contend the latter, because before the laws were in place, they would clearcut and then just walk away...

Huh???

How did we get talking about farmers, with their relatively small
(compared to forests) private plots of land?

But to address your question "What happens to a farmer is he dosent
replant?", the answer is: the gummint pays him to *not* plant. (I'm sure
you have heard of the subsidy program)... :-)

Don't bother. Everyone who has ever disagreed with him or pointed out his errors or used normal English words such as "class" in exactly the same manner as the FCC uses it is automatically denying him his rights and/or denigrating him. Only his definitions can be considered correct or he is being denied his rights.

Perfectly true, but few, if any, FM receivers can receive above 15kz
and few FM broadcasts ever exceed 15kz, so the notch at 19kz is somewhat
moot.

Tony

Mike:
I was there in September. The 'radio room' is in what the tour guide referred to as the 'command and communications center' or something like that. I have sevral pics of that room if you're interested. The entire setup looked pretty nice with lots of electronics and navigation gear. As an SWLer, the R-390A caught my eye immediately.

It was interesting, sure. Certainly from an historical perspective, it's interesting to see how the nation lampooned the Cold War and prevailing security dilemmas of the day. But all too often humor doesn't tend to age so well. And a lot of the humor in that movie..humor which may have been considered hilarious in that day and age...is downright lame. Gen. Ripper's lines on "precious bodily fluids" are particularly unfunny. I can't say that I thought too much of Peter Sellers, either, for that matter. Of course, I'm not saying that Peter Sellers was bad in this flick (it was not anything akin to his downright awful performance in that horrendous abomination The Party). By and large, I don't care for Peter Sellers movies, though. Or 1960's comedy flicks in general.

I contend the former, because they will want to be in business ten years from now. Logging equipment and debarkers and kilns and other lumber-producing equipment doesn't come cheap, and they can either depreciate it over a long lifetime at low cost to the lumber consumer or try to charge a gazillion shekels per board foot to pay for it all.

Check the sites of some of the paper makers. They brag about their reforestation efforts. Even if their labors are crassly commercial, they're putting back new trees to replace the trees they take, in spades.

The Terrorist Jihad dude did try to enter the
Stadium,Norman,Oklahoma,but he was refused because he wouldn't let
anybody inspect his backpack.He appeared to have a fresh beard,which is
a symbol of Terrorist Jihad.There were about 84,000 people in that
Stadium in Norman,Oklahoma.

The gentleman has done a nice job on the site. I think I'll do some building this winter too. His workmanship is excellent and it should serve as a source of inspiration..

It's always gratifying to get good results from design and assembly techniques rather than great lumps of money.

3718<grin>

Seriously, that's in the old Novice band and slower operators still tend to congregate in that area - 3700-3750. Also 7100-7150 on 40 meters and to a lesser degree 21100-21150. (the Novice band ran to 21200 but there usually wasn't much activity above 21150)

As a VERY general rule, the further up into the band you get the slower the Morse.

Source record: 43324

David,
.
You may want to consider building a Multi-Element "FAN"
Inverted "L" Antenna using an ICE-180 Beverage Antenna
Isolation Transformer.
.
Use each of the Input Taps from the ICE 180 as separate
Inverted "L" Antenna connection. Vary the Direction and
Length of each of the individual Antennas and feed the
combined signals via one Coax Cable to your Radio/Receivers.
.
Example : Direction = Vertical Feet + Horizontal Feet
North = 10 Ft + 20 Ft
East = 15 Ft + 45 Ft
South = 30 Ft + 60 Ft
West = 20 Ft + 60 Ft
Note - Ensure that the Vertical "UP" Legs
are Spaced about One Foot (1') apart.
.
Read - Comments on the "Fan" Doty Inverted 'L' Antenna

Well, anything is possible, but really rather naive of you. Look at world travel in 1918...as poor/slow as it was, the flu managed to become a *worldwide* pandemic in fairly short order.

If the "Islam-O-Fascist" did release it in the U.S., with today's *rapid* worldwide transportation and commerce, how long do you think it would take to become *another* worldwide pandemic, including their own "Islam-O-Fascist" countries?

> .
> consider the possibilities ~ RHF
> .
> .

Quite a few years ago I was talking to a very old Gentleman in my home town. He was born in 1874 in Lee county Virginia and had moved into Kentucky as a child.

He told me about hundreds of people in one of the old time epidemics (Spanish Flu I think?) He said these infected people...absolutley burning up with fever...some had crawled and some were carried down to the local river to try to cool off and had died there at the edge. He said he remembers bodies floating downstream as plain as day.

America has forgotten what can happen in cases like this and some day they are going to get a stark reminder!

You will be happy the Military is out there trying to keep this shit from spreading!

Some people don't think it can ever happen here again but believe me if the US Government is getting ready for it....I'ts coming! Even a Cat 5 Hurricane didn't draw their attention like this stuff seems to be doing!

And no .... God aint got a damn thing to do with it!

1133. OT Electronic Mass Media Misleads Americans

Newsgroup: rec.radio.shortwave
Date: 2005-10-06 13:15:15 UTC
From: David <rickets@knac.com>
Message-ID: <3p8ak11tep3m6c9r0u42g80l9sesvs1s24@4ax.com>
Source record: 43339

''...The US Press was recently found in a comprehensive international study to be only the 27th freest press in the world. And that too seems strange to me.

Among the other factors damaging our public discourse in the media, the imposition by management of entertainment values on the journalism profession has resulted in scandals, fabricated sources, fictional events and the tabloidization of mainstream news. As recently stated by Dan Rather - who was, of course, forced out of his anchor job after angering the White House - television news has been "dumbed down and tarted up."

The coverage of political campaigns focuses on the "horse race" and little else. And the well-known axiom that guides most local television news is "if it bleeds, it leads." (To which some disheartened journalists add, "If it thinks, it stinks.")

In fact, one of the few things that Red state and Blue state America agree on is that they don't trust the news media anymore.

Clearly, the purpose of television news is no longer to inform the American people or serve the public interest. It is to "glue eyeballs to the screen" in order to build ratings and sell advertising. If you have any doubt, just look at what's on: The Robert Blake trial. The Laci Peterson tragedy. The Michael Jackson trial. The Runaway Bride. The search in Aruba. The latest twist in various celebrity couplings, and on and on and on.

And more importantly, notice what is not on: the global climate crisis, the nation's fiscal catastrophe, the hollowing out of America's industrial base, and a long list of other serious public questions that need to be addressed by the American people.''

a
natural part of the ecosystem.<

OK, but cows aren't native to the Central Valley, and other native
large herbovires that might take their place would (1) not be as
populous, and (2) are not likely to be as flatulent.

There are also too many people (don't take my word for it - come here
and see how clogged up life is - but it is probably the same in the Far
East too) - so, yes, Man himself is part of the problem.

The Furnisher inside your House is it Wood ? <

Sure - some of it. There are alternatives too, many that do not require significant use of wood.

>If Forests are allowed to Burn Naturally, they do a reasonably good job of being a part of the greater eco-system within their area and region over the long term. <

They do a smashing excellent fabulous job! They, and the forests they affect, achieve a dynamic equilibium that humans can only dream about.

>Proper Management of the Forest should attempt to do what the Forest Fire does and provide benefits to mankind.

yes it is as simple as that ~ RHF <

That's a big part of it...as long as the seething mass of humans and their activities do not push all other living things out of their homes.

> radio.

Y'know, I'd kinda suggest using Excel.

The problem I have with *every* logging program out there is that it reflects the writer's opinion of what a logging program should be. What information he thinks is important to track, how you should be able to sort that information, how you should be able to manipulate it, etc...

A couple of complaints I have about just about everything in this field:

- No custom queries. I want to know which Asian countries I've worked on 40 meters -- there's no way to ask.

- No ability to do mass changes to the database. I once made a mistake importing a contest log. Ended up with 1,000 records in my log with the time off by five hours. There was no way to say "subtract five hours from all contacts between October 1 and October 3" - I'd have to change each record manually, one at a time.

- No ability to add fields. For example, many programs don't track the other station's county. If you decide to get into county hunting... where do you put the data?

- No way to customize the field order. Say all you care about is the time, date, frequency, mode, and the other guy's callsign. In some programs, before you can get to the frequency you have to enter through fields for grid square, ITU and CQ zones, rig & weather..... A logging program should put the fields you use first in the entry order, and should allow you to change that order since your opinion of the correct order may be different from anyone else's.

- Doesn't pull down data from previous loggings. Quite a few programs require you to enter the frequency and emission mode for every logging - even though it's pretty common to sit on one frequency and log everyone who shows up. Why have to retype it every time? Even more so with the mode - most hams (and even more so SWLs) spend an entire operating session in the same mode; jumping back and forth between Morse, SSB, and teletype is pretty darned unusual.

I eventually gave up & wrote my own logger, in Perl/MySQL/Apache. Now, that's a lot of work if you aren't a programmer. (and even if you are) But a spreadsheet is something you can do without extensive programming experience; it works well & lets you build your log the way *YOU* want it.

Indeed! I guess my only concern with his site is that it recommends avoiding taps on the main antanna coil, lest "Q" be lost. Without taps, or at least a bare wire surface along which to contact, how can one adjust the coil length?

I have used a heavy insulated wire coil with taps every five turns along a 2" diameter (too small for him - he says 4) cardboard tube (another no-no - plastic or other non-wetting base is better), and so far it works pretty darned well - not sure what scrapping all of that good experience will do me. Well, never know until I try!

The section listed below is an opinion. Did anyone
think to ask Robertson?

"Behind the scenes religious conservatives were abuzz with excitement.
They believed Robertson had stepped down to allow the ascendance of
the President of the United States of America to take his rightful
place as the head of the true American Holy Christian Church.

Robertson's act was symbolic, but it carried a secret and solemn
revelation to the faithful. It was the signal that the Bush
administration was a government under God that was led by an anointed
President who would be the first regent in a dynasty of regents
awaiting the return of Jesus to earth. The President would now be the
minister through whom God would execute His will in the nation. George
W. Bush accepted his scepter and his sword with humility, grace and a
sense of exultation."

Also, I checked up Scalia's article, and the quote refers
to an interpretation of Romans 13:1-5. Scalia was making
a reference to where Paul's words reference "the consensus
of Western thought until very recent times." Scalia
himself believes that with the advent of Democracy,
the concept of capital punishment has lessened over
the course of time. Scalia's article itself is about
Capital Punishment, and his personal view that he

does not find it immoral (and he provides his own reasons for that) versus what he thinks in a judicial sense (he remains neutral on the subject, as he believes his personal viewpoint on the subject is not what he should base his opinions on). Therefore, the usage of Scalia to back up the argument is rather incorrect; it is his personal viewpoint on Capital Punishment that he is discussing (and examining the Divine Right of Kings which flows from Romans), not the viewpoint that he maintains when he sits at the Supreme Court.

Another thing; Scalia is Catholic, not the born-again type of Christianity that Robertson is part of. From personal experience (arguments between my brother and myself), the two do not see eye-to-eye on many matters.

The more I scan the article, the more I'm struck by the fact that I could have written this 15 years ago. I had an axe to grind, and if I found enough support for the straw men I was creating, I'd have written that too. The thing is, the straw man using Scalia's article to expand the death penalty to homosexuals, adulterers, etc. is easily broken by the simple fact that Scalia referenced the original institution of the death penalty to include all felonies, not just capital crimes of today. Scalia patently feels that the 8th amendment has plenty of room to allow for limitations of the death penalty, but the abolition of it should be confined to the legislative branch. Not that horse-thieves should be hanged.

I still want to see what an R80 Ucom radio looks like.I was coming back home from the Goodwill store yesterday afternoon,coming down Morson Road and take a right on that little short piece on Jackson Highway and the left rear tire on my 1986 Ford Crown Victoria LTD car blew out.I was trying to keep from going off the side of the road and somehow I wound up in the driveway of a house over there that a woman next to that house owns.My car wouldn't go in reverse gear.I walked home (it's only about four city blocks distance over there,about a quarter mile,whatever) My neighbor took me over there this morning to help me get my car pulled out and turned around.My car wasen't over there.I came back home and I called the police department.The police woman called me back about half an hour later.She S and E towing company towed my car to S and E.Now I have to wait untill my brother in law gets back to his house and I have to get my Title on my car and go down town to the Standard Life building and show someone in the Records Department (the Police Department is useing part of the Standard Life building because the old Police Department is being totally remodeled and updated) my car Title and my drivers license and get a release paper and then go to S and E towing company to get my car.The Police woman on the phone told me it will cost me $84.00 to get my car back.I hope it is only a simple gearshift linkage adjustment that is needed to get my car to shift gears properly,I will get under there and look it over.Otherwise I miight need to get my car over to the Mr.Transmission shop on Highway 80 near Ellis Ave.Life sure does get interesting sometimes.

In 1938 to 1940 channel one was 44 to 50 MHz
In 1940 to 1946 channel one was 50 to 56 MHz
But in 1946 to 1948 channel one was again 44 to 50 MHz

So there is more to the mystery

CL -- I doubt, therefore I might be !

What happened to the B battery ?

<jfeng@my-deja.com> wrote in message
news:1128611423.516320.99330@g44g2000cwa.googlegroups.com...
> Plate supply. Hence B+
>

Yep tis true
A and B "batteries" were multi-cell sources for the early battery radios - where the A battery supplied the filament; and the B battery supplied the B+ - or plate voltage. The A batteries ran anywhere from 2 to 6 volts; (5V being the most common filament voltage; you used a rheostat to adjust as the battery ran down); 67 and 90 volts were most common B batteries. These used a bunch of cells - series to stack up to the B+ voltage; the A batteries were usually series (to give enough voltage) & parallel to give enough current.

There were also C batteries - (not to be confused with C cells) - they usually supplied some bias (negative) voltage for output stages, etc. Back to the "Cells" There are - or were, A and B cells, (like AA, C & D cells today) but they aren't commonly used anymore - but they did (some do) exist.

Steven Wright the wry comedian used this in his repertoire, after the show I talked to him about the origin, he sed yep I knew that but he got flooded with letters about "What happened to the B Battery" (;-)

There are lots of industrial areas throughout the US where such an operation could be set up, and not necessarily adjacent to people's homes. There are sparsely populated areas where such a facility could be set up almost anywhere - Nevada comes to mind. Gobs of Gov't land and hardly a soul around. If along the I-80 corridor, good rail service too. They could even set up their own airport.

from http://bext.com/_CGC/1997/cgc153.htm

SIDE NOTE ON HCJB AND QUAD ANTENNAS

[The ARRL Antenna Book, 14th Edition, page 6-23, states that, "The quad antenna was originally designed by Moore, W9LZX, in the late 1940s." According to one of our readers, this is the Reverend Clarence Moore who cooked up the quad at what is now HCJB near Quito, Ecuador. -Ed.]

Stan Rohrer (W9FQN) mentions that as a child he lived about two blocks from the kid who became the Reverend Clarence Moore. Stan observes that Clarence invented the cubical quad antenna at HCJB because corona discharges from the ends of the traditional beam antennas melted the tips of the elements which had to be replaced on a regular basis.

(I thought it was because of complaints of crummy reception in Holland, Michigan.)

Nope, no beef (or chicken, fish, etc). Minimize dairy too (although I love a cheese pizza and Dreyer's chocolate ice cream).

My wife and I decided to have just one child. If everyone did this worldwide, population would decrease painlessly and substantially in just one generation. The rate of resource use, the availability and cost of resources, the pollutant emissions and discharges, the space available for people and animals to live, the cost of real estate and the speed at which disease spreads would all improve as a result.

Of course, there'd be some temporary problems of economics, and we'd have to work to overcome those - but I doubt if its anything we couldn't handle.

>This "Bird Flu" crap is getting so deep that I've got to get a higher
pair of boots. Is this a spontaneously generated media frenzy, or is
there some organization running a campaign? (Big pharma trying
to sell anti-flu drugs)? <

Mark - The scientific information I've seen so far (and I admit, it is
a bit sketchy yet) is that this new flu virus closely resembles the
1918 strain in many significant ways, and that it's a relatively common
jump for flu viruses to become virile with a few simple combinant
steps.

I do not find it objectionable to pay attention to scientists when my
life and that of my family may be at stake. There is no law that says
you must pay attention, but for our leaders not to is very
irresponsible. I am glad that Bush is at least aware of the problem,
but it would be nice to see him putting some resources toward
prevention instead of *reaction.*

As listeners to SW radio know, "Precious Bodily Fluids" are now threatened by far more than flouride. Vaccines, chemtrails, amalgam fillings are among the long list of Agents of PBF Corruption. And SWLs have been told, many times, that the Communists are but a piece of the machinery of the New World Order.

However, with a few minor updates, Gen. Jack D. Ripper could come back as a first rate SW radio talk show host!

1184. OT God told me to invade Iraq, Bush tells Palestinian ministers

Newsgroup: rec.radio.shortwave
Date: 2005-10-06 16:41:28 UTC

This press release is embargoed until 2230 hours on Thursday 6 October. Before that time it is only available through the link which you have been sent.

President George W. Bush told Palestinian ministers that God had told him to invade Afghanistan and Iraq - and create a Palestinian State, a new BBC series reveals.

In Elusive Peace: Israel and the Arabs, a major three-part series on BBC TWO (at 9.00pm on Monday 10, Monday 17 and Monday 24 October), Abu Mazen, Palestinian Prime Minister, and Nabil Shaath, his Foreign Minister, describe their first meeting with President Bush in June 2003.

Nabil Shaath says: "President Bush said to all of us: 'I'm driven with a mission from God. God would tell me, "George, go and fight those terrorists in Afghanistan." And I did, and then God would tell me, "George, go and end the tyranny in Iraq ï¿½" And I did. And now, again, I feel God's words coming to me, "Go get the Palestinians their state and get the Israelis their security, and get peace in the Middle East." And by God I'm gonna do it.'"

Abu Mazen was at the same meeting and recounts how President Bush told him: "I have a moral and religious obligation. So I will get you a Palestinian state."

The series charts the attempts to bring peace to the Middle East, from Bill Clinton's peace talks in 1999/2000 to Israel's withdrawal from Gaza last August.

Norma Percy, series producer of The 50 Years War (1998) returns, with producers Mark Anderson and Dan Edge, to tell the inside story of another seven years of crisis.

Presidents and Prime Ministers, their generals and ministers tell what happened behind closed doors as peace talks failed and the intifada exploded.

Israel and the Arabs: Elusive Peace - Mondays 10, 17 and 24 October, from 9.00 to 10.00pm on BBC TWO.

Britain's War on Pigs

Pigs are disappearing all over England, but not because of some porcine variant of Mad Cow Disease: rather, the most implacable foe of the swine is turning out to be multiculturalism.

The latest assault came in the benefits department at Dudley Council, West Midlands, where employees were told that they were no longer allowed to have any representations of pigs at their desks. Some had little porcine porcelain figurines. Others had toys or calendars of cute little pigs. One had a tissue box depicting Winnie the Pooh and Piglet. All of this had to go, not because of new some new anti-kitsch ordinance, but because Muslims might be offended - particularly now, what with Ramadan beginning. How could a pious Muslim in the Dudley Council, West Midlands benefits department redouble his efforts to conform his life to the will of Allah with all these...pigs staring him in the face? It was an insult!

>But what happened to the B Battery

No we don't. We have AA, C and D Cells. A battery consists of more
than one cell.

(BTW, they beat the hell out of this in one of the newsgroups, I think
here, but it might have been sci.electronics.design a year or two back.
Google for it. And the URLs for the final truth).

And, as I remember it, there was (a now obselete) B size Cell, not to
be confused with the A,B,C power supplies.

Yes sir ee cuhulin
We like dem Goodwill stores

Wife walked into a Goodwill store and spotted a pristine Peter Kitchell acrylic painting 5x7 feet

Asked da clerk how much -- reply it's expensive - $45

Wife sed wrap it up -- going price $499

On another occasion she and a friend spotted a barrel of dirty linens, ersatz china, and junk in a barrel
At the bottom was an award given to a 30's Pilot named McCreedy
Signed by Hap Arnold, Jimmy Doolittle, Charles Lindberg, Roscoe Turner and others

And I bought a like new Simpson 260 VOM for $5

One woman's junk is another's treasure

See auction 5815407393. It'd be neat to have the whole set, but too pricey for me at the moment. It'll be interesting to see what the winning bid is.

Steve

Small correction; Amgen in Eastern Ventura County.

As near as I can tell, the Government has given up helping anyone
except select big businesses (i.e friends of the President). Period.

Hi.
My NRD 525 has developed a fault.
It seems to be a power break down ?
After about 30mins use it flickers on and off rapidly.
The display flashes on and off , as does the sound.
It then settles again.
Any body any ideas as to the problem ?
Where can i get it fixed in the UK ?
I want a reliable JRC dealer who wont rip me off !
Thank you
Jeff

I once owned the Lowe combo- but quickly saw that having all the pieces conflicted with the beauty of the 150 itself- mainly its small highly portable footprint. If this is one's goal, he would be better served to look for a 225 or 250 and keep the 150 for what it does best- hi performance in a portable package.
Then again, if you just HAVE to have it....

>*prevention* instead of *reaction.*

This is more than some scientists and public health officals raising
a warning. (They've been doing that all along). It's starting to
sound (and smell) like a orchestrated campaign to scare the crap out of
the public. The BBC World Service radio had some segments on it, the
US national networks have had evening news segments on it, the local TV
news, likewise. It's the cover story of this month's National Geographic.
The local PBS station had a rerun of the "Secrets of the Dead" episode on
the 1918 flu last night, and today on the front page of the local paper
(Seattle Times) is an article about the re-creation of the 1918 virus
by the CDC. Bush gets a press conference question on it.

All for something that hasn't really happened yet. The 60-80 dead so
far have been (with a few exceptions) in direct contact with sick birds.

There's one or more agendas being promoted here. Drug companies trying
to boost sales? Homeland Security trying to squeeze another freedom to
death? Public Heath systems trying to get their budget up to what it
should be? Or just another Media Scare to boost ratings?

Yeah - I collect old advertising, and many ads from radio manufacturers in the thirties - well into the forties - say something like: "Radios for home AND FARM" (emphasis mine). That meant the old battery-operated ones.

I'll guarantee ya'll one thing.....Mark has never been in any form of Basic Training. And if he was he was discharged way before the first 10 days.

A candidate for a barracks party if I ever saw one.

The Underdog is the one to always bet on.Underdog knows he HAS! to fight for his life.Back in the 1950's and up to about the mid 1960's,I owned a Cocker Spaniel dog.I had named him Tom Dooley because of that Tom Dooley song.Once in a while my dog would wander off to over there on Carter Circle (the street I live on T's into Carter Circle) and sometimes he would get in some dog fights over there,I could hear them getting at it.After a while,he would come walking back home and I would say to him,,, Well,Tom Dooley,did you win or lose? He would go drink some water and eat some of his dog food and lay down and go to sleep.I hope if he was having dreams of his dog fights,he always won.

To date 60 years have passed since the conclusion of the world war that ended in 1945. According to traditional Chinese theories, 60 years is one large cycle.
...
Why does 60 years equal a large cycle? It is because most of those who experience direct lessons from the events pass away during that period. The generations that grow up in a peaceful environment are not used to imagining bad things done by our human race. They take those bitter lessons simply as stories to listen to. They cannot endure the temptation of material interests, and they would rather forget those bitter lessons.
...
Current circumstances today are very similar to those before World War II. Under the momentum of fanatical nationalism, the Chinese Communist Party (CCP) has been colluding with North Korea and other rogue states to move step by step towards war. Western politicians and media deliberately conceal the truth of the matter for the sake of their own business interests. China's war hawks have become more and more unbridled, threatening to use nuclear weapons against America on many occasions, while China's peaceful and democratic factions are being suppressed. This is almost a carbon copy of the political situations in Germany and Japan before World War II. A war is rapidly approaching us.

No recent shortwave thrift finds, but I've picked up over the last month or so...

70s era Panasonic 1401D AM radio... Panasonic's version of the GE Superadio for $5
60s era Sony reel to reel recorder... nice and quite expensive when new for $5
Polaroid SX-70 camera... with case and all documentation for $5
60s era Sony mini 5" TV with Sony car antenna... all boxed for $5
Weller EC2000 soldering station with variable temp and digital display... nice for $2
Curtis Mathes laser videodisc player... like new with remote and manual for $10
Video transfer kit in the box that transfers slides and 8mm movies to video... for $5
Kodak Moviedeck 8mm projector... like new for $3
Professional Metz electronic flash with neck strap type control box... for $7
Seiko world digital clock with very fancy display... for $2

This isn't counting all the fairly expensive shoes/sandals by Teva, Ecco, Timberland, Birkenstock and apparel by Nike, Adidas, Tommy, New Balance that I've found for a buck or two.

Anymore I check out the local thrifts at least every other day. People are donating right now like there's no tomorrow. Katrina has really got people cleaning house and donating stuff. More people need to check out thrift stores for some awesome bargains! No wonder people make a fortune selling on Ebay...

Jeff, sorry, I can't help you with a diagnosis, or with a repair shop in the UK. But you might want to try powering the radio with an external power supply or battery. That could help you isolate the problem, and it might be a satisfactory remedy for you.

I own one of those little Sony 50's era tv sets with the clip on car antenna and the little carrying case that looks sort of like a woman's little bitty suitcase.I bought it at a pawn shop in Killeen,Texas (next door to Fort Hood,Texas) when I was at Fort Hood in 1965.I used to hang it from the top bunk in our old two story wooden barracks with a coat hanger.Us guys used to watch tv with my little bitty Sony tv set.Later on,it got to where there is nothing but a thin narrow white line on my little Sony tv set.It's a very nice looking little Sony tv set though.

Oh please. War is the usual condition of the world. It never stopped and keeps right on going. Bunch of silly paranoid rich people are only talking about war being brought to them.

Dumb shits -- wait until England finds they have to rid the
country of most china, sinks, stoves, many false teeth, toilet bowls
and tanks. Why? Because all the above items are composed of, or
surfaced with, porcelain. The word porcelain derives from the French
word for pig, since early objects made of porcelain were often pig
figurines.

Someone should tell them where to ramadan this idiocy.
Sideways.

You ever seen an old growth forest. Renewable in maybe 500 years or 1000 years in some cases. Much of the world has lost its large animals, we're losing glaciers and pack ice. Old growth is worth alot of money and greedy people are everywhere. The world is finite in its resources. We'd like to keep at least some of the old forest, and not just as beams in fancy building or as toilet tissue.

I think that the world is faced with a problem lacking any politically correct solutions.
The point has now come where minorities are able to impose their will upon whole nations, simply by instilling fear in society, as a whole.
The so called "good Muslims" cannot continue to pretend neutrality, while supporting, covertly, the destruction of Western Civilization.
Your grandchildren, and, possibly mine, may live as an opressed minority, in the lands of our ancestors.
Tony Bair can only do as much as the people of the UK will support. Are you angry enough, yet?
I watch as You Brits busily, and self righteously, disarm yourselves, even to the point of discussing a ban on pointed knives. I hope you never need one, and don't have one. Someone else just may!

Each time I go to a Indian store looking for music, I always whine up getting music I do not like 'Lata'.

I am looking for that female very high voice. Some say that it is Bollywood others say it is classical others say it is Indian Jazz, LOL!

Soon I will add a tape recorder to my sw radio and record it when I hear it.

Around 40 years old is not really young! I still could remember the old phone booth, checker cabs, automats, cat-clocks, news-stands, strap-hanggers & milkmen!

Older things were rear and offered so much!

But thanks anyway!

- Germany had come from a " Starvation" /Hyperinflation
situation.

People were going through garbage dumps looking for food..

Anyone who had a job would get paid at noon and then shop for food..
because by 5:00 their pay would be virtually worthless.
Currency was carried around in Wheelbarrows..

Our government is inept, and corrupt, and arrogant
but
- the US right now is not like Germany 1938

Yes, it is a Wadley Loop type. There is a multi-gang tuning capacitor that is stepped by an indexing mechanism. This is how the band stops are achieved.
Earlier models used a Murata CFU-455H 4-element ceramic filter for the wide I.F. bandwidth, while the Orange model used a CFWS-455H 6-element ceramic filter. Because of this better filter, the skirt selectivity of the Orange model was a bit better.
I don't know if Sony ever solved the PLL problem by the time the Orange model came out. It seems that at least one of the buffer amp transistors in the PLL circuit would lose gain over time. The result would be that the unit would go out of lock at the high end of the VFO range.

1261. Correction of new AIR 60 mb fqs

Newsgroup: rec.radio.shortwave
Date: 2005-10-07 11:24:34 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <43465AF2.A489939B@milestones.com>
Source record: 43521

Dear Friends,

According to the info I have the following are the new
60 meter fqs of AIR.

4810 50 kW Bhopal 0025-0215,1130-1742 (ex 3315)

4870 10 kW Gangtok 0100-0400,1030-1600 (Sun
1630)(ex.3390)

4980 50 kW Shimla 0025-0200,1300-1730 (Sat,Sun 1741)
(ex 3223)

The Old message from dxasia.info was as follows:

AIR finalises move from 3 MHz to 5 MHz
5 October 2005

All India Radio has finalised the move from 3 MHz to 5
MHz effective 30th
October:
Bhopal 4810 kHz
Shimla 4870 kHz
Gangtok 4980 kHz

The K7RA Solar Update

SEATTLE, WA, Oct 6, 2005--This week's Solar Update is being
posted one day earlier than usual. Solar activity was down for the
week. In fact we saw several days of no sunspots at all. October 1,
2 and 3 each had a daily sunspot number of zero. Sunspot
numbers are slowly rising as sunspot 813 rotates to face Earth, but
the average for the week dropped more than 18 points to 11.6.
Sunspot numbers and solar flux may rise but probably not by much.
As mentioned last week, we're waiting to see what the return of
giant sunspot 798 will bring, but as that area shifts into view, only a
few wisps are visible. This would indicate that the area is
magnetically much less complex than what came around the past
two rotations.

Over the next year as this cycle 23 bottoms out, we will see long
stretches of days--maybe even weeks--with no sunspots at all. This
is based on the behavior of past solar cycles.

With lower solar activity came very little geomagnetic activity. The
numbers reported in last week's bulletin were low, but the weekly
average for planetary and mid-latitude A index dropped even
lower--by about one point each. If you can check the Daily
Geomagnetic Data from the Space Environment Center over the
next few weeks before the data disappear, you can see the days
with reading after reading of K index equal to zero. With the K index
vacillating between zero and one, the result is a daily A index of
two or four. If you take the eight K index readings and they average
to 2, this gives you an A index for the day of 7. If the average is around
2.333, then the A index
is 9.

These periods of low geomagnetic activity are great for 160 and 80 meters.
Atmospheric noise
is also much lower than in summer, and periods of darkness are getting longer.

Over the next week expect sunspot activity to remain low, and solar flux should
hover around
85. Planetary A index for the next five days, October 6-10 is predicted at 8,
10, 5, 8 and 12. The
next period of moderately active geomagnetic conditions is forecast for October
12, based on
the last solar rotation.

Sgt Korey Chandler, YI9VCQ/KA5VCQ, e-mailed from Iraq about propagation from
that part of

the world. "I just wanted to comment that I've had very good luck on 12-meter CW for the past
week. Conditions have been solid to Germany, Bulgaria, Russia, and Ukraine at around
1000-1500 UTC," he wrote September 30. "10-meters hasn't been as good, but 15 showed
several nice openings to Asia and Australia. 40 meters is showing a nice start towards winter
conditions, since I'm now working stations with my low dipole."

Chandler says he typically starts on whatever band is open and works his way higher, using
W6ELprop as a guide. "Of course, I'll throw out a few CQs on each band just to check for
surprises," he adds. He says there's very little CW operation out of Iraq, and 30 meters is one of
his favorite bands. He also operated digital modes and has logged 11,000 QSOs so far, the vast
majority on CW. "Hope to see you on the bands!"

Chandler mentioned W6ELprop, which has been listed here many times before. Probably the
best way to use it is with the predicted smoothed sunspot number for the month, or you can
average the previous several days of sunspot numbers available from the SEC Web site.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page.

Sunspot numbers for September 29 through October 5 were 22, 13, 0, 0, 0, 15 and 31, with a
mean of 11.6. The 10.7 cm flux was 73.8, 72.2, 72.1, 74.9, 74.3, 82.7, and 81.3, with a mean of
75.9. Estimated planetary A indices were 6, 11, 13, 13, 7, 4 and 4, with a mean of 8.3. Estimated
mid-latitude A indices were 5, 6, 10, 8, 5, 2 and 2, with a mean of 5.4.

Hello:

Just came across, by accident, the BBC site talking about their DAB digital offerings.

Was wondering -

How long has this been around ?

Are there any broadcasts like this in the U.S. ?

What's needed, or available, to pick it up ?

Possible to receive the BBC DAB stuff here in the U.S. ?

Thanks,
B.

From: Robert11 <rgsros@notme.com>
Message-ID: <zb-dnSX9WaVoHNvenZ2dnUVZ_tOdnZ2d@comcast.com>
Source record: 43533

Hello:

Getting back into listening mode now that I'm retired and have some time for all of this "fun" stuff.

Would like to monitor some Coast Guard and Maritime Comm's, have tried many of the listed ones, but haven't had much luck.

Live about 20 miles dues West of Boston, Mass.

Guess the secret is, perhaps, to know which are fairly often utilized.

So, let me please ask -

a. Can anyone perhaps recommend some fairly active freqs in the "up to 30 MHz" range
that I can try from my location ? Would all of these be USB ?

b. How about the VHF freq's ? I realize that these are line-of-sight, but any worth trying
from my location ? Would all of these be fm ?

Much thanks,
Bob

I own a Sony AM/FM PLL Synthesized Stereo Receiver.FM/AM Walkman.14 Memory Presets,Model NO.SRF-M40W (it isn't easy to snap that little pocket clip off the back so I can read the model no.) It has an OFF/ON slide switch on top and a thumb wheel on top for adjusting the volume,an earphone jack on top,three slide swiitches on one side of the radio,one for FM Stereo,FM Mono,and AM.Another slide switch for FM Sens DX and Local.Another push release slide switch for Enter.Two push buttons on the front for Tune. (tune up and tune down) and seven other push buttons on the front for selecting pretuned stations.Differnt stations can be selected and entered at any time.It doesn't have a built in speaker,so if I want to use the radio,I use an earbud/earphone.The radio uses two AA batteries and the radio pulls in distant stations very well too.I also own a Sony AM/FM casette tape player/tape recoeder radio,it is a very nice little radio,Model NO.WM-AF604/BF604.It isn't a PLL though,it has a sliding dial indicator on it for tuneing AM/FM stations.I own another different,brand name PLL little radio.It is floatin around here somewhere,it would take me a while to find it though.

It took a Wheelbarrow load of Marks to buy a single loaf of Bread.(really,it did) When I used to drive a Bread Truck for Sunbeam Bakery many years ago,in the Star supermarket stores,we used to use a magic marker and on the Bread,we marked,2/39.Two big loafs (which reminds me.how is Maryann Kehoe doing nowdays?) of Sunbeam Bread (don't say Bread,say Sunbeam) for thirty nine cents.Of course,the Star supermarkets around here were getting a kick back from Sunbeam Bakery. cuhulin

Hi,

Thanks for reply.

Guess I missed from the BBC site that their service was also a subscription
fee based service like XM and Sirius.
Guess it's the coming trend.

B.

Hi,

Thanks for info.; will give them a try.

BTW: are these Coast Guard aero freq's only ?

Or, are they used for maritime shore to ship type of comms also ?

Thanks,
B.

What exactly do you consider "informed"? It's dark grey and black... If
"orange" refers to something other than the color, then why don't you take a
few minutes to "inform" me, instead of being the one who responds like a
"wise ass!"

Well, you can find that type of female vocal in a number of types of Indian music, from filmi stuff to devotional (e.g. bhajans). Because reception of AIR is never quite spectacular in the U.S., if you're trying to find music to listen to, then you might try going to one of the Indian music websites to sample music of different genres.
As for Lata Mangeshkar, well, she's been around for a long time and is something of a legend. Her voice has, however, aged, although many Indians are loathe to admit that fact. She needs to retire from singing because she just no longer has it.

Try this link:

http://ww.smashits.com/index.cfm?Page=Audio

You can sample a lot of music there. The Hindi Film Music category is where you're likely to find a lot of the Bollywood music that is enjoying increasing attention in the U.S.

As far as Hindi film music goes, I would recommend the following:

http://ww.smashits.com/music/oldies/songs/688/umrao-jaan.html

All the best...

You'd best move this exchange to alt.radio.satellite

Satellite radio is extremely taboo here! There are those with an
irrational hatred/fear of satellite radio in this forum! The mere
mention of satellite radio in this forum is a good way to invite verbal
abuse and ostracism. It is like a welcome mat for receiving intense
scorn, hatred, etc.
For your own sake and for the sake of your unborn child, take this
topic elsewhere at once or...or else I suggest you make your peace with
your god(s) in these few remaining moments.

>All for something that hasn't really happened yet. The 60-80 dead so far have been (with a few exceptions) in direct contact with sick birds. <

I guess you don't believe in being prepared for a scenario that has played out more than once in the past...?

>There's one or more agendas being promoted here. Drug companies trying to boost sales? Homeland Security trying to squeeze another freedom to

death? Public Heath systems trying to get their budget up to what it should be? Or just another Media Scare to boost ratings? <

I have a question - does it not make more sense to be safe than sorry, to take the basic element of truth from this story (potentially dangerous disease) and move forward progressively toward a solution, than to worry about whether there is some ulterior motive with some part of society? If we have tens of millions of dead people to bury in the US, much of what you are worried about is going to seem like pretty small potatoes. Talk about throwing out the baby with the bathwater...

I just removed the fuse and holder.
The end of the fuse was black and coated.
I cleaned the contact and put the fuse back in.
Hope his cures the problem ?
Thank you again

I had a similar problem. The fuse was not making contact with the fuse
holder on one end.

I put some solder on the ends of the fuse. The problem never returned.

--Mike L.<

Not to help along David's argument (sometimes I agree with him,
sometimes not), but in this case, it appears that Neanderthal's simply
did not have the adaptive ability to progress into the harshest parts
of the Ice Ages...thus, we have a modern human that derives only from
one (sub)species - CroMagnon - instead of two.

Neanderthal's were capable of fighting - strong and powerful - but they
were not adept at keeping themselves warm and fed.

Having said this, I think war in some form is at least as old as
humanity (wherever contrasting groups either found each other
distasteful or needed the others' resources), and even Jane Goodall has
admitted that groups of her beloved chimpanzees have occasionally made
limited provincial war upon one another...so, maybe even as old as
primates. not that I'm happy about this, but - the evidence is there.

The adaptive ability did have an impact, but interactions
between CroMagnon man and Neanderthal were probably
not very lovey-dovey, either.

> Neanderthal's were capable of fighting - strong and powerful - but
they
> were not adept at keeping themselves warm and fed.

Yes, you're correct. If you dressed one up and
put him on the street, he'd fit in. Look like a
hairier and slightly heavier jawed version of
Jack Black, but he'd fit in.

I don't doubt that war in some form or another (as opposed
to hunting) is another method of distinguishing between
the primates and other animals. Considering the records
of war that date back millenia in India, China and the Near
East, I'm sure that war is as old as man itself.

1328. Re: WAR on PIGS

Newsgroup: rec.radio.shortwave
Date: 2005-10-07 21:24:12 UTC
From: "Keith and Phil at AussieSeek.com Political Messageboards" <nswamfm@yahoo.com>
Message-ID: <1128720252.785035.177710@g14g2000cwa.googlegroups.com>
Source record: 43740

It is always interesting to see what the politically correct people will think up next. Mark and I were talking about gollywogs the other day to discover that the entire generation after ours can't visualize them as they have never seen one. Yet I owned one. And I ate numerous Marie Biscuits covered with chocolate icing and decorated into gollywog faces at parties. The PC people made gollywogs not only an endangered species, but a lost one, robbing black children of a representation of their heritage in the process. Yes, I said "heritage". Children appreciate having representations, and they don't have to be accurate, of their own reality with which to play. The gollywog, while an exaggerated and inaccurate figure of black people, was akin to the figure of clowns, scarecrows and hoboes. For it to be lost is sad for all children, but particularly black children. Just my opinion.

Pigs. Well, I've never had a collection of pigs or frogs or cows, but these are all things people collect in harmless fun. It never occurred to me that there would be people who would *seriously* take offence. I wonder if there are such people? Interesting, indeed, because Jews have considered pigs to be "tref" yet they have never, as far as I know, been excluded from reading "Winnie the Poor" on account of poor Piglet.

Who are Palestinians Nabil Shaath & Mahmoud Abbas from the "Bush said" story?

Nabil Shaath joined PLO (a terrorist organization) in 1970 and served as an adviser to Fatah from 1971. Dr. Shaath became the head of the PLO Planning Center 1971 - 1981. Dr. Shaath has been the Palestinian Authority's Minister of Planning and International Cooperation. He is a member of the Fatah Central Committee.

MYTH

In a Lateline interview with the Australian Broadcasting Corporation, Dr. Shaath perpetuated the myth that there was a massacre at the Jenin refugee camp by using terms like ".absolutely horrifying." and making comparisons to the devastation in Bosnia and Herzegovina.

FACT

Secretary of State Colin Powell concisely refuted Palestinian claims that Israel was guilty of atrocities in Jenin. "I see no evidence that would support a massacre took place."62 Powell's view was subsequently confirmed by the United Nations, Human Rights Watch and an investigation by the European Union.

Mahmoud Abbas (A.K.A. ABU MAZEN) earned his doctorate in Moscow during the Cold War. His doctoral thesis later became a book, "The Other Side: the Secret Relationship Between Nazism and Zionism". [Read Double Lives: Stalin, Willi M&#65533;nzenberg and the Seduction of the Intellectuals for a description of KGB disinformation activity, espionage and memetic warfare: http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=19658]

One of the founding members of Fatah in 1957, he has been charged with involvement in terrorism.

Unfortunately, it's not that simple or easy. Vaccines are often made from attenuated or wholly inactivated viruses and Sinovac is working on a partially inactivated H5N1 vaccine. However, there is no guarantee that the immunity garnered from a vaccine of H5N1 would carry through to a mutated, highly virulent version of the strain. If sufficient mutation were to occur then the H5N1 vaccine would be useless and you would be back to square one with having to make a vaccine from the mutated strain. Vaccine development could take 3-6 months or longer and in that time a highly virulent, pathogenic strain could cause a considerable number of deaths.

That's the short version of the story :-)

1350. Re: David Frost Joins Terrorist Network

Newsgroup: rec.radio.shortwave
Date: 2005-10-08 02:09:26 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11keaog8d2089b0@corp.supernews.com>
Source record: 43563

http://www.discoverthenetwork.com/groupProfile.asp?grpid=6962

Al Jazeera features a weekly religious show hosted by terrorist group Muslim Brotherhood's spiritual leader, Sheikh Yusuf Al-Qaradawi--who issues fatwas urging homicide bombings in Israel and against U.S. soldiers in Iraq.

Iraq government documents captured after the fall of Baghdad found that reporters had secretly worked with, and probably for, agents of Saddam Hussein's brutal intelligence agency the Mukhabarat. All had played roles in Al Jazeera's pro-Hussein and anti-American reporting.

Gave airtime to racist David Duke to claim that Jews knew in advance of 9-11 attack on World Trade Center and stayed away .

In 1996 the British Broadcasting Corporation (BBC) World Service Arabic language TV station shut down after two years of operation rather than submit to censorship and other political pressures in Saudi Arabia. Months later Al Jazeera was launched in adjacent Qatar. Created by a $150 million grant from the Emir of Qatar, the new Arabic language broadcaster hired many of those who had worked for the Arabic BBC station.

Today Al Jazeera rivals the global viewership of BBC World Service and since January 2003 has had an agreement to share its reports with BBC. [Like the "Bush said 'God told me'" propaganda story.]

"It's pretty hard to adequately describe the level of bloodiness during an average Al Jazeera newcast," wrote Michael Wolff. "It's mesmerizing bloodiness. It's not just red but gooey. There's no cutaway. They hold the shot for the full viscous effect. It's vastly grislier than anything that's ever been shown on television before. It's snuff-film caliber.. The Al Jazeera correspondents seem a little sheepish about their network's over-the-topness..'We have to speak to our audience,'" one of its reporters told Wolff.

"The better Al Jazeera does, the angrier the Arabs become," wrote Wolff. "The more anti-U.S. and anti-Israel, the higher ratings it gets."

"You don't have to look too closely to find that Al Jazeera also inhabits the far side of the ideological moon," wrote Wolff, "and is as responsible for the region's departures from reality as anyone." By amplifying the views of terrorists, giving a one-sided view of bloodshed in the Middle East and encouraging both fear and loathing, Al Jazeera has at a minimum abetted terrorism. At a maximum, Al Jazeera's reporters and executives have crossed the line between commentary and complicity by working hand in glove with terrorists.

I'll bet it was carbon build-up from arcing. The solder trick someone
mentioned below should work.

I suspect you've found the problem.

From the King James Bilble:

The Book of Mark Chapter 13:7

And when ye shall hear of wars and
rumours of wars, be ye not troubled: for
such things must needs be; but the end
shall not be yet.

If the SC agrees that an organization, regardless of its
illegal agenda, yet retains some constituional rights, then who the
hell are you to assert otherwise.\?

> I'm sure many NAMBLA members are also home-owners and tax-payers.

ANd if they quit paying taxes, the Feds wll go after them for
tax evasion, not for being a member of NAMBLA. Just curious, why are
you so obsessed with them -- did they turn down your application.

>That still does not excuse your support of the defense of a national
>organization that promotes the sexual abuse of little boys.

No support of the organization's agenda, just of the
organization which defended the ight the SC declared they have. If you
can't make that distinction, you're too fucking stipid to go any
farther with. Just declare your victory and prance off the field.

here are the stockpiles you requested...the lib media just keeps covering up and I can not for the life of me understand why the Bush Admin lets them get away with it

With Carl Limbacher and NewsMax.com Staff
For the story behind the story...

Sunday, July 17, 2005 5:08 p.m. EDT
The Uranium Joe Wilson Didn't Mention

By April 2003, when the U.S. invaded Iraq, Saddam Hussein had stockpiled 500 tons of yellowcake uranium at his al Tuwaitha nuclear weapons development plant south of Baghdad.

That intriguing little detail is almost never mentioned by the big media, who prefer to chant the mantra "Iraq had no weapons of mass destruction" while echoing Joseph Wilson's claim that "Bush lied" about Iraq seeking more of the nuclear material in Niger.

Story Continues Below

The media's decision to put the Wilson-Plame affair back on the front burner, however, may turn out to be a blessing in disguise for President Bush - giving his administration a chance to resurrect an important debate they conceded far too easily about the weapons of mass destruction threat posed by Saddam Hussein.
First, the facts - from a reliable critic of the White House, the New York Times, which covered the story long after the paper announced it was tightening its standards on WMD news out of Iraq.

"The United States has informed an international agency that oversees nuclear materials that it intends to move hundreds of tons of uranium from a sealed repository south of Baghdad to a more secure place outside Iraq," the paper announced in a little-noticed May 2004 report.

"The repository, at Tuwaitha, a centerpiece of Saddam Hussein's nuclear weapons program until it was largely shut down after the first Persian Gulf war in 1991, holds more than 500 tons of uranium," the paper revealed, before insisting: "None of it [is] enriched enough to be used directly in a nuclear weapon."

Well, almost none.

The Times went on to report that amidst Saddam's yellowcake stockpile, U.S. weapons inspectors found "some 1.8 tons" that they "classified as low-enriched uranium."

The paper conceded that while Saddam's nearly 2 tons of partially enriched uranium was "a more potent form" of the nuclear fuel, it was "still not sufficient for a weapon."

Consulted about the low-enriched uranium discovery, however, Ivan Oelrich, a physicist at the Federation of American Scientists, told the Associated Press that if it was of the 3 percent to 5 percent level of enrichment common in fuel for commercial power reactors, the 1.8 tons could be used to produce enough highly enriched uranium to make a single nuclear bomb.

And Thomas B. Cochran, director of the nuclear program at the Natural Resources Defense Council, told the Times that the low-enriched uranium could be useful to a nation with nuclear ambitions.

"A country like Iran could convert that into weapons-grade material with a lot fewer centrifuges than would be required with natural uranium," he explained.

Luckily, Iraq didn't have even the small number of centrifuges necessary to get the job done.

Or did it?

The physicist tapped by Saddam to run his centrifuge program says that after the first Gulf War, the program was largely dismantled. But it wasn't destroyed.

In fact, according to what he wrote in his 2004 book, "The Bomb in My Garden," Dr. Mahdi Obeidi told U.S. interrogators: "Saddam kept funding the IAEC [Iraq Atomic Energy Commission] from 1991 ... until the war in 2003."

"I was developing the centrifuge for the weapons" right through 1997, he revealed.

And after that, Dr. Obeidi said, Saddam ordered him under penalty of death to keep the technology available to resume Iraq's nuke program at a moment's notice.

Dr. Obeidi said he buried "the full set of blueprints, designs - everything to restart the centrifuge program - along with some critical components of the centrifuge" under the garden of his Baghdad home.

"I had to maintain the program to the bitter end," he explained. All the while the Iraqi physicist was aware that he held the key to Saddam's continuing nuclear ambitions.

"The centrifuge is the single most dangerous piece of nuclear technology," Dr. Obeidi says in his book. "With advances in centrifuge technology, it is now possible to conceal a uranium enrichment program inside a single warehouse."

Consider: 500 tons of yellowcake stored at Saddam's old nuclear weapons plant, where he'd managed to partially enrich 1.8 tons. And the

equipment and blueprints that could enrich enough uranium to make a bomb stored away for safekeeping. And all of it at the Iraqi dictator's disposal.

If the average American were aware of these undisputed facts, the debate over Iraq's weapons of mass destruction would have been decided long ago - in President Bush's favor.

One more detail that Mr. Wilson and his media backers don't like to discuss: There's a reason Niger was such a likely candidate for Saddam's uranium shopping spree.

Responding to the firestorm that erupted after Wilson's July 2003 column, Prime Minister Tony Blair told reporters:

"In case people should think that the whole idea of a link between Iraq and Niger was some invention, in the 1980s we know for sure that Iraq purchased round about 270 tons of uranium from Niger."

Same mentality as the wackos down by LA who passed a law
requiring the city to lean on the manufacturers of disk drives to
delete the terms master and slave from the drives and the instructions
on how to configure them.

Same with master and slave flash units for photography and any
number of similar industrial usages.

If they have their way, we've seen the last master contract in
labor negotiations.

Then we have the fanatical Christian fundies who won't
tolerate the use of "Sun Devils" for an Arizona sports team, want to
change the name of Mt. Diablo in California and want Harry Potter
banned from libraries because of references to witchcraft.

A pox on all of them.

A Farm radio was one designed to run on 32 volts DC, provided by a
wind charger and battery bank. The filaments were in series, and the B+
was provided by a 32 volt vibrator and step-up transformer.

We called them flip clocks because all of the individual time number where on these black flat plastic squares about the size of a book of matches. It was a mechanism that cause each time number to flipped over each other. Their was minute flips and hours flips, no second flips.

As kids we would play a game and stare at the minute line waiting to catch the flip as it happened. After doing this strange game we played we sometimes felt mesmerize.

One bad thing about these clocks, after a while the little squares would brake off the cob. And if enough broke off, we could unplug the clock afraid for burning the motor causing a fire.

Most of these clocks were for bed rooms. Some were alarm clock. Some had medium am radio, not sure if they had fm radio. I had never seen one with shortwave.

I have not seem these clocks in years.

It was in the 70's when people had tiger pillows, lighted slim telephones, mood rings, Rock 'em Sock 'em, Webbells and don't forget the bell bottoms!

73 SR!

We had a Panasonic given to us as a wedding present, and it had
AM/FM. The clocks were usually called "page digital" clocks, and the
inevitable problem with them was exactly as SR says. Good clock radio
for about 7 years, though.

FDR - " support the raping of boys and sexual humiliation
by our servicemen there. "
.
FDR - So this is 'your' personal first hand experiance ?
.
Or - FDR - Are 'you' simply repeating the Daily Talking
Points of the Democrat Party of the USA ? ? ?
.
I thought that the Democrat 'cover' Mantra was :
"We Support Our Troops and NOT 'bush's' War"
But now we can all see the true color of FDR and
his Democrat Party of the USA Masters. They in
fact Do Not Support Our Troops [.] They have
become wedded to the anti-war movement and
turned on our troops and against the nation for
their own political gain.
.
FDR - Thank You for being a 'poster-boy' for
the Lies of the Democrat Party of the USA.

God {Allah} Bless America - Amen.
.
God's {Allah's} Blessing Be With Our Troops - Amen
.
God's {Allah's} Goodness and Mercy be
with the Family, Friends and Loved Ones
of All Who Serve This Great Nation, and
We All Say : amen, Amen. and AMEN !

That's cool. As far as I know they do not make them anymore. I can not even find the Kit Kat Clock.

I sometimes see that old boring off white square little electric clock at stores like Rite Aid. The one that you can hear the motor if you sleep near it. It also has an orange light to it. I think it's called a Westwood clock.

I never had a coco or grand father clock. Most of my clocks were radio alarm clocks. The radio never really work well in them.

I do have a cool looking Sears AM-FM Stereo alarm clock I purchased at at junk yard. It's also probably from the 70's. Red digital numbers, fake wood on top and sides crome front headphone hole. Probably the best clock radio I'd ever had. Strange that the wake up tone is very low. Below middle c. The model number is 668.23970900. Made in Hong Kong. It could of had be among the first digital clocks when it came out. I do remember when digital watches came out in the mid-late 70's.

And it has a tone button which is never found on clock radios. It might be one of that last of the electronics Sear made.

I am looking around for a Westinghouse and a Telefunken radio (not a clock radio necessary) to add to my junk radio closet collection.

Oh well.

SR

BpnJ,
.
A single un-tapped Main Tuning Coil with the 'right'
Main Tuning Capacitor should cover the entire
AM/MW Boardcast Band from 530 to 1700 kHz.
He also say that two interchangable Main Tuning
Coils could be used for High Band and Low Band.

Do you think that those accused of murder or rape or other crimes should
have a lawyer as prescribed by our government? If they should, then aren't
the lawyers supporting the suspected criminals? Or should we not let
suspected criminals have any representation and let everyone who is arrested
and charged just be sent to prison?

I own two Telefunken radios.One of them is a floor model wooden cabinet AM/FM/Shortwave radio with a phonograph built in the top of it.The radio has a metal (pot metal?,it is sort of warped) sign thingy on the front that says Grundig.The owners manual and another little manual all pertains/says Telefunken,but oviously,the two little manuals pertains to the radio.The only thing I could find pertaining to the date of manufacture of the radio looks to me like 1957,1957 printed on one of the pages in one of the radio manuals.My other Telefunken radio is a big wooden cabinet AM/FM/Shortwave table model radio.There is a little manual inside of an envelope.The envelope is glued to the inside of the rear panel of the radio.I never did see a date of manufacture on or inside of the radio or in the little manual,but I think the radio was manufactured in the 1950's or 1960's.I would have to move a lot of junk again to even get enough room to get to those two radios.I bought both of the radios at a Goodwill thrift store years ago.I paid $14.00 for the floor model radio and $4.00 for table model radio.Of course,as much as I like to hang on to my old things,I will not get rid of my old radios.

Oh, yes. We had a Panasonic flip dial clock radio for several years.
The snooze control was a small knob that was twisted to wind up a
spring driven motor. Performed well until it fell off the
nightstand....

David,
That's an outdated version the new one is much more streamlined -
however I suspect Greenpeace does not have a copy. And to keep it
somewhat on-topic; if you think reception is cruddy lately you'll
really hate it after a nuke strike.

There was an intersting variant of the flip clock sold in the mid 70s. Each of the digits were formed by moveable number segments driven by a system of cams and levers. The numbers were backlit with an incandescant bulb and it looked very much like a smaller version of the bulb digital clocks which might be seen outside banks in that time period. It's a fascinating bit of clockwork. The movement was made by Telechron.

I have a couple of these clock radios, a Sears digi-trek and an almost identical JC Penny version.

>I had never seen
> one with shortwave.

I think there were some SW clock radios in the fifties, but I wouldn't want to count on SW propagation to deliver my wake up call.

My Sears mechanical digital clock is AM-FM. The JC Penney clock radio has AM-FM and the weather band. Both are good performers.

And how does this relate to shortwave? Just because some fool decides
it's acceptable to post all kinds of off-topic nonsense here doesn't mean
others should be doing it.

Note, that clocks can apply to shortwave, but you haven't bothered
making such a connection.

I personally don't care about NAMBLA. But you sure do. You can't seem to
reconcile that NAMBLA get's the same rights as the KKK. Now I know how much
you like the KKK and would support the lynching of blacks. Why do you hate
blacks so much? And why don't you want to let NAMBLA get the same rights as
your beloved KKK.

See jd, you can sure dish it out but you can't take it.

Come back after you grow up, kid.

>

So when did Amateur Bands become NON-shortwave? Did I miss something? My
R5000
doesn't receive 38 MHz or 49 MHz - does that make it limited too?

What they think and what they do are two different things. I can say I would like to see you beaten to a pulp, but that's called freedom of expression. If I did it then it would be a crime.

We don't like what neo-Nazis, white supremacist groups, or the KKK say. However, saying it is not a crime.

Okay, I can understand how the amateur-only-coverage is *barely*
germane (since the ads are crossposted into a pair of non-ham groups),
but what *possible* consideration should the color of the poster's
backdrop be? Is it a trademark of a reputed lid, or are you just
being sarcastic?

FDR - I would support every member of NAMBLA
to have an Lawyer as prescribed by our government
to represent each and everyone of them for their
crimes against Children : Exploitation, Abuse and
Enslavement. Plus where they gather and plan
those Activities should be treated as a Criminal
Conspiracy and be closely monitored to prevent
the Abuse of Children by these Sexual Predators.
Any NAMBLA Meeting with a Felony in attendance
especially someone who has been Convicted of a
Crime Against Children {Registered Sex Offenders}
should be open to Public Scrutiny and Oversight by
Law Enforcement Agencies.
.
so say i - my opinions stated as facts ~ RHF
.

Do you also believe the police are idiots too? You don't think that the
police just "might" be taking an interest in their members. If they are
acting on their desires, then they will be caught and go to jail. I'd think
it would be helping the police to have a group come out and say they are for
that type of behavior. It would make the cops job easier. Imagine if they
had a group that was in favor of killing college co-eds. Or ones in favor
of robbing banks.

I really don't get what your problem is jd.

That is why there are limits. You

>A single un-tapped Main Tuning Coil with the 'right'
Main Tuning Capacitor should cover the entire
AM/MW Boardcast Band from 530 to 1700 kHz. <

Sure, I have no trouble with that - but taps help you to access the sweet spot on that coil so that, in coordination with your VarCap and your secondary antenna coil, you can achieve the best separation. In a city with many massive blowtorches, this ability is fairly critical.

It may be that the taps are not necessary if one inserts a VarCap into the antenna side for tuning. That'll be my next step, I think.

hi all - getting back into the listening hobby after about 10 years absent. i would like to know what the best way to receive the aformentioned modes on my new palstar r30. i use to have a program called WEFAX and HFRTTY developed by a guy called john hoot who advertised in monitoring times. about 14 years ago i paid 99.00 for the complete package and it worked great, but sold it along time ago. it connected directly to a pc via a FSK module that connected to the earphone output of the radio. what are people using now to receive these modes. was looking at a Universal M-7000 decoder, but would like some expert opinions first.

thanks in advance, John

FD,
.
Brazil - Radio Stations - Circa 1999
AM/MW Radio Broadcast Stations = 1,365
FM Radio Broadcast Stations = 296
Shortwave (SW) Radio Broadcast Stations = 161
(of which 91 are collocated with AM stations)
.
Brazil Population 186 Million People
with a Land Area total: 8.5 Million Sq Km
Maybe IBOC will work well in Brazil where
there are fewer Radio Stations and the
Radio Band is less crowded.
.
However the USA - Radio Stations - Circa 2004
AM/MW Radio Broadcast Stations = 4,854
FM Radio Broadcast Stations = 8,950
Shortwave (SW) Radio Broadcast Stations = 18
.
USA Population 296 Million People
with a Land Area total: 9.6 Million Sq Km
In the USA the Radio Band is much more
Crowded and the result of IBOC will be
that Radio Listening will be Limited to
'local' Radio Stations "Only" and DXing
as we know it will be a thing of the
past as more and more Radio Stations
start broadcasting in IBOC.
.
this is my humble opinion ~ RHF
.
.

Try Hamscope. It's a freeware download you can get from several Ham-type
websites. It will decode RTTY, CW, QPSK, BPSK, PACKET, and MFSK16 but
not FAX. It uses direct audio input from your reciever to the line in on
yor computer audio card. The only thing you may have to improvise is the
audio level from your reciever to the computer.

Good luck!

Overseas News and Information Sources Kowtow to China

Murdoch said his company was denied access to a recent China media conference in New York City that was hosted by former U.S. president Bill Clinton. Murdoch said that the Chinese government is overly sensitive to news that filters back into China and said that China had originally promised to welcome overseas media and transnational corporations to operate print and electronic media in China. However, China has once again shut its doors on overseas media-a sharp change in its policy compared to a year ago.

CNN's extensive reports on China for the past two years have almost surpassed the overseas version of the People's Daily in conforming to "party line."

Hello all

can anyone help with my problem
I have a frg 7700 that has a sensitivity problem above 16 MHz
the sensitivity drops greatly as you tune up the band from 16 MHz up to 29 MHz
when you get to 29 MHz the receiver is deaf as a post

Any help please

From John

It's just that that colour background, red, has come to be associated with a seller of some dubious nature: radiomart.

Really??? What do you base that wrong conclusion on. Remember David,
virtually all 120 v plug in the wall clocks sold these days are quartz
timed.

I set most of my clocks to the NPR time announcement. It is plenty
accurate for clocks that display time in whole minutes. And I think
you would find that most of us are able to live our lives quite well
with household clocks that are approximately accurate - within 4 or 5
minutes.

There are a zillion programs that will work it seems...
I also like hamscope for psk31,rtty, etc..But I also use
other programs which may suit a certain mode better.
IE: I use MMSSTV for SSTV. I use multipsk for the
navtex on 518kc. Just that program alone will decode
nearly anything, but it's a wee bit cluttered for all my uses.
I also use a few spectrum analyser programs, and also
a few for DSP. All these programs run off the same windows
sound card, and all are free, or have free working demos you
can d/l. I have a windows sound program for HF fax also..
There is no need to buy any decoder if you have a decent
windows sound card.

????? Every plug-in electric clock I've ever seen uses a shaded
pole motor goverend by the 60 hz wall current. And they are extremely
accurate. I have never seen "quartz timed" clocks in any other capacity
than battery operated, where the DC battery current governs the cycles
of a vibrating quartz crystal. Willing to learn something new here, but
I've never heard of a plug in, 120V "quartz timed" electric clock . . ?

Tony

Michael,

the first Atomic Clocks was a Kit Kat Clock we used to during the cold war. They were part of an underground secret operation in Germany. Who would think that a Kitty Kat clock would have such time accuracy.

Code name: Operation Felix. File number: C999A999T999

Read your history!

Flip clocks are probably more related to shortwave then you may think.

Think about the time?

Before I pay something like $20 for a 255 uH coil I would want to see
some plots. The coil is supposed to be high Q but there is no number
mentioned. No specifications are mentioned at all except for the
physical dimensions.

Looks like it took some time to make it though.

ML,
.
Lets see, many predator animals do individual combat.
Other pack-type predator animals often work together
as a group and engage in group combat which would
be like tribal war between the groups.
Wolves = Hyenas = The Big Cats
.
Now it so happens that 90% of the Earth's Animal
Bio-Mass is insects. So what do we see when we
look at Insects : The majority do individual combat
to live and survive. But even in the Insect Kingdom
there are pack-type insects that do group combat
which would be like wars between nations.
Army Ants = Bees = Termites
.
It would therefore appear that Mankind Is Not Alone
in it's Individual Combative Nature and practicing the
Act of Group Warfare.
.
logically speaking that is ~ RHF

I am fascinated with the Grundig Majestic radios. Mainly the models that has the FM. It seem to make the radio more complete if you want a radio by your bed.

However, I had never had a grill cloth radio. I use to hate them when I would visit my grand parents as a child. But little did I know.

My appreciation for vintage radios grew with age.

I do not know much about the different Grundig Majestic models. But I am searching around for information more about them. I notice they seem to have speakers on the sides and in the front. If that's the case, then the sound will full the room.

I believe these are radios from the 50's. In fact maybe Grundig can make an anniversary majestic looking radio with TV and WX.

For a long time the R7 (non A) would sell for around $650-800 while the R7A would get close to $2000, regardless of the installed filters or NB.

I can't say that Ebay bidding goes in cycles but it does seem to go in fads. Kenwood R-1000s were selling for $150-200 until recently, then suddenly $300 became the minimum, and I still don't understand what triggered that.

The reverse is true for the RF-2200. They were going for over $300 a few years ago, now $150-200 will get one. It hasn't cycled back up, so I have to think that the higher prices were just a fad.

I also would gladly pay $2000 for an R7 than some of the prices for other radios lately, but only from a DXer who owned the rig. I can't see paying that money to someone who just found one and doesn't even understand what it'll do outside of reading what DXing.com has to say about it.

Perhaps that is the problem with the noise level. Active antennas will pick up all the garbage around your house and neighbor's houses along with radio signals.

I live a bit south of you in Fort Myers now, but a few years ago up in PA I used a T2FD with an Alpha Delta LT arrestor going into an okay (not great) ground rod, and the noise level was amazingly quiet.

This weekend I'm hoping to set up an EF-SWL with LT and ground rod, which should be an improvement over my quick wire-under-the-bed antenna that I use now.

You have an awesome receiver, and a good antenna system will really make it shine!

Well, for me, shortwave still makes my day. I live in a distant world.
So, I wanted something better off like ... sounding closer to FM
quality over SW. I believe DRM can do that.

What do you think? Do you know broadcasters airing DRM for Asia?

Well, if I found a non-DXer who was selling an R7 that would not stop
me from considering it's purchase. As long as it's in proper working
condition and has a fair price does it really matter what the seller
knows or doesn't know about the radio?

I like to park myself in front the R-8B when I can. At the top of the DX "wish list" is
Bhutan
(never heard) and Nepal (heard once when I was in Ontario).

I think his point was that a DXer would be more trustworthy as a seller, since a DXer would be more likely to know if the R7 was working properly.

Greg - More than once - Butt For 'your' Eyes ~ RHF
.
CADRE = noun.
SOURCE => http://www.yourdictionary.com/ahd/c/c0014700.html
.
A nucleus of trained personnel around which a larger organization can
be built and trained: a cadre of corporals who train recruits.
.
a. A tightly knit group of zealots who are active in advancing the
interests of a revolutionary party. b. A member of such a group.
.
A framework.
.
- -
- - -
.
Main Entry: cad·re
SOURCE =>
http://www.m-w.com/cgi-bin/dictionary?book=Dictionary&va=cadre
.
Pronunciation: 'ka-"drA, 'kä-, -drE; esp British 'kä-d&(r), 'kA-,
-dr&
Function : Noun
Etymology: French, from Italian quadro, from Latin quadrum square --
more at QUARREL
1 : FRAME, FRAMEWORK
2 : a nucleus or core group especially of trained personnel able to
assume control and to train others; broadly : a group of people having
some unifying relationship <a cadre of lawyers>
3 : a cell of indoctrinated leaders active in promoting the interests
of a revolutionary party
4 : a member of a cadre
-----[French, from Italian quadro, frame, from Latin quadrum, a square;
see kwetwer- in Indo-European roots.]

No, not quite. But if I said there were unconfirmed reports of you beating your wife, I'd bet that you'd realize that rumor doesn't equal fact. Facts have to be confirmed before saying an act happened.

Political Activity

Knight Ridder employees, as private individuals, are free to
contribute to and work for political parties, causes or candidates and
to participate in debate on issues of the day. But it is very
important to avoid situations that might raise a perception of bias in
the context of newspapers' or other news-gathering units'
responsibilities to report and comment upon such activities. This
sensitivity is most obvious, of course, in the case of news and
editorial employees and those with responsibility for those fundtions
within a newspaper or other news organization. More specific
guidelines to appropriate conduct may be helpful but are best left to
individual newspapers and news organizations, and all Knight Ridder
newspapers are urged to have written policies which complement this
Code.

Political contributions by corporations are regulated by state and
federal laws, and in some cases are prohibited. In no case may an
employee's personal contribution be represented as a Company
endorsement.

As a matter of policy (as well as law in many circumstances), neither
Knight Ridder nor its operating units make contributions to political
parties or candidates.

Financial support by Knight Ridder or any of its companies for ballot
issues--to adopt or amend laws and regulations-requires the approval
in advance of the Knight Ridder Board of Directors.

MZ - A Deadly History Lesson - RHF
.
The Swine Flu with as many actual Deaths as
Hitler, Stalin or Mao took decades to total all
occurring in a couple of years. And it is felt
that the Bird Flu could be such a Mega Killer.
.
The big problem back then was that the
Medical Treatment Systems of Every Nation
were over whelmed by the shear number of
Sick and Dying People who needed to be
"In-Bed" Sick and Dying and receiving some
level of Medical Treatment.
.
Todays demographics with a much older
Living Senior Population then in 1918 would
mean that a Swine Flu or Bird Flu Pandemic
could Kill Millions of the Elderly. That is one
dynamic that could change the face of the
Human Population for the Next Century and
beyond.
.

I put the active antenna up as a quick, temporary solution. I still have plans for a wire - probably the "inverted L". The active does give me reasonable performance on broadcast, utes, and hams. And it is excellent on medium wave. I'm thinking it might be a nice portable antenna for my DX-440 on those rare occasions when we vacation on the Gulf Beach, which we may skip this year due to the red tide.

I always thought a Pacific Coast location would have the advantage. Maybe
not. But it looks like R. Australia is a reliable enough signal so I should
be able to improve reception at my house with a better antenna.

There was one like that sometime back on eBay. Buy It Now for $350. I guess the seller didn't know what they had.

I missed it by mere seconds.

That may be what they're trying to prove, but so far they've not managed to say it. The original post suggested that the absence of evidence for the occurrence of an event was equivalent to the non-occurrence of the event. That, of course, is false. My position is that, if you're going to claim either that the event did *or did not* occur, then you should be prepared to back up your claim with evidence. Why is this controversial?

ILG is a database of shortwave broadcasts listing bearings and regions
the broadcast is aimed at by agreed upon criteria setup by an
international group The CIRAF regions defined on the map ar elisted on
the ILG database...In Florida I am in region 8 and anybody sending to
region 8-11 i oughta be able to receive esily. Ectually a proper antenna
and well chosen radio should receive virtually a hemisphere of CIRAF rgions.

http://www.ilgradio.com/ilgradio.htm

If you used SWLOG to control your receiver it would ID the received
station using ILG and ten other databases and allow you to "shoot for"
stations in selected CIRAF regions

There is no such thing as too many radios.

****

OK Peter, what number would you say, desktops or portables,
"is too many radios"?

i own 11 desktops. and, 16 portables. "I" feel, i have too many
portables. but, I also feel, you should own as many desktops as
you have room for. i have a Palstar R30CC on the way that i will
count as desktop number 12. i count my Lowe HF-150 as a desktop,
so i think i can count the Palstar as one too.

good DX.

I have no idea whether the alleged incident actually took place, but the fact that investigators are now unable to find witnesses does not show that it didn't happen. Maybe the investigators didn't look hard enough. Maybe it only happened once, in front of only a couple of witnesses. Assuming the event took place and there were witnesses, who knows where those witnesses might be now. By this time, they could be anywhere.

The only reason why there was an investigation, was because of a rumor. I
can say, hey I hear jd was shooting at a helicopter. Now by your
assumption, jd has to prove that he didn't. Why is the onus on jd, instead
of me?

How does one gather evidence for something that didn't happen? This is ludicrous to the extreme.

Why is one so willing to believe that something did happen, yet so unwilling to believe that the same thing didn't happen. Even evidence of firearms fired while in the presence of the rescue helicopters does not prove that such firearms were fired at same. Perhaps people irritated by being ignored by the rescue efforts were firing their firearms to attract attention.

Heard here at 2125. Very wide bandwidth - 5khz or more - very
garbled. Cannot be heard at all in USB, loud and clear in LSB and AM -
but very garbled. I cannot fine-tune the LSB clearly enough to "clean"
it (a first for me on this receiver)- possibly requires a filter I do
not have. Repeating what sounds like nautical information: reciting
numbers and "at xx knots".

Tony

Thanks to all that responded. I have not found the offending source for the noise as of yet, and I am considering the Timewave ANC-4.

My next step will be to kill the power in the house via the incoming main breaker, and power the Yaesu by battery or use a portable radio. Perhaps waiting for the neighborhood power to fail and trying the test again will be revealing.

Thanks all,

Dr. Artaud

As I said, there's no such thing as "too many radios."

I've got about 300 that I cycle in and out of use. Desktops, floor models, portables. I've even got three that will fit entirely in the ear. I was asked once, "how many can you listen to at one time?"

My response: "How many pair of shoes can you wear at once? You have two closets full of shoes. You have more in shoes than I have in three classic cars. Have you EVER heard me comment when you've gone shoe shopping?"

She never brought it up again.

Of course, I also bought her her own copy of World Radio and TV Handbook, and her own David Clark headset for listening. So, she learned to play with them and enjoy the listening.

She never commented when I bought a radio again.

I'd have hung on to her, except....well, she had a heart attack and died.

1603. SLINKY - Multi-Band "Off-Center" Vertical Dipole Antenna for Shortwave Listening

Newsgroup: rec.radio.shortwave
Date: 2005-10-10 00:13:35 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1128903215.892325.319080@g14g2000cwa.googlegroups.com>
Source record: 43915

So Like I Had This Idea and Wow !
.
What About a Multi-Band "Off-Center" Vertical Dipole Antenna
made from a Single (one) Slinky for Shortwave Listening ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5696
.
Building the Multi-Band "Off-Center" Vertical Dipole Antenna :
.
Get an Eight Foot Piece of PVC Pipe as your Vertical Antenna
Form and a Stabdard Size Slinky.
.
NOTE - The standard Full Size Slinky has about 100 Turns
with a Diameter of 2 3/4 Inches and a Circumference
of 8.64 Inches for a Total Wire Length of 72 Feet.
* Optimum "Stretched-Out" Length about 22.9 Feet
.
Drill Four (4) Holes through both sides of the PVC Pipe.
Hole # 1 - One an Inch from the Bottom
Hole # 2 - One 36 Inches from the Bottom
Hole # 3 - One 37 Inches from the Bottom
Hole # 4 - One an Inch from the Top
.
Take a Standard Size SLINKY and starting at one end count-off
36 turns and Cut the Slinky at this point. You now have two
pieces of Slinky one shorter piece with 36 Turns and the other longer
piece with about 64 Turns.
.
Take the piece of Slinky with the 36 Turns and place on
the piece of PVC Pipe (pipe going thru the 35 Turns of
the Slinky) and then thread one end thru Hole # 1 and
Bend that End to lock it in place.
.
Stetch-Out this 35 Turn piece of Slinky so that the other
end can be threaded thru Hole # 2 and Bend that End to
lock it in place.
.
Take the piece of Slinky with the 64 Turns and place on
the piece of PVC Pipe (pipe going thru the 64 Turns of
the Slinky) and then thread one end thru Hole # 4 and
Bend that End to lock it in place.
.
Stetch-Out this 64 Turn piece of Slinky so that the other
end can be threaded thru Hole # 3 and Bend that End to

lock it in place.
.
Now connect or Solder the Leads of a TV type 300 Ohm to
75 Ohm Matching Transformer to the Bent Ends of the Slinky
coming out of Holes # 2 and # 3.
.
Place an End-Cap on both ends of the PVC Pipe.
.
Mount the Multi-Band "Off-Center" Vertical Dipole Antenna :
InDoors in a Corner; OutSide Hanging from the Eaves; Mounted
to the Chimney; or setting on top of a piece of Top-Rail.
.
Connect a 75 Ohm Coax Cable (RG6 Quad-Shield) to the
Matching Transformer and down to your Radios.
.
ALT # 1 - Use a Longer-Wider piece of PVC Pipe :
Ten Foot (120 Inches) piece of PVC Pipe.
Drill Four (4) Holes through both sides of the PVC Pipe.
Hole # 1 - One an Inch from the Bottom
Hole # 2 - One 45 Inches from the Bottom
Hole # 3 - One 46 Inches from the Bottom
Hole # 4 - One an Inch from the Top
.
ALT # 2 - Use a Smaller-Shorter Size Slinky :
Slinky Jr. {Junior} which has about 85 Turns with a Diameter
of 1 7/8 Inches and a Circumference of 5.89 Inches for a
Total Wire Length of "41.7" Feet.
* Optimum "Stretched-Out" Length about 13.3 Feet
Therefore - The Bottom piece of Slinky Jr. would be 32 Turns
and the Top piece would be 53 Turns.
.
.
iane ~ RHF
.
All are WELCOME and "Invited to Join" the

No No Markie.....only against YOU. You need your attitude
adjustment......anyone disagree? Of course they don't. You see Markie you
are a piece of garbage that needs flushed.

Not just an opinion.....a pure and simple fact.

Of course, I also bought her her own copy of World Radio and TV
Handbook, and her own David Clark headset for listening. So, she learned
to play with them and enjoy the listening.

****

real slick. sorry you lost her. burried my second wife 13 years
ago. know what you mean. i spend time with a few women these days,
but no one interested in my hobbies. so, it works out. never did
like anyone telling me what needs done when i'm home- i know what
needs done and when i will do it. i only collect short wave radios.
they don't have to be rare, just unique. (sp)?
Good DX.

In the situation you describe, you're the only person asserting anything. Consequently, JD is under no obligation to prove anything. Now, he might deny your accusation, and in that event it's up to us to decide where the truth lies. But if it turns out that we're unable to find useful evidence one way or the other, that doesn't show that he did shoot at a helicopter and it doesn't show that he didn't. All it shows is that we don't know what happened.

which does not the change the fact you have called for Criminal
activity

that you advocate violence as a "solution" to those that don't conform
to your standards

> You need your attitude
> adjustment......anyone disagree?

now you go on to advocate mob action (or lynch mobs as theyd say in
your neck of the woods)

> Of course they don't.

Doesn't matter Now you are claiming that Minnoities don't have basic
rights

> You see Markie you
> are a piece of garbage that needs flushed.

Really? There are probably a lot of reasons why the liberal media would want to report that blacks were acting criminal.

Think about it.

I see that drunken idiot KT4TR hasn't returned.....LOL!

Yep the good old days were better entertainment than cable tv , movies,
dvd's or talk radio.

And all that eternal moron Lloyd Davies could do was listen.

The requirements have been dumbed down so a retard could pass, but
Lloyd still has that "mental" block!

Ya sure you betcha'

Yes, this is my point exactly. Someone not in the hobby selling flea
market finds will have no idea about what all of those buttons are for
on an R7 or most other communication receivers.

Well, I would agree. But there is a difference between a spouse TELLING you what you can or can't purchase and a spouse 'suggesting' (correctly I might add) that perhaps 6 or 7 Drake 2B's is enough! hi hi

A great idea... my original suggestion to you a few posts ago. ;-)

> Perhaps waiting for the neighborhood power to fail and trying the
> test again will be revealing.

Well, not too revealing and not very recommended. If the whole neighborhood goes out and the interference does go away, you won't have any idea if it was your house or one of your neighbors that was the problem...(not to mention that you may be waiting for a long time).

Good luck!

www.devilfinder.com Telefunken Grundig Majestic Radios

Where the site says,Antique Radios Photo Gallery :: European Radios

My Telefunken Opus 7 wooden cabinet AM/FM table model radio looks just like the one in that picture/photo.I believe Telefunken also built some Grundig radios too,because the two little paper manuals that are sitting inside of the Phonograph compartment of my Grundig (metal name plate on the front grill of the radio says Grundig) wooden cabinet floor model AM/FM/Shortwave/Phonograph (it's been a while since I looked at the manuals,but I believe it is also a Majestic and I have too much junk stacked around and on top of the radio now to get at the manuals) both manuals say Telefunken and not a word of Grundig.The Phonograph is built inside of the top of the radio,the wooden top raises up to allow access to the Phonograph.Your Assignment (should you be willing to accept the assignment) is to find me buku information about my Grundig/Telefunken/Telefunken/Grundig (whichever it is?) AM/FM/Shortwave/Phonograph wooden floor model Majestic Radio::::::: This tape will self destruct in thirty seconds.

Have you tried this and what's the performance like?

Unlike several folks who post on this group, I have no inclination to use a slinky - even if it's "just because I can." On the other hand, there are probably folks who wouldn't have tried as many 'wire concoctions as I've played with..........different strokes.

Guess you missed the excellent reporting from Mississippi on NBC and MSNBC, especially by Campbell Brown, and, most recently, Brian Williams. NPR had a report yesterday about hurricane victims trying to navigate the layers of bureaucracy in order to rebuild; and how the folks in Pearlington, Miss, are trying to rebuild their town. Good reporting.

How did you hear about the scope of damage from Hurricanes Katrina and Rita? Do you have some special, conservative news service? Just curious.

Greg

I looked around on the Internet, I notice that Grundig is not the only brand that made radios in this style. That is the say a table top radio with speakers in front and sides, piano buttons, am/sw/fm, gold trimmings, grill cloth and lots of station decals.

I would imagine that these radios were probably made more for the general public then for people who specialize in listening to shortwave. But that is cool too! Certainly this would be a better radio for listening to music anyway.

The other brand I found that made radios in this style is:

Saba.

I did a quick browse and found nothing in the mainstream news - of
course one has to ask "Would anything about Art Bell be found in
'mainstream' news?" Alas, the truth is out there.....

1645. Re: Highest Ever for a R7

Bottom line is the R7/R7A is probably among
the top 5 best receivers of all time -- the
passband tuning is just superior to anything
else I have ever owned.

The 2010 that went for $1,000+ was absurd....

I checked www.coasttocoastam.com Nothing was printed about this.

Sunday Nite 10/10/05 will be a reboardcast. I have not heard Art on the radio in a while.

I listen to Coast To Coast AM on WABC NY, I have not heard anything on the station.

1652. ebay prices for modded Radio shack DX-394

Newsgroup: rec.radio.shortwave
Date: 2005-10-10 04:46:44 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <UJCdnZEDc-ekb9TeRVn-gw@comcast.com>
Source record: 43962

there is a seller on ebay that sells a modified DX-394 about once a week for $280 or so. I can't understand how that price can be justified by the buyer compared some of the other radios available. $200 I can understand, but for a bit more than $280 one can get a used, tested and warranteed Satellit 800 for $319 plus shipping. no contest there. the 800 has killer performance, while the 394 is a just a nice overall radio. a 2010 can be bought for less ! like comparing a corolla to an avalon at about the same price, one is worth a lot less (the corolla).

someone tell me what appeals to the buyers to spend this kind of money ? I like the 394 and have a few myself, but I never pay more than about $100 or so for one. to me $280 is insanity.

Art has been dead for over ten years now.
I can not tell you how I have come to know this but suffice it to say,
what you may hear on ham radio is not the real Art nor is there any evidence
that demands a verdict that he lives.
I know its not want you want to hear but Art is no longer with us.
Yes his body is still here is perpetuating motion but it is just a shell.
The nut has gone home.
If I was to teach you how to cross over and commune with Art would you
listen? Could you get past the trimmings and trappings of this life to see
Arts life?
Here is the answer, The second mouse gets the cheese.
Best Regards, Dan

Speaking of the Quantum loops, I heard a few years ago that the company had stopped producing them, and that later they started production again. In the meantime, I also heard the contact information, such as email, phone numbers, address, etc. had changed.

Where does one go now to inquire about purchase of the Quantum loop?

By the way, don't say something like do a Google search. Had that been an optiohn with this gear, I would have already done that and not posted this question here.

Not true. He's alive and well.

This "miniature" urban legend pops
up every now and then, usually originating from the
dweebs and kooks who inhabit the alt.fan.art-bell
newsgroup. Timing of it usually occurs in October as a
Halloween prank.

The two broadcaster I can think of offhand are
Adventist World Radio and
Far East Broadcasting Company.

they have stations in the Phillipinrd. If you do a Google search I'm
sure they have schedules published. BTW they're both religion based
broadcasters.

No, I didn't say that. Try to read next time. I said :"If anything, a
liberal media would have squashed any type of thing involving blacks acting
criminal." Since they didn't, then your whole liberal media bias thing
doesn't fly.

apparently, you don't even trust your own eyes and/or you
> weren't paying attention and/or your info retaining capability is shot.
> The
> media were, by far, the biggest purveyors of racist rhetoric involved. For
> example, the media posted the photo of blacks as "looters" while the

Yup, that would make the blacks criminal, which wouldn't jibe with the
"liberal media" bias that you try to use.

> Wolf Blitzer even remarked that the survivors were
> "soooooo poor and soooooo black". At every step, the media portrayed the
> refugees as poor and black.

Predominantly they were.

I don'tr see what this has to do with the media. That's one persons
remarks. If you are saying the media ran his comments, well the meida also
ran Bush's press conference to the nation too.

But the only reason it is being talked about is based on an unsubstantiated
rumor. Without the rumor, what you said is still true, but no one would
have thought about it.

1680. (OT) Thousands of cars/vehicles

Paul Gallo on www.supertalkms.com 97.3 was talking about flooded vehicles.(and some folks was phoneing into Paul's radio talk show) Auction houses are buying those flooded Katrina vehicles and selling them to dealers and some of the flooded vehicles will be showing up all over America to dealers and chop shops.Be very aware of any new or used vehicle or vehicle parts (unless from a new car dealer's parts department or auto parts stores.I always buy any parts I need at NAPA auto parts stores) you might be interested in buying.You can check via the vehicle's VIN (Vehicle Identification Number) if the vehicle has been flooded or not.I think www.carfax.com has a link about that too.Or check with your State's motor vehicle department.

This may well be the case. *If* someone just started this as a rumor, then they behaved irresponsibly. I agree with you about that. I just don't know that this is how it all started, and it will probably be diffiicult for anyone to know this unless someone steps forward and says "Yes, I started that rumor because I was cranky that day, or in a big hurry, or was trying to cover my ass, or ....."

Good descriptions alone will double the price of ordinary radios on Ebay. I've sold Satellite 800s for close to $500 and 2010s for close to $400 on Ebay by taking the extra time to explain details and add a few factual selling points. Writing one liners like "Sony 2010 in good shape" won't bring top dollar. Neither will fuzzy pictures.

Also, the DX-394 has somewhat of a "cult" following and the mods are very desirable. Add this to the fact that the seller basically does this for a living and backs up his work and you've got the makings of a top dollar sale.

You gotta remember there's lots of folks out there with money to burn and $280 is merely pocket change.

The 394 is built better than the Grundig or the Sony.

yes of course, and she rased to tell Ladies that don't act like ladies
should not be treated as ladies

If a "lady" wants to come out and throws insults arround it is just
fine to throw insults back at her. Indeed Dee to here credit on this
point doesn't seem to have a problem with that

> Or are you just a product of someones
> imagination?

well a lot of what get posted about me is the product of various people
imgination, But I am real.

> I really can't believe you are this screwed up.

I am not responible for what you beleive or don't believe.

Nor do I have any obligation to live according to your statndards,
your aren't belief I must is yet another sign you don't respect the
constitution and laws of the US

> Are you for
> real Markie? If so...please do us all a favor.....pull the damn trigger.

what trigger? pointed at what

always resorting to the advocation of violence

Violence is is said to be the last resort of the limited mind. I don't
quite agree with that but the exception are not relavant to newgruop
discourse so here it work

Both Blaupunkt and Telefunken used to make this type of radios. I actually have one of each, in addition to a Grundig.

> My goal is to ride them all.<

Oh, I wish - I wish they were still rumbling down the tracks, each pump of the pistons pounding the ballast like thunder, sounding their lonely cries across the expanses...

To see one of these magnificent machines on a landlocked museum track is wonderful enough, but to experience the sight and sound as it rockets down a mainline at 80 mph is a life-changing experience. The latter is far too rare these days. Norfolk Southern has such a program in your general neck of the woods (?) up until about 10 years ago - then they put their big beauties back into museums. Now, only Union Pacific runs a big mainline steam program, and they have so much of the West wrapped up, and they're so anal about letting anyone else use their newly acquired lines, that it's hard for many other groups who possess the appropriate engines to run them they way they should. Damned UP.

Luckily, BNSF isn't so obnoxous, and some eastern roads are still willing to allow some private steamer use as long as they meet the hefty insurance requirements.

Just about every state has at least one coal or wood fired steamer.
Whether on main lines or on independent rails. I'm surrounded by them.
There are steam trains downstate, and throughout Wisconsin. Not long
runs. But it's a fun ride. A great afternoon.

I've ridden steamers in Texas, Arkansas, Kansas, too. Usually the crowds take some of the relaxation out of the moment, but my position has often gotten me the privilege of off hours runs, which are much more sparsely populated, if not private runs.

The next time I'm East, I'll have to take a look for mainline runners. That would be worth the cost of admission. Especially in the fall.

I've had a bunch of them. My latest is a Sony AM FM digital lcd
display clock radio that does not use a motor, shaded pole or any other
kind. I've got a 20 year old Unitron LED clock that keeps admirable
time as long as the power doesn't go out. It has plug that fits
nicely into the 110 volt socket.

And David's statement covered virtually every household clock made
today: "120 V plug in the wall clocks". That covers the $5.00 simple
LED clock sold at Wal Mart and the slightly more complex clock radio
combinations. They all use essentially the same clock technology.

wrong again but then you are almost always wrong

it is a violation of a persons civil rights to advocate violence
against them
Dan has sai plainly that I see that I lack any rights at all, let
alone the same as himself

both are plainly at varriance with the Constitution of the US

you being often guilty of them same thing though i can see where you
would likely be too blind to see that

not at all

but advocating violence against me or even against you "comander" is
violation of civl rights, and is in many places a criminal act

I even defend the rights of you and Stevie even Dan when he is right,
as vile as you are

I own a Sony multiband AM/FM/Shortwave model no.RF-2600 radio.I bought it brand new for about $160.00 at a local Jackson Service Merchandise store about 23 years ago.It still works,but the earphone jack (I never even used that earphone jack before or any of the other jacks on the radio either) needs tightened up,otherwise the radio won't even turn on.It works if I stick a little plastic wedge about the size of the tip of a flat wooden tooth pick between the jack and the plastic opening of the earphone jack of the plastic radio cabinet.I wonder if my radio would ever fetch a small fortune on ebay? Probally not.I can't find the carrying shoulder strap for the radio,that would probally knock off about ten points.

Plug in the wall clocks generally do not use a xtal oscillator. They
synchronize to the power lines.

You are such a weenie Markie. You have NO IDEA who your coming up against, not just me BTW. You are LUCKY we ALL consider you a little baby in a grown mans body. Or I assure you that your attitude would change on a one and one encounter.

The ONLY reason you are ACTING the tough guy, and I do mean ACTING, is you think you are out of reach. Well your not.

Take that any way you want wannabe tough guy. You don't worry me one little bit. You are nothing but a big mouth, morally corrupt child trying to act like a grown up in the real world. You are not even close. Stay home with your parents. If you ever come out and play you will get your arse kicked just for breathing.

Dan/W4NTI

I tend to agree with that. Before they start acting out on what they
"THINK" is real. Sort of Like Jeffery Dauber and the Son of Sam.

No Markie...just YOU. You can't even write a sentence that makes sense.
Thus you are impossible to argue with.....because...???.....That's right
Markie because you can't be understood.

But I'll keep trying...I like watching you jump up and down like a Mexican
jumping bean... No rime, no reason...just jumping.

> shows you do not adhere to pricinples of the US Consitituion, or to the
> rule of law
>
I fought for Constitution of this country. I fought for your RIGHT to show
your IGNORANCE on a daily basis.

What did you put your life on the line for Markey? Don't bother...I already
know.

> those deny right to other tendto lose them themselves
>

Boy are you out of touch...No surprise there, eh folks? Our so called
rights have been going away for a long time now.

But that's another subject which I dang sure don't want to get involved in
with you. Your already too confused about a simple thing as your toe being
on fire.

> you sound like a bigot and ahte monger a real asset to the ARS
>

And what have YOU done for Amateur Radio Markie? Just a short list please,
because we all know that is all you got.....Oh let me save you the trouble.

1. You passed the simplest test in Amateur Radio, The Technician NO CODE.

2. You refuse to learn Morse Code to upgrade.

3. You have decided to spend most of your time on this group blaming everyone for your inadequencies.

That about covers the basics.

Anyone notice how he keeps ranting about alleged threats of violence? My
opinion of him being a child needs modified.

He is a MAMA's BOY. A wimp, A loser, a drop out of life BEFORE he even
played the game.

Maybe we should leave him alone. He might slap himself with a fly swatter
or something.

Perhaps it would be better if you actually had read the Constitution. It is available on line.

Then go read the First ten Ammendments, usually refered to as the "Bill of Rights".

After that you can come back and ammend your statement of what you understand.

This could get interesting folks.

From: SeeingEyeDog <lookin@u.org>
Message-ID: <11klolljraf4104@corp.supernews.com>
Source record: 43895

Xinhua : the world's largest propaganda agency

http://www.rsf.org/article.php3?id_article=15172

With the help of a former French journalist on Xinhua, Reporters Without Borders exposes the distortion of facts, hatred for its enemies (particularly the United States and Japan) and its support, through the treatment of international news, for the world's worst regimes.

Despite a certain economic liberalization of the media sector, Xinhua remains the voice of the sole party. Hand-picked journalists, who are regularly indoctrinated, produce reports for the Chinese media that give the official point of view and others - classified "internal reference" for the country's leaders.

After being criticized for its lack of transparency, particularly during the SARS epidemic, Xinhua has for last few months been putting out news reports embarrassing to the government, but they are designed to fool the international community, since they are not published in Chinese.

Complete Xinhua Report http://www.rsf.org/IMG/pdf/Report_Xinhua_Eng.pdf

The RF-2600 (Panasonic) is a decent radio. I've got one, too.
Visually, it's much more interesting than its successor the
RF-2800/2900.

A fair number of 'em sold on eBay. I think they tend to sell in the
$150-200 range for a decent one.

Some of the old plug in the wall outlets clocks (and old electric motors and many other electric things,I like those old 110 volt open frame motors,I own a few of them.I own a lot of old electric things that say 110 volts on them) say 110 volts on them.They run just as good on 120 volts too.When those clectric clock motors get old,they start making a humming noise.

A lady across the street from me owns a very nice wooden cabinet floor model AM/FM/Phonograph Radio.The Phonograph is built right next to the radio's dial and control knobs and there are two wooden doors on the front of the radio that open outward to allow access to the radio and phonograph.A very,very nice looking unit,although the radio does need some work on it,it emits a loud humming noise.I think the Radio/Phonograph unit dates back to the middle or late 1940's,it looks great over their in their living room,some of the best looking cabinetry work I have ever seen.She said a lady at work gave her the Radio/Phonograph.

I remember back in the day, I used to pursue those QSL cards quite a bit. I suspect I got myself on some mailing lists here and there. Radio Beijing/China Radio Int'l used to send me some Messenger publication. But what was more memorable was one day when this unexpected package came in the mail that I had to go down and sign for at the post office. It was from Bulgaria. I guess this was in 1990 or so. Well, it was filled mainly with these black and white 6-8 page English language newspapers (I believe it was labeled Sofia News or the like). Then there was some color magazine with all of these pictures of beach resorts in Bulgaria and some cartoon renderings of Todor Zhivkov (Bulgaria's Chairman of State Council, 1971-1989) and in the back of the magazine, there was this "art" photo of an attractive, nude woman on a beach. Plenty of interesting reading, too, since this was a period of political transformation in Bulgaria and since back then we didn't have a multitude of int'l news sources available as we do now online.

I was in high school in those days. Getting all this stuff in the mail from Bulgaria was pretty darn neat. Insofar as these state shortwave stations broadcast to overseas audiences in order to create goodwill and such, I would say that Radio Sofia was pretty successful in this regard where I was concerned. In the post-Communist era, while Bulgaria has received far less media attention than, say Poland or the Czech Republic, my best wishes have throughout remained with Bulgaria. Indeed, it'd be nice to one day pay a visit to that neck of the woods, if the opportunity ever arises.

I said Swine Flu, not Spanish Flu.

That was in the late 1970's, not in 1918.

An epidemic among the farm animals in the Caribbean. An influenza that is transmissible to humans. A panic program of immunization ordered by Jimmy Carter. (Who seem to be the president that George W. Bush seems to imitating the most in his recent actions). Some sort of reactions to the vaccine, and (as I vaguely remember) people suing the government for damages, or something like that.

Buy a ripped ceramic magnet speaker at the thrift store. Smash it to
bits with a hammer. The bits that are growing whiskers are your
magnets.

Well, no, I'm not easily impressed. But I do know good reporting when I see it. NBC reporters had made 11 trips to Mississippi before Brian Williams returned last week at the request of Mississippians who still felt left out. Campbell Brown was in the Convention Center on the Tuesday after Hurricane Katrina - two full days before Mike Brown (no relation, I'm sure!) learned about the people abandoned there. I don't know who could have covered the story - the whole story - more than the networks, including Fox.

> hearing first-hand from those actually in the area.
>
Well, that's as it should be. I just don't see the evil in the "liberal media" that conservatives always bring up. My beef with broadcast news, both national & local, it's that it can get superficial and emphasize form over substance. But that's TV. On the whole I think they get it right. What I hear on conservative talk radio (granted - commentary, not news) is slanted, twisted, spun, agenda-driven invective, and the never-ending rant against the lying liberal media.

You can wrap some thin diameter copper wire around a nail or a thin flat iron bar and connect both ends of the wire to a six volt or 12 volt lantern battery and make a magnet that way.Your local library should have some juinor science books that explains all about it.

If you ever do get to a chance to visit Bulgaria, do! I spent 1995 and part of 1996 there, in a small town called Blagoevgrad, which is about 60 miles south of Sofia. Some of the people there were suspicious of me because I'm American, but most weren't and I was treated extremely well by the people there. Really extraordinary hospitality.

For example: I had the bad luck of getting very sick while I was there, so sick that I had to be hospitalized for an extended period. I caught hepatitis A, which is rampant in that part of the world, and I was in a wing of a hospital that was devoted entirely to hepatitis patients. My fellow patients had families who'd bring them fruit and other things that are good for people recovering from this illness. I was basically stuck there. No one visited me and it was pretty depressing. However, the families of my fellow patients must have felt sorry for me, as soon they were bringing me the same sorts of 'care packages' they were bringing their own friends and relatives. This really bowled me over because these people were not well off--at all. It was some sacrifice for them to bring fruit and assorted other little treats for me, an American guy they knew nothing about, and who couldn't even carry on a conversation with them (I never managed a real mastery of the language). I have never forgotten their kindness and I never will.

Those are wonderful radios with a mellow full sound that is unmatched
by anythong available today. Chances are the radio will need a general
overhaul if the radio has gone unused for a long time. Be sure to
check that the FM coverage matches that used in your country. Also be
aware that some of those radios use 220 volts.

Are we now talking about wall clocks, ot are we back to clocks that
plug into the wall. Analog clocks with a synchronous motor (either
wall of desk) won't use a crystal for synching, that is true.

From the linked article:

''Here is a quick overview of the components of a digital clock at a
high level.
At the heart of the clock there is a piece that can generate an
accurate 60-hertz (Hz, oscillations per second) signal. There are two
ways to generate this signal:

The signal can be extracted from the 60-Hz oscillations in a normal
power line. Many clocks that get their power from a wall socket use
this technique because it is cheap and easy. The 60-Hz signal on the
power line is reasonably accurate for this purpose.

The signal can be generated using a crystal oscillator. Obviously, any
battery-operated clock or wristwatch will use this technique instead.
It takes more parts, but is generally much more accurate.''

The last phrase is incorrect. Power companies make sure their long
term frequency average is exactly 60 Hertz for the very purpose of
keeping clocks accurate.

Theirs got to be a way by using 2 other magnets. I am using my magnet mount antennas and playing around with scap metal!

The only batteries I ave are AA, AAA and 9v.

The extremes we go through. And my girl friend thinks I'm crazy! Oh boy!

Iron doesn't make a very long lasting magnet.

www.devilfinder.com Front Page News Index Articles Clarion Ledger
October 10 2005

I don't spend much time watching those U.S.Mininstry Of Propaganda talking heads (so-called news) on the tv so-called news channels.(Fox tv news is slanted too Most of the time,several days go by before I even think to click on any of those U.S.Ministry Of Propaganda so-called tv news shows.What's on tv right now that I am watching? Dangerous,(1935 Bette Davis,Franchot Tone,Margaret Lindsay movie) next up,Slightly Dangerous,1943 Lana Turner,Robert Young,Walter Brennan) next up,1953 Dangerous When Wet,Esther Williams,Fernando Lamas) next up,Dangerously They Live,(1941 John Garfield,Nancy Coleman,Raymond Massey) I might stay awake tonight and watch all of that movie,but at about 12:00 AM,I have to get my beauty sleep as usual.I don't stay awake to listen to those Kooks,Art Bell and George Noory.I get real news and I watch real tv.I am only sixty three years young and I am a growing boy and I need my eight hours of sleep every night.

They have a plastic injection molded case,don't they? Plastic is easily molded to look like anything you want it to look like if you have the dies.So is sand molding poured concrete forms.That much money for a plastic cabinet radio? Well,I am glad somebody is buying it.Glad I am not buying it too.Take the guts out of the cabinet and with some RTV,you can make another cabinet just like that one.

Did he say they were racists or did your little brain filter it to say that?

Limbaugh has said worse. However, by now Limbaugh has been pretty much been
expected to say stupid things so no one takes him seriously.

I have some books here about antique clocks and wristwatches and pocketwatches.A couple of articles in one of the books is about a perpetual clock.The clock has a hermetically sealed chamber and the difference in air pressure keeps the clock's spring wound up.The clock never needs winding.It is a very nice looking old antique clock too.

Crazy girls.Them two gals that moved in next door to me a couple of weeks ago,one of them is 37 years old and works at Bell South,the other one is 30 years old and works at a Kroger food store.They disapeared at about 7:30 PM last night.The older gal showed up next door at about 1:30 PM this afternoon with her Bell South uniform on.She was over there for a few minutes.I told her I was fixin to put out an APB on y'all.She still haden't got all of the new plastic water pipes installed in that house yet and I have been helping her with that.She said she and the other gal went over to Louise's (whoever Louise is,I don't know) house last night to soak in a hot tub and for a good hot meal.I was next door about a couple of hours ago talking to them and I found out from the 30 year old gal they went out for some "R&R".I told them I did my R&R in Hong Kong in 1964.

Possibly you could elaborate...

I seem to recall that, per the generally accepted way *overall* medical performance is measured in many categories, we are about 17th or 18th in the world. (Please don't just single out one or two diseases--address *all* categories and tell me where/why you believe the survey is wrong). Also, a few weeks ago it was announced that for the *5th* year in a row, our infant mortality has gotten worse, rivaling (or worse than) some Third World countries.

-=jd=- wrote:

> "Best in the World" and "Universal/Free" are mutually exclusive.

Agreed...so just address the comment above.

Please do. You may even find the beach where that nude pic was taken ;)
BTW, the English Service of Radio Bulgaria is still around, you can find
out more about them here: http://www.bnr.bg/RadioBulgaria/Emission_English/
I'm pretty sure that if you write them, they'll find some more cool
stuff to send you.
Anyway, after all these years, it's certainly nice to read a few good
words about what I used to do for a living back then.
Thanks.
Svilen
(former translator, anchor and head of the English desk of Radio Bulgaria)

That's VERY easy to do (..pay for a damm Sony what one
would pay for a Drake) when most of every bid in the last
days was likely a shill that the Dealer/Seller was in cohorts
with. Anyone who would pay two grand for a 20+ year
old Sony radio needs to have their head examined.

I bought one of these same radios in 1991 at an estate
sale auction for $120.00, but if some fool is willing to part with
that much cash for one, then I may put it up on 'E-Sucka'
too !

FO&A,
.
The 'old' AC Power Wall Clocks and Table {Desk} Alarm Clocks
that synchronized to the 60 cycle AC Power generally gave good
long service that was Accurate to the Minute. All I ever had
to do was just listen for the AM Radio Station's Hourly
Top-of-the-Hours Tone and set the Clocks twice a year for
Day-Light-Savings-Time in the Spring {Ahead} and Standard-Time
in the Fall {Back}.
.
The only problem with these 'old' Clocks was when the Power
went out in the Middle-of-the-Night and you did not know it.
It was a Daily "Good Habit" to Listen to the Radio and Hear
the Top-of-the-Hours Tone and then take a look at the Clock
to see if it was still On-Time-to-the-Minute.
.
ah those were the days ! ~ RHF

You're both wrong; shame on you. It's the Declaration of Independence, and it's predicated on the belief that government serves only to secure the rights that we're all born with.

To whit:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just Powers from the consent of the governed, -- "

Of course, that document was written by slaveholders...so much for -that-, eh?

no it wasn't but slaveholders were included in the Contienal Congress
It was written a by a Slave holder who did include an anti slavery
clause, stricken at the last minute at the insistance of Mr Rutlegde of
SC

Yodar,
.
The clear advantage of the North County Active Antenna "Kit"
for the Do-It-Yourself'er is everything is there small parts
wise and 'you' don't have to scrounge for all those parts.
http://www.northcountryradio.com/Kitpages/actant.htm
.
ABOUT - The North County Active Antenna "Kit"
- Info and more . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5716
.
NOTE - Kit includes all Electrical Components for the
Pre-Amp and DC Blocking Unit.
- - - NOT Included : Cable, Wall Transformer and
PVC Pipe (purchase these items locally as required).
.
North County Active Antenna "Kit" Reading List :
http://www.northcountryradio.com/Articles/actant2.htm
http://www.northcountryradio.com/Articles/vlfmod.htm
http://www.northcountryradio.com/Published/actant_0896/page1.htm
http://www.northcountryradio.com/Published/actant_0896/page2.htm
http://www.northcountryradio.com/Published/actant_0896/page3.htm
http://www.northcountryradio.com/Published/actant_0896/page4.htm
http://www.northcountryradio.com/Published/actant_0896/page5.htm
http://www.northcountryradio.com/Published/actant_0896/page6.htm
http://www.northcountryradio.com/Published/actant_0896/page7.htm
.
RECOMMENDED - Pick-Up-Wire Length is 16 to 24 Inches for the
Wire Antenna Element; with as little as 12 Inches in Urban
Areas with high power Transmitters nearby and as much as
48 Inches in 'remote' Rural Areas that are far away from
any Radio Stations.
.
FWIW - The simple piece of Wire (Pick-Up-Wire) used for the
Active Antenna Element could be replaced with a piece of
Litz Wire Or Flex-Weave Antenna Wire of the same Length.
* Litz Wire made of 175 strands of #46 AWG Litz Wire
http://cgi.ebay.com/_W0QQitemZ5816603815
* FlexWeave Antenna Wire 168 Strands of #36 AWG Copper Wire
http://www.radiobooks.com/products/fw.htm
http://www.universal-radio.com/catalog/cable/4608.html
http://www.davisrf.com/ham1/flexweve.htm
- - - Or replace the Pick-Up-Wire and Upper piece of PVC Pipe
with a piece of Copper Pipe of the same Length and Diameter.

(Use a short 'jumper' wire soldered to the inside bottom of
the Copper Pipe.
.
Question # 1
Can I "Slinky-fy" the North County Active Antenna ?
.
Question # 2
Could I replace the Pick-Up-Wire with a Loop Antenna Element ?
- - - Any Comments on just "How To Do It ?" Convert the
North County Active Antenna to a Loop Element ? ? ?
.

Follow-Up Notation :

300 Ohm TV type Twin Lead placed inside a Hula Hoop
that is being used as a Loop Antenna Form.

The two parallel Wires are bend into a Circle but do
not form a direct electrical connection end-to-end.

One End of One of the Twin Lead Wires is connected to
the Antenna "Pick-Up" Terminal of the Active Antenna
and the other end of this Wire is dead-ended.

The Opposing End of the Other of the Twin Lead Wires is
connected to the Antenna Ground Terminal of the Active
Antenna and the other end of this Wire is dead-ended.

imagine that ~ RHF

W/O proper equipment, you are wasting your time...instead go to the
Magnet Man at

www.engconcepts.net

he sells a large assortment of magnets for hobby, school science or commercial,
made from neodymium-iron-boron, which is one of the strongest magnetic
materials around.

Their small pin magnets are excellent for metal boards or refrigerators.
You won't believe how how strong they are for holding paper and things!

I have one of his larger magnets that is superb for one pass degaussing
of magnetic tape!

Try Magnet Man. You will like the products and it's very unlikely you would
be able to reproduce his magnets w/o professional gear!
Bye,
Ed (W3dlz)

1815. 'low cost' "Ceramic Magnets" -vice- How do I make a magnet?

Newsgroup: rec.radio.shortwave
Date: 2005-10-11 08:58:06 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129021086.194509.322790@g49g2000cwa.googlegroups.com>
Source record: 44124

SR,

Why not simply buy and use 'low cost' "Ceramic Magnets" from where else

. . . RadioShack ! = = = CERAMIC MAGNETS => http://tinyurl.com/8r9tl

I like these two the best for many uses :

* 1" Rectangle Ceramic Magnets (Qty : 5)
RadioShack Catalog # 64-1879
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=64-1879

TIP - Great for Creating your very own Refrigerator Magnets

* 1-1/8" Round Ceramic Magnets (Qty : 5)
RadioShack Catalog # 64-1888
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=64-1888

TIP - These Round "Donut" ones work well on the DC (Dual + & - Wire)
Output side of AC-to-DC Adapters to reduce that last bit of AC/RFI
coming down the DC Line. Place them about 4"-8" from the DC Plug-End.

Bend the Wire over and thread it thru the 3/8" Hole and then over and
around the diameter of the magnet and tape it in place.

FWIW - If you have an AC Power Line going to the AC-to-DC Adapter
then place one of those Snap-Together Ferrite Choke Cores on the
AC Input Line about 4"-8" from the AC Plug-End.
* Snap-Together (Clamp-On / Snap-On) Ferrite Choke Core for RFI/EMF
RadioShack Catalog # 273-105
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=273-105

That last part is bollocks. Cancer treatment here in Australia is just as good as yours and is very close to free. OK, not totally free, today cost $20. Our oncologists also travel to the rest of the world (including USA) and teach your oncologists new tricks.

Brad.

Free? Ain't nothing free. You simply pay for it in some other fashion.

I don't think there is anything in the US Constitution that states that anyone is entitled to anything for free, though many wish to interpret it in that manner.

And still you'd complain because you wouldn't like what news stories they'd present.

And then you'd complain about the factual statistics.

I hope news wasn't all about just cold facts. CBS news started a series of reports tonight following new enlistees to the Marines, tomorrow they interview their families, and they will follow that by others and their views of the war. Should people's opinions be banned from the news since they aren't about cold hard facts?

Now, if you want to

How do you degauss tape with a stationary magnet?

Degaussing requireds an alternating field that gradually diminishes.

David,

Did it have the Analog Tuning Scale
with a Digital Frequency Display ?

Plus the general look and lay-out of the
Panasonic RF-2800/2900/2600 Radios ?

~ RHF

"J" - Actually the Panasonic RF-2800 Radio came first
and was followed by the impoved RF2900 Radio. Then
they were replaced by the newer RF-2600 Radio. ~ RHF

Wrong, stupid Marky, Thomas Jefferson, one of the principal authors of
the Declaration of Independence, WAS a slave-owner. As were many
others. It wasn't just written by one person, either, Marky. Rutledge
needed the clause to be stricken for economic reasons. The agrarian
economy at the time in the South depended upon slaves as a workforce.

I own a lot of old Sony radios of various years and various sizes.Some
of them date back to the early 1960's and they all still work too.I
owned a Sony radio I bought at the Base Exchange store when I was at
Scott Air Force Base,Illinois and SL-60 near Pacific,Missouri in
1963.The little radio was mostly round in shape and it had a little sort
of a clothlike carrying case.I never paid any attention to the model
no.,but I would like to find a picture of that radio on the
internet.Sony makes great products.

I own two old large very powerfull magnets I bought at a scrap metal yard about thirty years ago.One of them is round,about seven inches by about four inches diameter and the other one is a raggity broken piece of a larger magnet.Both magnets are stuck to the angle iron frame stand I built for my 1960 Mercedes Benz Diesel Engine I bought from J.C.Whitney Company back around 1969.If I drop a little bolt,nut,washer,cotter pin or something in the grass and I need to find it,I reach for one of those magnets and it finds it every time.

You are the one that said to this statement:
> Of course, that document was written by slaveholders...so much for -that-,
> eh?

You replied:

"no it wasn't but slaveholders were included in the Contienal Congress
It was written a by a Slave holder who did include an anti slavery
clause, stricken at the last minute at the insistance of Mr Rutlegde of

SC"

YOU are the one who said the document wasn't written by slaveholders,
when anybody with a modicum of education knows differently, Marky.

You are the one in desperate need of learning English, child abuser.

> > As were many
> > others. It wasn't just written by one person, either, Marky.
>
> the other authors (whose roles were minor) Adams, Franklin, Livingston,

anyone one with a real education knows that it was written by A slave
Holder, not by a group of them, but I guess that lets you out

>

> that... Adams and Franklin were not minor roleplayers, either, stupid.

Minor in American indenpendance no in the writing of the document yes,
at Adams is a minor player in that drama according to Adams, Franklin
according to Adams and Jefferson, one the few things Adamas and
jefferson agred on in later year

and none of the other persona mention (Adams, Franklin, Livingston,
and Sherman) were slave holders at all

therefore again the document was not written by slaveholders in the
pural

shocking the lack of education displayed

Seems to me I remember a few years ago Art Bell was talking about some bad back problems he has/had.He is also a Ham Radio Operator,I don't know if he also has a daily radio talk show or not,AM or FM,whatever,but sitting up in a chair for hours on end every day must be pretty rough on his back.If he is doing OK financially (and I hope he is) and if he wants to be the host on www.coasttocoastam.com one or two nights a week,then I say that is fine and dandy.Lets not forget,he once loaned Roger Fredinburg some radio equipment free of charge so Roger could get back on the air with his www.regularguy.com radio talk show.Roger Fredinburg once told me so in one of his emails to me a few years ago.George Noory is doing a great job at coasttocoastam.com too.

You dont seem to get it Markie.....Im not saying you have no rights because
the Constitution says so (you claim). Actually it is the Bill of Rights. I
object to you being equal in that you "claim" to be a man.

Based on you actions here I despute you are indeed a man.

Source record: 44075

My beloved DX-390 crapped out last night. I was listening to it and
it just quit. All I get is a soft static over all bands and a soft
clicking sound when I tune.
I've had this radio for years and I liked it. I know it isn't the
best but it was a good radio.

I thought I remembered reading here once about a front end problem
with this radio? I tried to google it but didn't come up with
anything.

I still have my Deagen 1103 which is a better radio, I think but I
want to replace the 390.

I googled this group for best radios and came up with lots of opinions
but these seen to stand out:

AOR 7030

Drake SW8
Drake R8A

Grundig/Eton SAT800
Grundig YB 400P

JRC NRD-535D
JRC NRD-525

Panasonic RF-2200
Panasonic RF2600

Sangean ATS-909
Sangean ATS-818 or ATS-803

Sony ICF-2010
Sony 7600G and GR
Sony SW77
SONY CRF 5090
Sony ICF-6800WA
Sony ICF-SW07

HF-1000

Of the above list, which one(s) do you think are better?
I want battery operation, good sensitivity and selectivity,
SSB, knob tuning, portability, digital display ans good ergonomics.
Price range below 500.00 US.

Thanks,

There's no way your standard couldever be met. Every little thing that is a
fact can still be turend into something political. It's a fact that those
people predominantly in NO were black and poor. It's a fact. But you
complain about that. You would complain like a "drama queen" about
everything if it didn't suit your perfect political bent.

>
>> CBS news started a series

>>
>
> No, they should be presented as an opinion piece and not "News" items.

Actually, it's not an opinion piece. The editior is not injecting an
opinion, but reporting what the Marine recruits were thinking as they were
in boot camp and probably going off to war. The kids were saying how
they're doing it because of 9/11 and for their country. Oh my God, are they
"drama queens" now?

It
> may be a fact that they have an opinion, but because they hold an opinion

If you can get an SW8 for under $500, that's the one I'd look at
first. The ATS-803A is a good cheapie.

Making Honest Judgments About Bird Flu. www.nomorefakenews.com
My Honest Judgment is there isn't that much to worry about.Also,
www.devilfinder.com Dr.Sherri Tenpenny Avian Bird Flu
www.devilfinder.com Len Horowitz Bird Flu
And I think Dr.Joyce Riley might have something to say about Bird Flu
too.
You live in the Atlanta area,don't you,jd? Phone the cdc and ask them
what they say about the so-called Avian Bird Flu pandemic and report
back to us.See if you can get that big shot Thompson guy at cdc on your
phone.He is married to Marsha Thompson.She is originaly from right here
in Jackson.I would like to know what he says about Avian Bird
Flu.(Marsha probally knows more than he does) PS,I am not trying to get
a big argument going about Avian Bird Flu,I just happen to believe it
really isn't that much to worry about.And don't forget,Follow The
Money.Who owns stock in the companies that make them vaccines.Not me,I
don't own any stock in anything at all.

Hi gang, I don't understand how to tune this radio. It's a bit confusing.

Lets say I want to turn in WBCQ 7.415.

I would first select the 4-7.85 Tuning Range MCS button.

Then tune the Main Tuning knob to 7.4. Move the knob around that area until I find the station.

Now their is a Band Spread knob, I suppose I would turn that the the closes area to 7.4. However, is it that I am suppose to turn both knobs at the same time?

Also their the Band Spread knob does not go up to 7.415. How do I make up for this.

MS,

1. If you liked the RadioShack DX-390 that much :
Then 'why not' buy another on eBay for about $40 - $60 ?
SOLD => http://tinyurl.com/d78yy

RadioShack DX-390 Radios on eBay
FOR SALE => http://tinyurl.com/chepq

2. For an everyday stay-in-one-place AM/FM and Shortwave Program
Listening Radio the Grundig Satellit 800 is a good radio to simply
listen to and enjoy.

Grundig Satellit 800 Radios on eBay for about $325 - $375
SOLD => http://tinyurl.com/8xc28

Grundig Satellit 800 Radios on eBay
FOR SALE => http://tinyurl.com/8hmpm

3. The Kenwood R-5000 is a good General Coverage Receiver
"Table-Top" that usually goes for less that $500 on eBay.
SOLD => http://tinyurl.com/cee3j

Kenwood R-5000 Receivers on eBay
FOR SALE => http://tinyurl.com/dlz28

hope this helps ~ RHF

> doesn't change the law

Double BS,, cite me "one" case where someone "threatened'
to do something and got charged. The legal system hasnt gone to
hell,,,, there never has been a law against making threats. I could threaten
people all day long and I "might" get a visit by the cops asking me what
my problem is, but thats about all thats going to happen. You are getting
confused with people who may raise a fist or other object and threatening
to hit them, that, technically is assault. But just making a statement of
threat dont mean squat and never has.

You're right... chances are a FET has blown. Very common with 80's and 90's Radio Shack / Sangean models and fairly easy / cheap to repair. Look up old Google newsgroup posts regarding the DX440 and ATS-803A and FET problems. You'll find tons of info. Same exact principles will apply in fixing your DX-390.

Take the batteries out of the radio,push all of the buttons at least twice and operate any other kinds of switches at least twice.Let the radio sit overnight without putting the batteries back in the radio.In the morning,put the batteries back in the radio and see if the radio works ok.It's worth a try.

Well, a story can have fifteen different sides to it. In a half hour
prigram, you'd get halfway through one.

-- not one aspect of the whole story
> edited, often out of context, to promote a particular point of view.

Like the President did with the war in Iraq.

On the
> other hand, *You* either equate the whole story with "waving the flag, and
> singing patriotic hymns" -OR- are you showing us another of your
> unfounded,
> drama-queen, lie-beral exaggerations. Which is it this time, hmmm?...

Just remember, if the media asks questions about the war, they are being un-patriotic, and hurting the moral of US soldiers, giving aid to the enemy and therfore are causing us to lose the war. So the media should never ask questions about the war. They should just report what a great job we are doing over there.

Let's just hand the keys of journalism over to the government. Oh wait, we have. News-style programs, funded by the govt., to promote the governments agenda under the guise of a real, independent news report.

>
>
>>>>
>>>> And then you'd complain about the factual statistics.
>>>>
>>>
>>> "Factual Statistics" is an oxymoron.

> You haven't established any statistical result as being factual.

LOL. Statistics are based on facts. So by stating a statistic, you are stating a fact.

> But if you
> want to play with semantics, then statistically speaking, you and your
> lie-
> beral buddies were soundly rejected at the polls in the past elections and
> your point of view has been statistically rendered invalid.

And statistically speaking, Bush got less votes than Gore in the first election. Therefore, more people wanted Gore as President than Bush. Now I know how much you all hate Gore, but you couldn't even pull a majority over him.

> So are you
> asserting that all statistics represent the true facts of a given issue
> without bias?

No, and that's the point. You want only facts. Statistics are facts. So if a news program reports a statistic as a fact which is what you want from

them, facts, then you'll still bitch and moan because now the facts have
bias. But you wanted facts. You'll never be happy jd.

Is this what you are asserting? There are bonus points if you
> answer without "dodging" like you normally do.

jd, you are too stupid to understand what I write when I address your
points, so you think I'm "dodging" them.

>
>
>>>> I hope news wasn't all about just cold facts.

> because it's one of the core principals of your far-left, lie-beral
> political template: Everything is political to you. An apolitical
> presentation is a completely foreign concept to you.

Here's a simple question. What news program have you seen that is closest
to an apolitical presentation and why?

>
>
>> It's a fact
>> that those people predominantly in NO were black and poor. It's a fact.
>
> It's a fact that they require oxygen to remain alive. It's a fact. So what
> if they were poor and black? Does that mean that you and your lie-beral
> buddies have to politicize that fact?

Maybe because that teaches the casual listener to what the area is like.
When you heard about the earthquake in Pakistan, didn't you want to know
more about the region and the people that were affected? When we went to
war in Iraq, didn't you want to know more about the people there? Or are
you the kind that is like God and doesn't see race, gender or class?

I didn't know much about NO, other than the much publicized Mardi Gras and
it's history of Jazz. I didn't know how poor the region was. I didn't know
the racial mix. Why do you want news to be about hiding facts?

>
>> But you complain about that.
>

Like when Limbaugh counted the number of days when Clinton was President as the country under hostage, much like the days when Americans were held captive in Iran? When Limbaugh cried his pants off over everything that Clinton and Hillary did? How they were single handedly destroying the country? Yeah jd, I can see how only liberals exaggerate.

I won't even start about Anne Coulter.

SR:
To cruise the 41 and 40 meter band on the Hammarlund, set the main tuning dial to 7.4 MHz then set the bandspread to 7.4 (it should have been on the 100 dial indicator position on the lower logging scale) if that is the band you wish to listen to. Now leave the main tuning knob ALONE and tune down from 7.4 to about 6.98 (I'm looking at my HQ-150 but the dails are probably pretty close) using just the bandspread knob.

As far as 7.415 is concerned, that's just a little higher than 7.4 on the bandspread dial so it should come in just above it.

When tuning with the main tuning knob, ALWAYS set the band spread to 100 on the lower range scale. The main dial is not calibrated if the band spread is at any other position.

Remember that the bandspreads chosen by Hammarlund were for the Ham bands, not the broadcast bands.

How about using an old (with or with the tire,the wire in the tire might improve reception) wire spoke bicycle wheel for an antenna? Old bicycle wheels are cheap and plentifull at the scrap metal yards.And if it doesn't work,you can always make a unicycle out of the wheel and impress the kids on your block.

As I recall, that Sony 'invention' (the one gun color tube) was invented (patented?) in the 1920s by Earnest Lawrence of Lawrence Livermore Labs fame, the same guy who invented the cyclotron. No one was interested at the time. Sony dug the paper up years later and it became the Trinitron.

Hi: Well the one thing nice about the Hammarlund 180 & the Hallicrafters SX-100 is that it is more complete. I like a shortwave receiver to have the ham bands plus the broadcast bands. Having medium wave is good too.

My Icom R75 gives me all of that. But I have a love for tubes & boatanchors.

One thing I can not seem to understand is longwave. Where it begins & ends. In fact mediumwave (where we get local broadcast radio) is below 1700 khz, why do they called it mediumwave?

Then, why is shortwave called shortwave anyway? My guess is that when radio was first invented, it was in the shortwave range.

Thanks, SR

No, but I'll make a guess.

In the old days, it was common to have a "crystal calibrator" built in to shortwave receivers, or as an external accessory. It was crystal controlled and had a nice even frequency, commonly 100KHz, and it had good harmonic content. So you'd turn it on and every 100KHz there'd be a signal. Pick a known frequency (such as WWV) and then you by counting the markers either way you can be sure of frequency within 100KHz. Doesn't seem like a big deal now, but in the days of analog receivers where even the MHz marks weren't always right on, it was pretty helpful. When digital logic ICs came along, some would even divide the signal down so they'd get closer markers, again you'd count them from a known point, for a closer reading of frequency.

(Of course, one could go in the other direction and start with a 1MHz or 10MHz crystal, which weren't useful for getting close to a frequency, but it was easier to count every 1MHz to start with, and again when digital logic became available it was easy to start with a 10MHz crystal, divide by ten to get 1MHz, and divide that by ten again to get 100KHz.)

I would think that's what you have, but since I don't know the radio I can't be certain.

Other techniques would be if you had a favorite frequency that you regularly tuned to, you'd have a crystal ground for that frequency and put it in an oscillator circuit. Then you'd tune for maximum signal in the receiver (it would be a strong signal, since it was locally generated), and then your receiver would be tuned to the desired frequency. Not useful if you had a lot of favorite frequencies, since crystals for specific frequencies were not cheap, but handy if you regularly wanted to tune to a certain frequency.

I don't think that's what you have, but it is a possibility.

Michael

Many of us grew up using the HQ180A -- but learning how to
FEEL the bands. You get to the point where you can mark off
5 khz segments in your mind with your eyes closed. Don't just
rely on the bandspread, which as correctly noted is calibrated for
the amateur bands. Get to know the receiver by making note of
major stations (Prague 7.345, Moscow 7.180, etc) and knowing how
far you have to turn the knob for each 5 khz distance.....

It's used to calibrate your dial so you may find stations according
to dial position references on the scale.

Easy to use, but at this age, it may need to be calibrated itself.
There's a strip on the back that permits access to alignment adjustments.

When the radio is in alignment, the crystal calibrator will inject a
signal every 250khz. This will also beat against existing signals. But
you can pretty much figure out which is which. Stations will have
modulation.

Turn the crystal calibrator on. Set the bandspread dial at O. Spin
the dial until you're at the tick mark closest to the frequency you're
trying to find. Tune to zero beat. Turn the crystal calibrator off.

You're now calibrated for plus or minus 100khz and you may dial in
the desired frequency reading the main dial frequency, and adding or
subtracting the requisite number of kilohertz which are read on the
bandspread dial.

For example: To find 7.415, turn on the crystal calibrator, set the
bandspread to "O", tune the main dial to 7.5 until you're at zero beat.
Turn off the calibrator, dial the bandspread backward 85khz to 7.415.

If you have reasonably clean reception, you can use WWV to align the
receiver on the SW bands, and a broadcast station of known frequency on
each of the MW band. Takes about 20 minutes to do a good job. And it's
worth the effort. When properly aligned, dial calibration is
surprisingly good.

I like the idea of the physical contact between the radio & the
operator. Having a very good ear, eye, touch and lots of patients.
This make old radios a lot of fun to work with.

A radio that does everything for you maybe accurate but very boring.
The main reason why I have a Icom R75 is because I like to keep up with
radio technology. Although I am sure their are even better radio out there.

But on the other hand, I had always had a thing about antiques, even
older computers like mainframes.

The way things are going today I would not be suppries if they invented
something that would watch tv for the user or listen to the radio for
the user. LOL!

When I operated my HQ180AC, I kind of put myself back in time. In some
ways older radios seem to be more alive.

However, when frequency counters was invented, it probably was a very
big thing during major communications in air/sea.

BTW who & which was the first radio to have a frq counter?

Actually, Pogo has a line of products that do just that. Up to 70+
hours depending on the size of the flash card and bit rate.

They will keep you warm at night, that's for damned sure. The
rectifiers on the PS for my BC-794 will keep your feet warm from half a
yard away.

> However, when frequency counters was invented, it probably was a very

Frequency counter? or Digital readout. Frequency counters came much
later, but digital readout, or at least numerical readout, is widely
believed to be National, with the HRO series.

Frequency counters showed up in some of the most unexpected places.
Like Panasonic's RF-3100. That was quite the surprise in a receiver of
that price level.

Actually, the first transmitters were little more than high powered Tesla coils, that resonated using foiled glass sheets with a large towering coil, excited by a spark gap. Frequency range was barely above the audio. Wavelengths were VERY long. Hundreds, sometimes thousands of meters. And the signal was pretty broad, even though it was keyed on and off. Finding an signal wasn't tough. It went half way up the band. But then, there was no one on the bands then. It didn't matter.

As more signals went on the air and interference became an issue, and technology was evolving, narrower signals were possible. Better reception hardware was hitting the market with greater selectivity. Audio frequency modulation became possible, and higher frequencies were within reach. As wavelenghts became shorter, propagation characteristic differences became noticeable. Distinguishing between the different wavelength classes, became necessary, and where once there had only been signals of long wavelength, now there were signals of medium wavelength possible. Actually called Broadcast or Standard Broadcast at the time.

Of course this is all highly oversimplified. But to directly answer your question, the reason they call shortwave 'shortwave' is because the operating carrier wavelength is shorter than what had been previously common. Pretty simple nomenclature.

More technical types and government agencies call it "HF" for High Frequency."

If you're really interested in the history of the technology, and understanding how and why some of the things that have been done have been done, see if you can pick up a copy of The Radio Engineering

Handbook, by Henney. It will take you back to the very early days. What we consider today to be the Dark Ages of technology, were actually more than quite sophisticated, and many of the tools of those very earliest of days are still in use, widely, today, using updated circuitry.

With the exception of Harry Olson's stark departure from established thinking, at RCA, a lot of the hardware is still being used in the form of it's original conception, only with updated materials, and components. Condensor mics, which many assume are a late development, actually date back to very early days and work today exactly as they did then. Mixers, metering even the way audio is recorded and managed is done with the same tactile components as audio was manipulated in the 20's. Even though the technology has dramatically changed, the human interface components are the same. Digital recording, for instance still has the Start/Stop buttons, as well as Play, Record Interlock, and even Fast Forward and Rewind, all of which date from the days of Poulson's wire recorder. The Playback and Record interlocks are actually relics of the acoustic cylinder recording/playback system when sound was written on wax.

Olson invented the Ribbon, or Velocity, microphone. Which today, even today, still has a remarkable warmth on the human voice that even the best condensors can't duplicate. Olson also quantified and defined the science of acoustics, as well as the science by which good sound can be captured and broadcast on Radio. Using principles developed by A.G. Bell. Stereo, more accurately Binaural, sound transmission was discovered by Bell, while trying to develop an assistive listening system for the hard of hearing at theatres.

But I digress. It really is a fascinating and often serendipitious history, with receiver technology more or less blazing the path by which industry technology and standards developed. And you sound like you've got an appreciation for it. Good for you. Vintage texts, handbooks and references, will get you very close to the truest heart of what Radio is, and how it came to be the amazing technological wonder that it is.

They will not, however, explain how it has become the wasteland it is today.

For that you will need to expose yourself to the ravings of Satan. Or call the request line at any Clear Channel or Infinity station.

>
> http://www.splcenter.org/intel/intelreport/article.jsp?aid=556
form the above link quote

On appeal, the defendants argued that the content of the posters and
Web site were protected speech under the First Amendment. But the full
Ninth Circuit Court of Appeals upheld ACLA's liability, finding that
the content on the posters and Web site constituted an unprotected true
threat.

The court defined a true threat as a statement made when a "reasonable
person would foresee that the statement would be interpreted by those
to whom the maker communicates the statement as a serious expression of
intent to harm." [See Planned Parenthood, 290 f.3d at 1074, 1088.] The
test is an objective one; the defendant does not have to actually
intend to, or be able to, carry out the threat. [Id. at 1076.] In the
Planned Parenthood case, the Ninth Circuit found that it was reasonable
for ACLA members to foresee that the named abortion providers would
interpret the posters and Web site postings as a serious expression of
ACLA members' intent to harm them.

1917. OT Poll: Americans Favor Bush's Impeachment If He Lied about Iraq

Newsgroup: rec.radio.shortwave
Date: 2005-10-12 13:16:13 UTC
From: David <rickets@knac.com>
Message-ID: <u23qk1l0minrl6qj1nab5ha1sdk6fafgab@4ax.com>
Source record: 44227

By a margin of 50% to 44%, Americans want Congress to consider impeaching President Bush if he lied about the war in Iraq, according to a new poll commissioned by AfterDowningStreet.org, a grassroots coalition that supports a Congressional investigation of President Bush's decision to invade Iraq in 2003.

The poll was conducted by Ipsos Public Affairs, the highly-regarded non-partisan polling company. The poll interviewed 1,001 U.S. adults on October 6-9.

The poll found that 50% agreed with the statement:

"If President Bush did not tell the truth about his reasons for going to war with Iraq, Congress should consider holding him accountable by impeaching him."

44% disagreed, and 6% said they didn't know or declined to answer. The poll has a +/- 3.1% margin of error.

Among those who felt strongly either way, 39% strongly agreed, while 30% strongly disagreed.

"The results of this poll are truly astonishing," said AfterDowningStreet.org co-founder Bob Fertik. "Bush's record-low approval ratings tell just half of the story, which is how much Americans oppose Bush's policies on Iraq and other issues. But this poll tells the other half of the story - that a solid plurality of Americans want Congress to consider removing Bush from the White House."

Impeachment Supported by Majorities of Many Groups

Responses varied by political party affiliation: 72% of Democrats favored impeachment, compared to 56% of Independents and 20% of Republicans.

Responses also varied by age and income. Solid majorities of those under age 55 (54%), as well as those with household incomes below $50,000 (57%), support impeachment.

Majorities favored impeachment in the Northeast (53%), West (51%), and even the South (50%).

Support for Impeachment Surged Since June

The Ipsos poll shows a dramatic transformation in support for Bush's impeachment since late June. (This is only the second poll that has asked Americans about their support for impeaching Bush in 2005,

despite his record-low approval ratings.) The Zogby poll conducted June 27-29 of 905 likely voters found that 42% agreed and 50% disagreed with a statement virtually identical to the one used by Ipsos Public Affairs. (see footnote below)

Ipsos 10/8-9
Zogby 6/27-29
Net Change

Support Impeachment
50% 42% +8%
Oppose Impeachment
44% 50% +6%
Impeachment Margin
+6% -8% +14%

After the June poll, pollster John Zogby told the Washington Post that support for impeachment "was much higher than I expected." At the time, impeachment supporters trailed opponents by 8%. Now supporters outnumber opponents by 6%, a remarkable shift of 14%.

Support for Clinton Impeachment Was Much Lower

In August and September of 1998, 16 major polls asked about impeaching President Clinton (http://democrats.com/clinton-impeachment-polls). Only 36% supported hearings to consider impeachment, and only 26% supported actual impeachment and removal. Even so, the impeachment debate dominated the news for months, and the Republican Congress impeached Clinton despite overwhelming public opposition.

Impeachment Support is Closely Related to Belief that Bush Lied about Iraq

Both the Ipsos and Zogby polls asked about support for impeachment if Bush lied about the reasons for war, rather than asking simply about support for impeachment. Pollsters predict that asking simply about impeachment without any context would produce a large number of "I don't know" responses. However, this may understate the percentage of Americans who favor Bush's impeachment for other reasons, such as his slow response to Hurricane Katrina, his policy on torture, soaring gasoline prices, or other concerns.

Other polls show a majority of U.S. adults believe that Bush did in fact lie about the reasons for war. A June 23-26 ABC/Washington Post poll found 52% of Americans believe the Bush administration "deliberately misled the public before the war," and 57% say the Bush administration "intentionally exaggerated its evidence that pre-war Iraq possessed nuclear, chemical or biological weapons."

Support for the war has dropped significantly since June, which suggests that the percentage of Americans who believe Bush lied about the war has increased.

Passion for Impeachment is Major Unreported Story

The strong support for impeachment found in this poll is especially surprising because the views of impeachment supporters are entirely absent from the broadcast and print media, and can only be found on the Internet and in street protests, including the large anti-war rally in Washington on September 24.

The lack of coverage of impeachment support is due in part to the fact that not a single Democrat in Congress has called for impeachment, despite considerable grassroots activism by groups like Democrats.com (http://democrats.com/impeach).

"We will, no doubt, see an increase in activism following this poll," said David Swanson, co-founder of AfterDowningStreet.org. "But will we see an increase in media coverage? The media are waiting for action in Congress. Apparently it's easier to find and interview one of the 535 members of Congress than it is to locate a representative of the half of the country that wants the President impeached if he lied about the war. The media already accepts that Bush did lie about the war. We know this because so many editors and pundits told us that the Downing Street Memo was 'old news.' What we need now is journalism befitting a democracy, journalism that goes out and asks people what they really think about their government, especially George Bush."

The passion of impeachment supporters is directly responsible for the new poll commissioned by After Downing Street. After the Zogby poll in June, activists led by Democrats.com urged all of the major polling organizations to include an impeachment question in their upcoming polls. But none of the polling organizations were willing to do so for free, so on September 30, AfterDowningStreet.org posted a request for donations to fund paid polls (http://afterdowningstreet.org/polling). As of October 10, 330 individuals had contributed $8,919 in small donations averaging $27 each.

AfterDowningStreet.org has commissioned a second poll which is expected soon, and will continue to urge all polling organizations to include the impeachment question in their regular polls. If they do not, AfterDowningStreet.org will continue to commission regular impeachment polls.

Footnotes:

1. AfterDowningStreet.org is a rapidly growing coalition of veterans' groups, peace groups, and political activist groups that was created on May 26, 2005, following the publication of the Downing Street Memos in London's Sunday Times on May 1. The coalition is urging Congress to begin a formal investigation into whether President Bush committed impeachable offenses in connection with the Iraq war.

2.Here are the complete tables from the Ipsos Public Affairs poll, plus the definitions of regions used by Ipsos and the U.S. Census Bureau.

3. Zogby asked: "If President Bush did not tell the truth about his reasons for going to war with Iraq, Congress should consider holding him accountable by impeaching him through impeachment."

4. Pollsters have offered various reasons for refusing to poll on impeachment. For example, Gallup said it would do so "if, and when, there is some discussion of that possibility by congressional leaders, and/or if commentators begin discussing it in the news media."

I beileve both use 4 AA batteries so the voltage output should be the
same. The only question would be polarity of the connector, but that
should be standardized within Sony products.

Clerical fascism is an ideological construct that combines the political and economic doctrines of fascism with theology or religious tradition. The term has been used to describe organisations and movements that combine religious elements with fascism, support by religious organisations for fascism, or fascist regimes in which clergy play a leading role. For Catholic clerical fascism, the term Catholic integralism is sometimes used, though Catholic integralism does not necessarily go together with fascism.

Examples of dictatorships or political movements involving elements of clerical fascism include those of Antonio Salazar in Portugal, Engelbert Dollfuss in Austria, Jozef Tiso in Slovakia, Ante Pavelic and the Ustashe in Croatia, Miklos Horthy in Hungary, the Iron Guard movement in Romania, and the government of Vichy France. The regime of Francisco Franco Bahamonde in Spain had nacionalcatolicismo as part of its ideology. It has been described by some as clerical fascist, especially after the decline in influence of the Falange beginning in the mid-1940s. With the exception of the Croation Ustashe movement, scholars debate which other examples in this list should be dubbed, without reservation, clerical fascist.

Some scholars consider certain contemporary movements to be forms of clerical fascism, including Christian Identity and possibly Christian Reconstructionism in the United States; some militant forms of politicized Islamic fundamentalism; and militant Hindu nationalism in India (Rashtriya Swayamsevak Sangh / Bharatiya Janata Party).

I wouldn't go that far, but there are quite a few rabid Nationalists and/or Christians who will take offense.

It must have been an amazing thing to listen to the airwaves during WWII. The posturing, the carefully chosen words, the tirades - it had to have been a frightening, fascinating experience. Bring back those good old days! ;-)

Once I worked in a place that had a metal frame that prevented any
reception. I wired my radio to the metal frame itself and got great
reception.

Right, John, polarity would be the issue. I believe that it was between the ICF-SW7600 and the ICF-SW7600G that Sony made a switch on the polarity of the required AC adapters from pos-out/neg-in to neg-out/pos-in.

1950. Re: Sony's AC power adaptor

What's well documented is his intention to invade Iraq from as far
back as 1999. The ''bad data'' was heavily footnoted and he picked
the data that supported his desire to invade and ignored all the other
data which did not.

He is an evil bastard and must be removed from office before he
murders more Americans.

I own a couple of power adapters and they have a slide switch for the proper voltage (from 1.5 up to 9 or 12 volts) and a bunch of different sizes of removable plugs and the plugs can be removed and reversed for the proper voltages.Wal Mart and Radio Shack and K-Mart and electronic supply and similar stores sells them.

Yeah, the 7600GR would definitely have this specified next to the AC jack. As for the adapter, well, I dunno. My '2010 adapter (from the late '80's) doesn't have polarity info displayed (or maybe it rubbed off, if it was on the outward facing side).

The first one I ever saw was the HRO-500, with its mechanical dials that
gave numeric readout. I always wondered how accurate those dials were;
somehow I never scrounged the money to buy one.

...and how do you know they don't go to other countries? (Didn't Arafat go to France? And yeah, I know, he's dead. But our Puppet Boy, the Shah of Iran came here and he's dead too). But, that's not the question.

> I have no complaints.

Nor do I. But that *wasn't* the question either.

Again, you've been asked what time it is and you have responded by telling how to make a watch (still without saying what time it is).

To refresh your memory, my original question is shown below:

Carter-K8VT wrote:

> I seem to recall that, per the generally accepted way *overall* medical
> performance is measured in many categories, we are about 17th or 18th in
> the world. (Please don't just single out one or two diseases--address
> *all* categories and tell me where/why you believe the survey is wrong).
> Also, a few weeks ago it was announced that for the *5th* year in a row,
> our infant mortality has gotten worse, rivaling (or worse than) some
> Third World countries.

These are actual statistics. These were compiled by organizations that gather such data. They say we are not number one-nor are we in the top 5-nor are we in the top 10. Please state why you think these organizations and the actual data is wrong. Lying? Commie pinko preverts?--(a tip o' the hat to "Dr. Strangelove"--no spelling police, please).

Sort of like Henny Youngman, 1937:

Q: How do you like your wife?

A: Compared to what?

And that is the point: we live here and most people have no way to compare with the rest of the world. That is where the surveys become useful.

So, no dodging, now. Please stay focused and try to answer the specific question: Where-or why-you believe the data is wrong.

But that dial was used on the HRO series forever, ie going back to the
thirties or so. It was a turns counting dial. Of course, the earlier
models were not linear tuning, so you had to have a chart to link
frequency with the numbers on the dial. But it was more resettable
than most receivers of the era. I can't remember if the last of
the models, the HR0-60, did make the readout exact.

The HRO-500 had the advantage that it the dial tuned a fixed 500KHz
range, unlike the previous receivers in the line that covered all
kinds of ranges and frequency, so the actual oscillator could be made
to tune linearly, and hence the numbers on the dial directly read the
frequency.

This is no different from the R390, again it tuned a small and fixed
range of frequency, which had a mechanically digital tuning dial. As long
as the oscillator was indeed linear, ie 1 turn of the dial tuned the
same amount throughout the range of the oscillator, you did have
a direct reading dial. Other receivers of the late fifties and into
the sixties had similar tuning schemes, they simply didn't have a digital
readout.

I have an email (one among many) from a few years ago from a married Irish woman in Bognor Regis,England.(she,her dad and her hubby are Irish and originaly from Ireland) Her dad went to Ireland to visit some of his old friends.(Limerick area) Almost as soon as he got to Ireland,he was in Dooradoyle Hospital,Limerick.His prostate gland was swollen up and was about to burst.The "doctor" in Bognor Regis had told him it was ok to visit Ireland.The people at Dooradoyle Hospital said they couldn't understand why his doctor in Bognor Regis told him he could visit Ireland,he was in terrible shape.There are just as good and in some cases perhaps even better doctors in Europe as there are in America.It is a good thing her dad did visit Ireland,that trip over there saved his life.

BpnJ - " there are quite a few rabid Nationalists
and/or Christians who will take offense. "
.
Why shouldn't they when DaviD make a Proclamation like :
" Because this Newsgroup has more Nazis concentrated
in one place than any other place I visit. "
.
BpnJ - Should I sit quietly (be silenced) for :

* Loving My Country and wishing to defend it when DaviD
attempts to denigrate the USA and disparage his fellow Americans.

* Loving God and Having Faith when DaviD attempts to
Attack God and belittle Persons-of-Faith.

But to DaviD's Eyes (Way of Thinking) if you Love your
Country and Love God and are willing to Stand-Up for
both; then He calls you a NAZI.

BpnJ - From your above statement : I would appear
that you 'politely' state and hold those same feelings.

not a nazi - just love my country and my god and
willing to speak-up and defend both - amen ~ RHF

>BpnJ - From your above statement : I would appear
that you 'politely' state and hold those same feelings.<

RHF - I don't think anyone here is a Nazi - that is a term that implies very evil things that I think nobody here espouses; but I do think there are US citizens on this newsgroup who are absolutely unwilling to look critically at their own nation (and by this I largely mean its representative collection of politicians, traditions, place in the world and social characteristics) to see where it is ethically strong and where it is ethically weak, and where it could realistically be improved without sacrificing our national identity or security. I think our nation is full of these people on all sides. I think people decide to take sides and hold those sides based on one or two or ten positions related to foreign policy or social issues or religion or the environment or what-have-you, often not because there is anything inherently right about those positions but simply because they are traditional or convenient or easy or profitable.

Just because we are the United States does not make us perfect, does not make us 100% uniformly right and does not make us the chosen nation of God. A nation with a real conscience is going to recognize that fact and be willing to periodically examine itself to see if it can be even better, to see what tweaks need to be made in light of social conditions, in light of resource availability, in light of international conditions and in light of technology and its spread. The US is a powerful enough nation that it can easily afford to do self-checks once in awhile to try to be better.

The problem is that we have not done this in any real way. In our defense, few other nations have done this either - but as a world leader who relishes its leadership (and as a potential world pariah) we have an obligation, to ourselves if nobody else, to be critical of ourselves and be willing to consider where we are going in a changing world.

...But we have not done this. Like David, I think that is sad and ultimately may be harmful to the United States. You may criticize me for wanting to be rebellious instead of patriotic, but I think it is not only an incorrect characterization of my position, and but also a primitive and ultimately potentially self-destructive way of thinking. I want our nation to not only be a great place to live, but to also be considered worthy by others of their respect.

Congress took the information Bush presented. Kerry said at the time "This is no time for partisan bickering, let's all get behind the president" or words to that effect. When he found out they had been duped, Kerry said "If I had known then what I know now, I wouldn't have supported the war". Conservatives have spun the whole thing in order to score gotcha points. Dittoheads will spin any story in order to throw the "flip-flop" bomb, ignoring that Dubbya is the master of the flip-flop (examples supplied on request). But the American people are not fooled.

Bush's approval ratings continue to tank. Not just for the war but for everything he's touched.

Greg

How stupid. That's just the same as asking "If David Rickets commits murder and mayhem in downtown LA, the State of California should hold him accountable and send him to prison."

Purely hypothetical, as is the original question in the poll.

How freaking lame.

yes dxace there is and i have logged that. in my original post i meant
404Khz not 408Khz. sorry again. i'll try again tonight - it is possible
i copied wrong and am actually picking up UTX out of jupiter florida.

thanks again, john
